ALAN P. BALUTIS, DIRECTOR, BUDGET, PLANNING AND ORGANIZATION

MARK E. BROWN, DIRECTOR, OFFICE OF BUDGET

Mr. SMITH. This afternoon we have the Secretary of Commerce. I know that other members are due here in a minute but I think we should get started.

The total request for the department is $2,548,475,000, and that represents a reduction of a little over $1 billion. That is primarily because we don't have the cyclical census expenses we had last year.

We will insert the Department of Commerce Budget in Brief into the record at this point.

[The Commerce Budget in Brief and other summary materials follow:]

FOREWORD

The Department of Commerce is requesting $2,544 million in 1991, a decrease of $1,004 million from the FY 1990 enacted appropriation. The 1991 Commerce budget will support essential mission requirements to expand trade programs, conduct periodic censuses, improve economic data, automate the patent and trademark process, improve research for standards used by American industry, expand coastal ocean research and climate prediction capabilities, modernize and restructure the National Weather Service, and reinvigorate the Minority Business Development Agency.

The purpose of THE COMMERCE BUDGET IN BRIEF is to provide a summary of the President's annual budget request to Congress for Commerce by highlighting the budget request for FY 1991 and the changes from FY 1990. The major portion of the document furnishes information on appropriation accounts for which there are budget requests for FY 1991, or for which an appropriation was enacted in FY 1990.

The document presents for the Department, and for each program area, tables comparing permanent positions and amounts appropriated for FY 1990 and the estimate for FY 1991. For each appropriation account, data are presented on permanent positions and amounts by activities; for each activity, FY 1991 program changes from FY 1991 base requirements are briefly identified and explained. For purposes of tracking changes from FY 1990 to FY 1991 in the bureau description material, the FY 1990 appropriation is used as the base. The bureau description section starts on page 13.

The tables for each appropriation contain information substantially the same as the "Summary of Requirements" (salmon sheet) in the budget justification material submitted to the Appropriations Committees. Page references are made to the budget justifications.

The document includes information on budget authority, outlays and employment. This information will be useful to the general public in understanding the total program of the Department. The document also provides information on the Department's mission and objectives and FY 1991 budget requests requiring authorizing legislation.

INTRODUCTION

ORIGIN

The Department of Commerce was established on March 4, 1913 (37 Stat. 7365; U.S.C. 1501). Previously, labor and commerce activities had been performed by the Department of Commerce and Labor established by the Act of February 14, 1903.

COMMERCE GOALS

America's trade position and technological supremacy are now being challenged, and our competitors are aggressively pursuing their own interests as the world has become "a global marketplace." To compete successfully during the coming decades, the United States must offer the best products and services possible at the lowest costs. We must do "the right thing right the first time."

The nation can do this by providing higher quality products and services; making the most of human resources through greater educational opportunities; removing legal barriers that diminish our industries' competitiveness; increasing companies' opportunities to extend their longer-term vision by lowering the costs of capital; speeding up the commercialization of new technologies, linking environmental to competitive goals; and, promoting free trade and market-based economies.

Secretary Mosbacher has established a set of goals for meeting these needs. Those goals that have been designated part of President Bush's Management by Objectives program and are monitored by the Office of Management and Budget are listed below with an asterisk.

- * Define, enunciate, and implement the U.S. Government's role in export development.
- * Improve the U.S. trade position through securing freer and fairer trading conditions in international negotiations.
- Improve operations of the U.S. and Foreign Commercial Service.
- Operate a balanced export program for the nation that safeguards national security while reducing barriers to increased overseas sales.
- * Encourage national investment in research and development to meet national needs such as improving productivity and competitiveness.
- Establish a Total Quality Management Environment in the Department of Commerce.

Approved Date

Amendment 23
September 7, 1989

- Provide data and information products and services to support governmental policy and meet public needs, including conducting a fair, accurate, and efficient 1990 decennial census on time.
- Improve the ability of the National Weather Service to provide better forecasts and warnings for public safety.
- Support a vigorous national effort to manage better our ocean and coastal environment through better understanding, monitoring, and prediction.
- Reinvigorate the Minority Business Development Agency.

FY 1991 BUDGET REQUEST

For FY 1991 the Department of Commerce requests a budget of $2,544 million, a decrease of $1,004 million from the FY 1990 appropriations to date. The principal reason for this reduction is the Department will have completed collecting data for the 1990 census. The FY 1991 budget request continues the 1990 Gramm-Rudman-Hollings Act across-the-board cuts to selected bureaus within the Commerce appropriation.

The Department seeks to cut or reduce programs whose missions have been achieved, activities that the private sector or state or local governments could provide better, and programs that have proven ineffective or are a low priority given fiscal constraints. The Department believes reducing specific programs is better than continuing across-the-board reductions on many high priority programs to meet deficit targets.

The Department proposes to eliminate or reduce the following Commerce programs in FY 1991:

- Economic development assistance programs.
- Public telecommunications facilities grants.
- Trade adjustment assistance for firms.
- Certain grants which subsidize the activities of specific industries.
- Certain revenue sharing arrangements with state and local governments.

These reductions, in addition to other program reductions, total $336 million. In addition to a $993 million reduction for the 1990 Census the Department needs $53 million to maintain the current level of services for programs not being reduced. The Department also requests an additional $271 million for program increases. The major requested increases are listed below.

Define, enunciate, and implement the U.S. Government's role in export development and improve the U.S. trade position through securing freer and fairer trading conditions in international negotiations.

- Additional funding is requested for the International Trade Administration (ITA) to further carry out provisions of the Omnibus Trade and Competitiveness Act of 1988. Additional resources are needed to process an increasing number of antidumping and countervailing duty cases as well as annual reviews of the final determinations of these cases.
- The Department is requesting additional funds to expand the foreign staffing of the U.S. and Foreign Commercial Service (US&FCS) in key overseas markets to support priority trade policy initiatives such as: 1) assisting U.S. exporters to take advantage of the European Community's establishment of a single internal market; 2) helping U.S. businesses take advantage of opportunities provided by the U.S.-Canada Free Trade Agreement; 3) promoting U.S. exports to Japan and other Pacific rim countries to build upon gains made by the U.S.-Japan structural impediments initiative, particularly the Japanese Government's commitment to undertake an import promotion program, and; 4) improving intellectual property rights protection in Latin American and Pacific rim countries.
- Additional resources are needed so ITA can support the Administration's initiative to negotiate an international consensus on steel trade practices and meet shorter deadlines for processing requests to import steel due to short supply.
- The Department also requests additional resources so ITA can support market reforms and increase U.S. business participation in the economies of East Europe and the Soviet Union.

Improve operations of the U.S. and Foreign Commercial Service.

- To ensure that it is providing the best service it can with available resources, the US&FCS will assess the allocation of its foreign and domestic resources. The Department requests additional resources for one year so the US&FCS can more effectively allocate its district office staff.
- Additional resources are needed to provide adequate security for overseas Foreign Commercial Service staff.
- The Department also requests additional resources so the Commercial Information Management System (CIMS) can provide information on export opportunities and foreign markets to U.S. businesses.

Operate a balanced export program for the nation that safeguards national security while reducing barriers to increased overseas sales.

- Increased funding will permit the Bureau of Export Administration (BXA) to maintain exporter assistance staff in Boston, Portland, and Northern California to help U.S. exporters follow export control regulations.

- Additional staff will allow BXA to review the Commodity Control List more frequently; help more exporters determine correct commodity classifications; and undertake reports required by the 1988 Trade Act, including reviewing the export control policies our major allies.

- Additional BXA staff are provided to analyze the effects on the U.S. industrial base of Defense Department Memoranda of Understanding (MOUs) on defense trade with other defense ministries and foreign offsets, and to ~~analyze the~~ effect on national security of foreign investment in defense-related industries.

Encourage national investment in research and development to meet national needs such as improving productivity and competitiveness

- This Administration intends to keep U.S. industry on a competitive footing in the global markets. The budget for the National Institute of Standards and Technology (NIST) requests substantial increases for core NIST research programs such as light wave technology, advanced semiconductor measurement issues, and robotics. These research programs form the technical basis for NIST's development of measurements and standards on which U.S. industries depend. Funding is also continued for the Manufacturing Technology Centers and the Advanced Technology Program.

- Developing technical assessments and policies that will help to efficiently introduce high definition television (HDTV) to the U.S. market is a high priority. The National Telecommunications and Information Administration (NTIA) needs additional resources to expand research that will provide information needed for the adoption of an HDTV transmission standard by the Federal Communications Commission.

- The prompt examination, registration, and dissemination of patent and trademark applications continue to be important in promoting American industrial and technological progress. In 1989, the Department achieved its goal of processing patent applications in an average of 18 months. In FY 1991, additional resources, primarily funded through user fees, are requested to handle projected increases in the number of patent and trademark applications and to disseminate issued patents and trademarks more effectively.

Establish a Total Quality Management Environment in the Department of Commerce.

- The Department will establish a Secretary's Quality Award for Commerce organizations, develop quality management plans by each bureau to be monitored through the Management by Objectives (MBO) process, and form a Commerce Quality Council chaired by the Deputy Secretary.

Provide data and information products and services to support governmental policy and meet public needs and take a fair and accurate census in 1990.

- The FY 1991 budget for Economic Affairs, which includes the Census Bureau, provides resources to process data collected by the Decennial Census. The Department must deliver apportionment counts to the President by December 31, 1990, and the Federal Government must provide the states data for redistricting on April 1, 1991.
- A series of initiatives are proposed to expand data collection and improve economic analysis used by key government decision-makers. Additional funds are requested to improve and expand data collection for business statistics, manufacturing statistics, foreign trade statistics, and general economic statistics. Also proposed are funds to improve demographic statistics, to modernize the Current Population Survey processing system, to restore the Survey of Income and Program Participation sample size and panels, and provide additional data sources for the National Trade Data Bank.
- Funds are requested for implementation of the principal recommendations of the Economic Policy Council's working Group on Improving Economic Statistics, to maintain the quality of the GNP and balance of payment estimates, to modernize and extend the U.S. national economic accounts and to improve the quality of international investment data.

Improve the ability of the National Weather Service (NWS) to provide better forecasts and warnings for public safety.

- The National Oceanic and Atmospheric Administration (NOAA) budget requests additional resources to continue the NWS modernization program. Full production and deployment of the Next Generation Radar units will continue. NOAA will continue modernizing its equipment to serve the country's weather observing and forecast needs into the next century.
- Additional resources are also needed to continue procuring replacement meteorological satellites, a necessary part of a modernized Weather Service. Combined with the other systems being developed and deployed by NOAA, they will provide the NWS with the data to improve forecasts and warnings.

- The FY 1991 budget continues the Secretary's commitment of last year to maintain existing operations at weather stations.

Support a vigorous national effort to manage better our ocean and coastal environment through better understanding, monitoring, and prediction.

- The Administration's FY 1991 budget builds on the FY 1990 initiative in coastal ocean science. This endeavor is aimed at improving our understanding of the ocean's processes and capacities in the areas around the coasts of the United States. Information and research in this area will give the country's policy-makers better technical information when considering issues such as pollution, coastal development, and proper management of marine life.

- The Department is one of several agencies involved in the Federal Climate and Global Change Program. This Federal effort is coordinated through an interagency group, the Committee on Earth Sciences, sponsored by the President's Office of Science and Technology Policy. The Department, through NOAA, plays a crucial role in the monitoring of and research on climate change. Additional resources are necessary for the United States to address this issue adequately.

- Funds are provided for the launch of the LANDSAT-6 satellite. No funds are provided for the operation of the LANDSAT-4 and LANDSAT-5 satellites since the Department expects their operation to end in FY 1990. No funding is requested for satellites beyond LANDSAT-6 since the National Space Council is evaluating options for the future of the system.

Reinvigorate the Minority Business Development Agency (MBDA).

- Reinvigorating the Federal Government's assistance to minority businesses is a top priority for the Administration. The Department will focus on developing both public and private sector programs and formulating policies and guidelines for the minority Business Development Center (BDC) network. Additional resources will upgrade and strengthen MBDA's program to improve the quality of services provided and better meet the needs of local business communities.

- Additional resources will also strengthen MBDA's Resource Development program's partnership with state and local governments and the private sector. MBDA will work with these groups to provide assistance to minority businesses.

- Additional resources are requested to expand MBDA's advocacy, outreach, and research programs in order to offer better support for MBDA's enterprise and resource development activities and users of MBDA's services.

USER FEES

- o In developing the FY 1991 budget a central concern of the Department was that those who benefit from the Department's programs pay their fair share of the costs of running the programs. As a way to maintain services that benefit the U.S. while holding down the Federal budget deficit, we are proposing several new user fees.

- o The U.S. Travel and Tourism Administration (USTTA) will continue to pursue a travel promotion fee to be assessed on airline and cruise ship carriers. Funds collected by this fee will go directly to the Treasury to reduce the Federal deficit and will not be used to reduce USTTA's appropriation.

- o Beginning in FY 1991, a transfer from the Harbor Maintenance Trust Fund will offset $45.5 million of the cost of NOAA's programs. The fund will provide resources for mapping and charting, tides and circulation, and marine weather programs. The Department, in conjunction with the Army Corps of Engineers, is developing a legislative proposal to increase the current user fee which will support the transfer.

GENERAL ADMINISTRATION

General Administration provides salaries and expenses for the Secretary, Deputy Secretary and staff of the Office of the Secretary and is the central management and administrative control point for budgetary and policy functions affecting Department goals and objectives. The Office of the Secretary is also the primary liaison to the Office of Management and Budget and responds to executive branch and Congressional inquiries.

The Office of the Inspector General conducts audits, inspections and investigations to combat fraud, waste and abuse of Departmental resources, and to improve the efficiency and effectiveness of Commerce programs.

Summary

Appropriation

	1989	1990	1991 Estimate	Increase (Decrease)
FEDERAL FUNDS:				
Appropriation:				
Salaries and expenses	$26,396	$27,821	$30,326	$2,505
Inspector general	14,008	13,331	15,115	1,784
TOTAL APPROPRIATION:	40,404	41,152	45,441	4,289

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
General Administration				
Office of Space Commerce (GA-26)	5	$387	+1	+$100

Enhance coordination of space activities Departmentwide, and improve information dissemination to industry on key commercial space issues including foreign competition and industry trends.

Management & information systems (GA-27)	28	2,702	+3	+381

Expand oversight activities for major Commerce information systems including: research to identify cost effective alternative system configurations; identification of total life-cycle costs; and demonstration projects.

Office of Finance and Federal Assistance (GA-27)	30	2,352	+1	+117

Strengthen Departmental financial management controls including development of an integrated, Departmentwide Financial and Management Information System.

Procurement and administrative services (GA-26)	56	5,009	+3	+391

Enhance procurement oversight functions, including on-site reviews and coordination of major systems acquisitions planning.

Inspector General				
Office of Audits (GA-59)	131	8,698	0	+517

Improve the quality and timeliness of audits by hiring part-time and temporary staff with education and experience in: management and computer science; industrial, systems and software engineering; and economics.

Office of Inspections and Resource Management (GA-55)	28	1,951	+5	+390

Expand inspections of U.S. and Foreign Commercial Services (U.S. and FCS) field operations.

ECONOMIC DEVELOPMENT ADMINISTRATION

The objectives of the Economic Development Administration (EDA) are to reduce substantial and persistent unemployment in economically distressed areas and to address problems of economic adjustment. The Administration proposes to terminate EDA programs in FY 1991 and to stimulate economic expansion and job creation in distressed areas through general tax, fiscal and regulatory reduction measures. In FY 1991, EDA and other grants and loans programs proposed by the Administration for termination will be merged in the Office of Grants and Loans Administration to facilitate closeout of these programs.

Summary

Appropriations

	1989	1990	1991 Estimate	Increase (Decrease)
FEDERAL FUNDS:				
Appropriation:				
Grants and loan administration	$24,742	$25,356	$20,000	($5,356)
Economic development assistance programs	182,028	188,556	0	(188,556)
TOTAL APPROPRIATION:	.206,770	213,912	20,000	(193,912)

Permanent Positions

	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Grants & loan administration	325	360	160	(200)

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base Perm. Positions	Base Amount	Increase/(Decrease) Perm. Positions	Increase/(Decrease) Amount
Grants and Loans Administration (EDA-3)	360	$26,605	200	-$6,605

Economic development programs will be discontinued in FY 1991. Administrative resources will be used to monitor and close out Departmental programs including: existing economic development grant and loan programs, Trade Adjustment Assistance (transferred to EDA in FY 1988), Public Telecommunications Facilities Program, Federal Ship Financing Fund, and Fisheries Loan Fund.

	Base Perm. Positions	Base Amount	Increase/(Decrease) Perm. Positions	Increase/(Decrease) Amount
Economic development assistance programs (EDA-18)	0	196,475	0	-196,475

The Administration proposes termination of EDA during FY 1991 as part of its policy of placing emphasis on the private sector and transferring primary responsibility for administering community and economic development assistance to State and local governments to resolve economic development problems.

BUREAU OF THE CENSUS

The Bureau of the Census collects, compiles and publishes a broad range of current and periodic statistics including economic, social and demographic data on population, housing, agriculture, governments, foreign trade, manufacturing, construction, mineral industries, and retail, wholesale, and service trades. The Salaries and Expenses appropriation provides for monthly, quarterly and annual surveys, and other programs which require a constant annual funding level. The Periodic Censuses and Programs appropriation provides for decennial and quinquennial censuses, and other programs which are cyclical in nature. Additionally, individual surveys are conducted for other Federal agencies on a reimbursable basis.

Summary

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Salaries and expenses	$96,035	$99,890	$115,233	$15,343
Periodic censuses and programs	559,316	1,314,836	316,104	(998,732)
TOTAL APPROPRIATION	655,351	1,414,726	431,337	(983,389)

Permanent Positions

Appropriation:	1989	1990	1991 Estimate	Increase (Decrease)
Salaries and expenses	2,019	2,230	2,402	172
Periodic censuses and programs	2,448	3,544	4,177	633
TOTAL:	4,467	5,774	6,579	805

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)
Salaries and Expenses

	Base Perm. Positions	Base Amount	Increase/(Decrease) Perm. Positions	Increase/(Decrease) Amount
Business statistics (CEN-30)	346	$14,820	+91	+$3,910

Increases are proposed to improve the methods of reducing non-sampling errors in the Advanced Retail Sales Survey (+19 pos.; +$1,069), to expand the collection of corporate financial data (+9 pos.; +$450) and to collect annual detail for more service industries (+23 pos.; +$1,050). Increases also will improve the measurement of services purchased by industry (+16 pos.; +$523) and the collection of small company financial data (+12 pos.; +$418). Increases are provided to identify and publish new data for specific growth industries and to assign unique industrial classification codes to these emerging industries (+12 pos.; +$400).

Manufacturing statistics (CEN-52)	240	11,237	+57	+2,450

Increases are included to improve the quantity and quality of responses to the Manufacturer's Shipments, Inventories, and Orders (M3) Survey (+24 pos.; +$900) and to conduct an annual business investment survey on new and anticipated investment data at the national level (+43 pos.; +$2,000). This will complement Census' responsibility to collect actual data on investment and business plans. Funding for the Current Industrial Reports will be reduced (-10 pos.: -$450).

General economic statistics (CEN-68)	203	11,054	+4	+575

Increases are provided to research and revise the Standard Industrial Classification (SIC) codes (+4 pos.; +$375), and finance the National Trade Data Bank required by the Omnibus Trade and Competitiveness Act of 1988 (+0 pos.; +$200).

Foreign trade statistics (CEN-80)	413	17,381	+13	+500

An increase is provided to improve the quality of foreign trade statistics through educational efforts and follow-up programs.

Agriculture statistics
(CEN-98) 14 414 -14 -414

The agriculture statistics program on cotton ginning will be discontinued.

Demographic surveys
(CEN-105) 486 29,453 +49 +2,826

Increases will modernize the Current Population Survey processing system (+15 pos.; +$826), and begin the restoration of the Survey of Income and Program Participation (SIPP) sample to its optimal size by introducing a new panel of 14,000 households (+34 pos.; +$2,000).

Demographic reports
(CEN-122) 104 3,030 +1 +250

This increase will provide a review of the Metropolitan Statistical Area (MSA) concepts and for the development of associated statistical standards.

Data Systems Development
(CEN-142) 13 592 0 -119

Fewer data system development contracts will be issued.

Periodic Censuses and Programs

Year 2000 decennial census
(Cen-200) 12 784 +11 +747

This increase will fund the early preparation and planning, including research and development for the Year 2000 Decennial Census.

ECONOMIC AFFAIRS
ECONOMIC AND STATISTICAL ANALYSIS

Economic and Statistical Analysis provides a clear picture of the U.S. economy, economic information and analyses and supports economic policy. This is accomplished through two program activities:

- Economic Analysis. Prepares and interprets the economic accounts of the U.S., consisting of the national income and product accounts, summarized by the gross national product (GNP); the wealth accounts, which show the business and other components of national wealth; the input-output accounts, which trace interrelationships among industrial markets; regional economic accounts; and the U.S. balance of payments and associated foreign investment accounts. This work is supplemented by the preparation and analysis of econometric models and a system of business indicators.

- Policy Support. Provides information and analyses on the state of the economy and matters relating to economic policy, supports the Under Secretary for Economic Affairs with statistical coordination and conducts analyses of the cross-industry effects of economic developments.

Summary

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Salaries and expenses	$32,899	$30,908	$39,948	$9,040
TOTAL APPROPRIATION:	$32,899	$30,908	$39,948	$9,040

INTERNATIONAL TRADE ADMINISTRATION

The International Trade Administration strives to increase the competitiveness of U.S. business in the world economy by promoting U.S. exports, fighting unfair foreign trade barriers, and negotiating and implementing both multilateral and bilateral trade agreements. This is accomplished through four programs:

- Trade development assesses the competitiveness of U.S. industries, conducts analyses on international trade and investment, and conducts export promotion programs directed toward specific industrial sectors.
- International economic policy assists in formulation of U.S. bilateral and multilateral trade policies, monitors the implementation of trade agreements, and assists U.S. businesses seeking to trade with specific countries.
- Import administration protects American firms from unfair trade practices by administering U.S. antidumping and countervailing duty laws, bilateral steel trade agreements, the U.S.-Canada Softwood Lumber Agreement, and the U.S.-Japan Semiconductor Agreement.
- The United States and Foreign Commercial Service provides exporting advice and export promotion services to U.S. firms through a network of offices covering 43 states and 66 foreign countries. The US&FCS develops and distributes information products and conducts trade shows and trade fairs overseas.

Summary

Appropriation

	1989	1990	1991 Estimate	Increase (Decrease)
FEDERAL FUNDS:				
Appropriation: Operations and admin.	$167,502	$178,859	$189,020	+$10,161
TOTAL APPROPRIATION:	167,502	178,859	189,020	+10,161

Permanent Positions

	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation: Operations and admin.	2,021	2,446	2,577	+131

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
Trade development (ITA-31)	551	$42,013	-15	-$4,727

The Administration proposes to eliminate the Trade Adjustment Assistance Program because it has not been effective in assisting U.S. firms to adjust to import competition (-11 pos.; -$4,543). Additional resources are provided to develop software to transmit data to the National Trade Data Bank (NTDB) and facilitate access to the NTDB by U.S. trade officials (+1 pos.; +$130). A decrease in Sectoral Analysis and Trade and Information Analysis reflects completion of the GATT's Uruguay Round (-5 pos.; -$314).

International economic policy (ITA-55)	267	18,000	-10	-327

Regional Economic Policy needs additional resources to help U.S. firms take advantage of the European Community's establishment of a single internal market (+$154) and economic reforms in East Europe and the USSR (+$100). A decrease in Management and Policy Coordination and Regional Economic Policy reflects completion of the GATT's Uruguay Round (-10 pos.; -$541). Due to lower than expected costs, Regional Economic Policy also proposes a decrease for funding of general dispute settlement panels for the U.S.-Canada Free Trade Agreement (-$40).

Import administration (ITA-81)	342	21,628	+50	+2,793

Additional resources are needed to process an increasing number of reviews of antidumping (AD)/countervailing duty (CVD) cases (+24 pos.; +$1,287). An increase is proposed to implement changes to AD and CVD laws provided by the 1988 Trade Act (+15 pos.; +$900). Resources are needed to achieve an international consensus on steel trade practices and meet shorter deadlines for processing requests to import steel due to short supply (+8 pos; $484). A decrease in Import Administration reflects completion of the GATT's Uruguay Round (-1 pos.; -$38). Additional resources are needed to process an increasing number of Foreign Trade Zone applications (+4 pos.; +$160).

U.S. and Foreign Commercial Service (ITA-115)	1,286	99,515	+106	+10,125

Foreign Operations needs additional funds to expand its commercial staff in key overseas markets for such activities as ensuring the U.S. exporters are able to take advantage of the European Community's establishment of a single internal market and opportunities provided by the U.S.-Canada Free Trade Agreement, promoting exports to Japan and other Pacific rim countries, and improving intellectual property rights protection (+107 pos.; +$7,912). Additional resources all also needed to provide adequate security for overseas commercial officers (+850). A decrease in Foreign Operations reflects completion of the GATT's Uruguay Round (-1 pos.; -$57). Export Promotion Services needs additional resources to ensure that its Commercial Information Management System (CIMS) can adequately fulfill its role as the basis for the Export Promotion Data System of the NTDB (+$850). Domestic Operations needs additional funds to more effectively allocate its district office staff (+$570).

BUREAU OF EXPORT ADMINISTRATION

The Bureau of Export Administration (BXA) enforces U.S. export controls relating to national security, foreign policy, and short supply. Drawing its authority from the Export Administration Act of 1979 as amended (EAA), BXA strives to balance economic and national security interests. BXA performs four main activities:

- Management and policy coordination develops, analyzes, and coordinates policy initiatives within the BXA.
- Export Administration is responsible for: 1) determining whether to approve or deny licenses to export goods and technical data controlled for reasons of national security, foreign policy, or short supply; 2) determining the technical parameters of goods and technology subject to control, drafting regulations, and representing BXA in numerous interagency and international fora concerned with export controls; and 3) determining whether controlled goods or technology are available overseas.
- Export Enforcement seeks to prevent and detect illegal exports of controlled goods or technology, and prosecutes firms accused of violating U.S. export control laws.
- Industrial Resource Administration under the authority of the Defense Production Act of 1950, as amended, is responsible for: 1) identifying bottlenecks in industrial production which would be critical in a national security crisis; 2) participating in the management of the National Defense Stockpile; 3) investigating whether imports of particular goods threaten U.S. national security, 4) analyzing the effects on the U.S. industrial base of Defense Department Memoranda of Understanding (MOUs) regarding defense trade with other defense ministries, and 5) analyzing the effect on U.S. national security of foreign investment in defense-related industries.

SUMMARY

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Operations and admin.	$40,106	$41,416	$44,373	$2,957

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
Management and policy coordination (BXA-18)	32	$2,547	0	-$642

BXA proposes a reduction of resources it has previously used to fund studies on export controls and exporter assistance services.

Export administration (BXA-22)	303	23,081	+19	+1,298

BXA needs additional resources to maintain exporter assistance staff in Boston, Portland, and Northern California (+10 pos.; +$410). BXA also needs additional funds to review more frequently the Commodity Control list as required by the 1988 Trade Act, to process in a timely manner an increasing number of requests for commodity classifications, and to undertake reports required by the 1988 Trade Act including reviewing the export control policies of COCOM countries (+9 pos.; +$888).

Industrial resources administration (BXA-42)	28	1,902	+11	+835

BXA needs additional resources to analyze the effects on the U.S. industrial base of Defense Department Memoranda of Understanding (MOUs) regarding defense trade with other Defense ministries and foreign offsets as required by the defense Authorization Act of 1989, and to analyze the effect on U.S. national security of foreign investment in defense-related industries as required by the 1988 Trade Act (+11 pos; +$835).

MINORITY BUSINESS DEVELOPMENT AGENCY

The Minority Business Development Agency (MBDA) coordinates Federal efforts to develop and strengthen new and existing minority business. On a cost-sharing basis, MBDA-funded Minority Business Development Centers (MBDC's) provide technical and management assistance to minority entrepreneurs. MBDA also conducts resource development, advocacy, research and information programs.

To meet the needs of minority businesses in FY 1991, the Administration proposes to revitalize and reinvigorate MBDA through a series of program expansions.

Summary

Appropriation

	1989	1990	1991 Estimate	Increase (Decrease)
FEDERAL FUNDS:				
Appropriation: Minority business development	$39,705	$39,741	$46,161	$6,420
TOTAL APPROPRIATION:	$39,705	$39,741	$46,161	$6,420

Permanent Positions

	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation: Minority business development	188	216	224	8

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
Enterprise development (MBDA-21)	135	$34,936	0	+$3,774

Increases are provided to improve the quality of services provided by the Minority Business Development Centers (+$2,874), fund an additional three Indian Business Development Centers (+$510) and implement a rural services program (+$390).

Resource development (MBDA-25)	23	$3,106	+6	+$577

Increases are provided to foster minority ownership of franchises and hire additional staff to identify sources of debt and equity capital and sources of surety bonding for minority businesses (+4 pos.; +$380).

MBDA will reestablish its State and local programs by focusing on forming strategic intergovernmental programs, re-establish the Minority Business Opportunity Committees Program, and provide additional staff assistance to Federal agencies in formulating their annual minority business development plans and to develop and monitor interagency agreements with such agencies as the Department of Transportation, Small Business Administration and the Environmental Protection Agency. (+2 pos.; +$197).

Advocacy, research and information (MBDA-39)	30	$2,507	+2	+$1,261

Additional resources are requested to establish the Minority Business Development Advisory Council (+$75) and increase awareness of MBDA programs by updating and distributing MBDA brochures and conducting workshops and seminars on MBDA programs (+$25).

Additional resources are provided to increase information available to minority businesses by linking Business Development Centers with on-line business information systems (+$500) and establish a Minority Business Enterprise Information Center, an enhanced version of the Information Clearinghouse, which will be responsible for disseminating pamphlets, brochures, fact sheets and other information about minority-owned businesses (+2 pos.; +$146).

An increase is also requested to enhance research activities by conducting policy analysis and formulation activities and program impact evaluation studies. This will enable MBDA to accurately assess the program needs of minority-owned businesses (+$515).

UNITED STATES TRAVEL AND TOURISM ADMINISTRATION

The United States Travel and Tourism Administration (USTTA) coordinates the Federal role in international tourism. USTTA plans, develops, and carries out an international tourism marketing program designed to stimulate and encourage travel to the U.S. The Administration proposes that USTTA be funded by direct appropriations beginning in FY 1991. The Administration will separately pursue a travel promotion fee for FY 1991 intended to offset the cost of USTTA by assessing a fee on those who benefit from federal travel promotion progams.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

NOAA's basic programs are grouped into six areas: National Ocean Service; National Marine Fisheries Service; Oceanic and Atmospheric Research; National Weather Service; National Environmental Satellite, Data, and Information Service; and Program Support. In addition, NOAA is responsible for managing a number of fishery program-related accounts.

The National Ocean Service provides for the management of ocean and coastal resources, particularly in the 200-mile Exclusive Economic Zone, and for improvements in quality, quantity, geographic distribution and timeliness of ocean observations. Mapping and charting activities produce aeronautical and nautical charts and supporting documents which are compiled and sold to the public and other Federal agencies. The coastal zone management program emphasizes national coastal priorities through financial and technical assistance to states. NOAA also acquires and manages marine and estuarine sanctuaries of national significance.

The National Marine Fisheries Service is responsible for management of the fisheries within the 200-mile Exclusive Economic Zone to ensure that fishery stocks continue as a renewable resource. Fishery stocks are surveyed, catch data are collected, and research is conducted to understand better the variables affecting the abundance and variety of the resource. Protection of endangered marine species and enforcement of the laws and regulations regarding a variety of marine resources are also primary activities. Research is also conducted on interjurisdictional and anadromous fishery resources.

Oceanic and Atmospheric Research programs provide the understanding and technique development necessary to improve NOAA services (weather warnings and forecasts, solar-terrestrial services, climate predictions, and marine services) and the understanding for national policy formulation (e.g., global change, acid precipitation, rural ozone, and antarctic ozone hole). Research also is conducted on a wide range of ocean and Great Lakes topics such as the interaction of oceans and atmosphere, and the concentration and disposition of pollutants.

The National Weather Service provides weather and flood warnings and forecasts to the general public and other users. Staffed and automated stations on land and at sea and weather satellites gather meteorological observations of the atmosphere and the earth's surface. Based on these observations, a professional meteorological staff prepares warnings and forecasts and disseminates them to the public.

The National Environmental Satellite, Data, and Information Service provides for procurement and operation of the polar and geostationary weather satellites, production and launch of the LANDSAT-6 satellite, and management of NOAA's environmental data collections. The weather satellites provide meteorological data to the Weather Service.

Environmental data and information is collected from NOAA and other sources, disseminated, and archived for future use.

Program Support maintains and operates the fleet of NOAA ships and the research aircraft. Also included are executive direction, general administration, and the Regional Administrative Support Centers.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Summary

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation: Operations, research, and facilities	$1,240,052	$1,214,607	$1,316,064	$101,457

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Perm. Positions	Base Amount	Increase/(Decrease) Perm. Positions	Amount
National Ocean Service				
Mapping, charting, and geodesy	511	$49,447	0	-$2,513

Decreases are requested for state-specific projects including multipurpose mapping (-$577), multipurpose cadastre (-$1,836) and the Great Lakes mapping program (-$100).

The Administration will submit legislation to be transmitted later to augment the Harbor Maintenance Trust Fund and create the Marine Waterways Trust Fund. Certain receipts from this Fund will be used to fund NOAA marine related programs. This will not reduce NOAA program activities, but will change the method of funding.

In the legislation to be transmitted, nautical mapping and coastal charting (-200 pos.; -$13,685) will be funded through the Marine Waterways Trust Fund.

Observation and assessment	332	42,444	-3	+8,974

An increase is requested to expand an integrated NOAA program in coastal ocean science to improve scientific information for decisions related to coastal problems (+1 pos.; +$11,000). Funds are requested to expand the ocean services program (+$1,425). Of this amount an increase (+$2,300) is requested to expand core services which provide centralized collection, analysis, and distribution of real-time ocean data, and a decrease (-$875) is requested to terminate State-specific projects. Decreases are requested for circulatory surveys (-3 pos.; -$400), State-specific ocean assessment activities (-1 pos.; -$1,000), Tampa Bay mapping project (-$1,000), the wetlands demonstration project (-$900) and two observation buoys (-$151).

In the legislation to be transmitted, the tides and circulation programs (-190 pos.; -$6,836) will be funded through the Marine Waterways Trust Fund.

Ocean and coastal management	80	45,894	0	-4,700

An increase for the marine sanctuary program will provide a $3.5 million program (+$200). Grants emphasizing national coastal priorities for the coastal zone management program will be funded at $30 million (-$4,400) and program management at $2.8 million (-$500).

National Marine Fisheries Service

Information collection and analyses	1,280	106,613	+15	-8,325

Increases are requested for the following: PACFIN (+$1,000), fisheries statistics (+6 pos.; +$2,000), Bering Sea pollack (+21 pos.; +$750), conservation engineering (+8 pos.; +$750), Alaska groundfish survey (+2 pos.; +$700) and marine mammal population assessments (+$3,000). An increase is requested to lease three information systems as part of an overall ADP upgrade for improving management and supporting research activities (+$1,700).

Reduced funding is requested for: protected species research (-$649); Atlantic salmon research (-$500); oyster disease research (-$500), and stock enhancement (-22 pos.; -$4,287). Consolidation of field operations is proposed (-$4,000). No funding is requested for the following projects/programs: Chesapeake Bay studies (-$1,600), right whale research (-$235), Alaska salmon enhancement (-$3,766), sub-Arctic bottom-fish (-$753), Hawaii stock management (-$400), Yukon chinook study (-$235), and Antarctic research (-$1,300).

Conservation and management operations	474	58,483	0	-9,507

An increase is provided for implementation of the 1987 Driftnet Act (+$300). Columbia River hatcheries support (-$9,300) is to be assumed by Bonneville Power Administration customers. Reduced funding is requested for Georges Bank management studies (-$471), and harbor seals and sea lions studies (-$36).

State and industry assistance programs	207	18,909	-86	-13,015

Reduced funding is requested for product quality research (-86 pos.; -$4,400). No funding is requested for grants for interjurisdictional fisheries (-$3,500), anadromous fish (-$2,354), striped bass (-$471), and interstate fishery commissions (-$330) or add-ons for model seafood inspection (-$330), fish oil development (-$942), mahi mahi export strategy (-$188), and shellfish water standards (-$500).

Oceanic and Atmospheric Research

Climate and air quality research	281	54,299	+31	+64,373

An increase is requested to expand the Climate and Global Change program as part of a major government-wide effort to monitor, understand, and predict global change (+40 pos.; +$69,000). Reduced funding is requested for National Acid Precipitation Assessment Program (NAPAP) (-$1,487). No funding is requested for the National Climate Program Office (-9 pos.; -$1,090), regional climate centers (-$1,800), and international climate panel support (-$250).

Atmospheric programs	371	44,395	+10	-2,596

An increase is requested to improve space environment measurement and forecasting (+10 pos.; +$1,500). Reduced funding is requested for the Program for Regional Observing and Forecasting Services (PROFS) (-$1,883). No funding is requested for State-specific weather modification efforts (-$2,213).

Ocean and Great Lakes programs	221	72,993	-10	-33,963

Funding is requested to continue the Sea Grant College Program except for Marine Advisory Service agents (-$13,300). Reduced funding is requested for the Great Lakes Environmental Research Laboratory (GLERL) (-$1,600). No funds are requested for the southeast Fisheries Oceanography Coordinated Investigations (-$942), the National Coastal Resources Research and Development Institute (-$1,177), the U.S./Asia aquaculture science exchange program (-$282), the Key Largo Tropical research facility (-$377), the National Undersea Research Program (-9 pos.; -$14,285), and the VENTS program (-1 pos.; -$2,000).

National Weather Service

Operations and research	3,334	289,831	-71	+2,725

The request provides funding to maintain existing service levels at weather field offices. Funds are requested for the Modernization and Associated Restructuring Demonstration and Implementation program to prepare for the multi-site operational demonstration in 1993 (+38 pos.; +$11,000).

Decreases are proposed as follows: reduce staff at eight Weather Service Forecast Offices (WSFOs) (-35 pos.; -$787); reconfigure the four-region management structure into a three-region structure (-18 pos.; -$852); reduce data buoy test and engineering activities (-$540); discontinue maintenance of four moored data buoys surrounding Hawaii (-$565); consolidate the Pacific and Alaska headquarters (-11 pos.; -$383); eliminate the agricultural weather and fruit frost programs (-37 pos.; -$2,424); reduce the fire weather program (-8 pos.; -$470); eliminate unnecessary funding for Susquehanna River Basin flood warning system (-$700) and the Colorado River flood warning system (-$300); cancel three mountain weather observatory contracts (-$200); and extend equipment maintenance schedule (-$1,054).

In legislation to be transmitted, marine weather services (-90 pos.; -$5,301) will be funded through the Marine Waterways Trust Fund.

Systems acquisition	39	100,941	0	+76,526

Continue the production and installation of Next Generation Weather Radar (NEXRAD) units (+$43,284). Proceed with the full-scale production phase of the Automated Surface Observing Systems (ASOS) program (+$5,375). Continue development of the Advanced Weather Interactive Processing System (AWIPS) and NOAA-Port (+$28,367). Reduce maintenance funding for the National Meteorological Center Class 7 computer (-$500).

National Environmental Satellite, Data, and Information Service

Satellite observing systems/data management	850	265,060	0	+15,370

The request includes increases for the polar-orbiting system (+$49,472) and decreases for the geostationary system (-$26,202). These changes are due primarily to year-to-year variance in the costs of launches, spacecraft and ground system procurement costs. Increased funding is requested for the launch of the LANDSAT-6 Spacecraft (+$1,600). Operations support for LANDSAT-4 and LANDSAT-5 (-$9,500) will cease as a result of the anticipated demise of the satellites in FY 1990.

Program Support

Administration and services	1,217	67,275	0	+200

Increased procurement support is provided for major NWS and NESDIS projects.

Facilities	0	3,204	+1	+3,473

Funding is requested to initiate major maintenance projects at NOAA facilities nationwide (+1 pos; +$2,750) and provide for the purchase of office furniture and furnishings to support the Silver Spring relocation/consolidation project (+$2,723). Reduced funding is requested for Woods Hole fisheries laboratory maintenance (-$2,000).

Marine services	750	60,120	+22	+5,728

Funding is requested to initiate a modernization and upgrade program for the NOAA fleet (+$4,000) and reactivate the NOAA ship DAVIDSON (+25 pos.; +$2,010). No funding is requested for the Southeast Marine Center (-3 pos.; -$282)

In legislation to be transmitted, operations for the mapping and charting ships in the NOAA fleet (-272 pos.; -$19,659) will be funded through the Marine Waterways Trust Fund.

Aircraft services	93	7,440	0	+1,866

Funding is requested to replace the navigation systems on NOAA's two WP-3D research aircraft and provide adequate support for catastrophic system failures, flight training, and aircraft maintenance of air navigation instrumentation.

Other Appropriation Accounts

Fisheries promotional fund	3	2,000	-3	-2,000

Authorization for the Fisheries Promotional Fund expires at the end of FY 1990 and the Fund is proposed to be terminated in FY 1991.

Promote and develop... American fisheries	11	4,935	-11	-4,935

Balances in the fund are proposed to offset marine fishery resource programs in the "Operations, research, and facilities" appropriation in FY 1991.

Proposed for Later Transmittal

Marine waterways trust fund	0	0	0	[+45,481]

A legislative proposal will be submitted to the Congress to increase the ad valorem user fee supporting the Harbor Maintenance Trust Fund, administered by the U.S. Army Corps of Engineers and to establish a Marine Waterways Trust Fund within NOAA. Funds would be transferred from the Harbor Maintenance Trust Fund into the Marine Waterways Trust Fund, similar to the current Airport and Airways Trust Fund - Aviation Weather Trust Fund transfer. Resources transferred would be used to offset the costs of marine weather forecasts, tide and circulation estimates, and mapping and charting activities conducted in the Operations, Research, and Facilities appropriation. This proposal is consistent with the President's policy that the primary beneficiaries of a Federal service should pay for the service.

PATENT AND TRADEMARK OFFICE

The Patent and Trademark Office (PTO) is charged with the mission of administering the patent and trademark laws of the United States. PTO examines patent applications, grants patent protection to qualified inventions and disseminates technological information disclosed in patents. PTO also examines trademark applications and provides Federal registration to owners of qualified trademarks.

Summary

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Salaries and expenses	$276,845	$275,877	$353,647	$77,770
Fee collections	(167,845)	(189,977)	(241,620)	(51,643)
TOTAL APPROPRIATION:	109,000	85,900	112,027	26,127

Permanent Positions

Appropriation:	1989	1990	1991 Estimate	Increase (Decrease)
Salaries and expenses	3,724	3,898	4,765	867

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
Patent process (PTO-20)	2,602	$165,680	+590	+$44,817

An increase is provided to continue deployment of the Automated Patent System's (APS) principal capability, classified search and image retrieval, to a second examining group and to begin development of foreign patent search, patent copy sales, and Patent Application Management modules of the system (+$13,659). An increase is provided for additional professional and pre-examination clerical staff to handle the anticipated increase in patent applications from 140,000 cases originally budgeted in 1990 to 177,000 cases received in 1991 and to maintain 18-month patent pendency (+585 pos.; +$26,249).

An increase is requested to process increased interference cases in the Patent Appeals and Interferences Division (+5 pos.; +$268). Funding for patent printing and reproduction provides for the printing of an additional 5,249 patents (101,000 total; +$4,641).

Trademark process (PTO-42)	316	$16,915	+126	+$5,113

All trademark operations are financed through fee collections. In 1991, funds will be used to increase professional and clerical staff to handle the anticipated growth in workload volume stemming from implementation of trademark intent-to-use legislation (+118 pos.; +$3,149). Increased funds are provided to upgrade trademark automation systems by renewing the T-Search system lease and replacing T-Search terminals (+$1,481). An increase is needed to process the growing number of trademark appeals cases (+8 pos.; +$357). Resources are also provided to address additional printing requirements to keep pace with increased examiner production and trademark issuances (+$126).

Information dissemination (PTO-57)	524	45,023	+95	+4,742

A decrease is provided for information dissemination initiatives to reflect in large part the reduced share of APS development costs associated with this activity (-$686). Resources are provided to respond to increased demand and inquiries for PTO services and information (+34 pos.; +$1,721), to support implementation of public search room services (+16 pos.; +$193), to process additional maintenance fees and certificates of corrections workload (+20 pos.; +$685), to improve the integrity of patent search files (+10 pos.; +$243), and to enhance examiner search files by providing additional searching tools and data bases (+15 pos.; +$2,586).

Executive direction (PTO-74)	480	61,292	+32	+10,065

Increases are provided to enable PTO to maintain the four percent sample of patent applications reviewed by the Patent Quality Office (+1 pos.; +$125), for the Office of Personnel staff to keep pace with growing staff levels (+8 pos.; +$729), and to improve management and administrative computer systems (+18 pos.; +$2,856). Resources are also provided to augment workload-driven increases in procurement actions (+4 pos.; +$262) and patent attorney roster application receipts (+1 pos.; +$72). An increase is provided to lease additional space to accomodate growth in PTO operations (+$6,021).

Fee collections (PTO-113)		193,321		+48,099

Patent and trademark fees were increased 10.3 percent for the 1989-1991 fee cycle to reflect changes in the Consumer Price Index from the previous three-year period. PTO projects it will collect $241,420 thousand in patent and trademark fees in 1991. Increased fee collections reflect the growth in patent and trademark applications and the increased fees.

TECHNOLOGY ADMINISTRATION

The Technology Administration is the principal organization within the Department of Commerce for the development and promotion of Federal technology policies and programs to increase U.S. commercial and industrial innovation, productivity and growth. This is accomplished through the following program activities:

- Executive Direction. Oversees activities of the Office of the Under Secretary, including support for legal counsel.
- Technology Policy and Commercial Technology Application. Stimulates private sector cooperative research and development, promotes technology transfer, supports private sector productivity improvement efforts, reviews international Science and Technology agreements, and monitors the availability of foreign science and technology information.

In FY 1989, the Technology Administration's activities were funded through the Economic and Statistical Analysis and General Administration accounts.

NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY

The National Institute of Standards and Technology (NIST) provides a wide range of measurements, services, test methods and data to support U.S. competitiveness in world markets. This is accomplished through scientific research; cooperative efforts with public and private research institutions; technology transfer programs including the Manufacturing Technology Centers and the Advanced Technology Program; and the Malcolm Baldrige National Quality Award. These activities allow NIST to maintain our national standards for measurements; support domestic and international voluntary standards processes; promote technology innovation; support secure and reliable Federal computer systems; and spur advances in applied and developmental research being conducted by U.S. industries.

Summary

Appropriation

	1989	1990	1991 Estimate	Increase (Decrease)
FEDERAL FUNDS:				
Appropriation:				
Scientific and technical research and services	$159,000	$161,845	$198,408	$36,563
TOTAL APPROPRIATION:	159,000	161,845	198,408	36,563
Working capital fund	(1,509)	(539)	(9,772)	(9,233)

Permanent Positions

Appropriation:	1989	1990	1991 Estimate	Increase (Decrease)
Scientific and technical research and services	1,489	1,556	1,835	279
Working capital fund	1,269	1,272	1,272	0
TOTAL:	2,758	2,828	3,107	279

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base		Increase/(Decrease)	
	Perm. Positions	Amount	Perm. Positions	Amount
Measurement research and standards	443	$43,139	+78	+$7,630

Increases provide funds for quality assurance for analytical chemical measurements (+40 pos.; +$4,330); long-term research for developing atomic scale devices (+9 pos.; +$1,000); and measurement techniques and data to support biochemical manufacturing processes (+29 pos.;+$2,300).

Materials science and engineering	251	25,045	+20	+2,250

Increases will expand development of measurements and standards for advanced composite materials (+10 pos.; +$1,000) and intelligent processing of materials (+10 pos.; +$1,250).

Engineering measurements and standards	430	39,397	+151	+15,800

Increases will provide measurement technology, standards, and services for the components of lightwave systems (+50 pos.; +$5,500); high temperature superconductors (+17 pos.; +$1,900); advanced semiconductors (+41 pos.; +$3,900); and intelligent machines and processes (+49 pos.; +$5,000). Funding for studies in general toxicity and alternate refrigerants are not continued in 1991 (-6 pos.; -$500).

Computer sciences and technology	123	9,919	+36	+3,500

Increases will address the requirements of the Computer Security Act of 1987 (+24 pos.; +$2,500), including emergency response to virus attacks, and provide industry-wide coordination of standards for multivendor Integrated Services Digital Networks (ISDN) (+12 pos.; +$1,000).

Industrial technology services	97	26,086	-7	-3,950

The Regional Centers for the Transfer of Manufacturing Technology will be funded at $5 million in FY 1991 (-3 pos.; -$2,500). The Advanced Technology Program will be continued at $10 million. Funds are not requested for the State Extension Services Program (-3 pos.; -$1,300) and the Non-Energy Related Inventions Program (-1 pos.; -$150).

Research support services	187	25,470	+26	+4,122

An increase is requested to upgrade the NIST scientific computing facility to meet rapidly expanding needs for scientific computing capability (+26 pos.; +$3,122) and for safety, system capacity, and obsolescence requirements of the NIST physical (+1,000).

NATIONAL TELECOMMUNICATIONS AND INFORMATION ADMINISTRATION

The National Telecommunications and Information Administration (NTIA) formulates national policy to support the development, growth and deregulation of the telecommunications and information industries; furthers the efficient development and use of telecommunications and information services; and allocates and manages Federal use of the radio frequency spectrum. The Public Telecommunications Facilities grants program which has provided grants for planning and construction of non-commercial telecommunications facilities will be phased out by the end of FY 1990.

Summary

Appropriation

FEDERAL FUNDS:	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:				
Salaries and expenses	$13,630	$14,002	$15,252	$1,250
Public telecommunications facilities planning and construction	20,000	20,000	0	(20,000)
TOTAL APPROPRIATION:	33,630	34,002	15,252	(18,750)

Permanent Positions

	1989	1990	1991 Estimate	Increase (Decrease)
Appropriation:

TOTAL:	185	195	184	(11)

HIGHLIGHTS OF PROGRAM CHANGES
(Dollars in Thousands)

	Base Perm. Positions	Base Amount	Increase/(Decrease) Perm. Positions	Increase/(Decrease) Amount
Domestic and international policies (NTIA-23)	9	$918	+4	+$370

An increase is included to undertake research and advocate policies related to the development of advanced or high definition television (HDTV) systems in the U.S. This research will assist the Federal Communications Commission in the development of an HDTV transmission and production standard.

Public telecommunications facilities (NTIA-3)	15	$20,000	-15	-$20,000

The Public Telecommunications Facilities grant program has provided for planning and construction of public telecommunications facilities in areas not previously served. Since over 95 percent of the United States currently receives public broadcast programming, funding for this grant program has not been requested in FY 1991.

1991 PROPOSED FOR LATER TRANSMITTAL

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

Legislation will be proposed to augment the Harbor Maintenance Trust Fund. Funds are proposed to be appropriated from the Harbor Maintenance Trust Fund to the Marine Waterways Trust Fund to support various marine-related programs currently funded by direct appropriations in the Operations, research and facilities (ORF) account. Permanent positions and funding in the direct ORF appropriation will decrease by the same amount.

	1991 Estimate	
	Perm. Pos.	Amount
Marine Waterways Trust Fund	0	$ 45,481
Offset to ORF reimbursable	0	-45,481
Operations, research, and facilities reimbursable program:		
National Ocean Service	390	20,521
National Weather Service	90	5,301
Program Support	272	19,659
Total, ORF	752	45,481

Glossary of Terms

Budget Authority

Budget authority for any year represents the authority to incur obligations, requiring either immediate or future payment, which will become available during the year. Appropriations on which the Congress acts are the most common form of budget authority, allowing Federal agencies to make payments out of the Treasury for specified purposes.

Deferral

Any action or inaction by an officer or employee of the United States that temporarily withholds, delays or effectively precludes the obligation or expenditure of budget authority. Deferrals may not extend beyond the end of the fiscal year.

Federal Funds

Funds collected and used by the Federal Government for the general purposes of the Government. There are four types of Federal fund accounts: the general fund, special funds, public enterprise (revolving) funds, and intra-governmental funds. The major Federal funds is the general fund, which is derived from general taxes and borrowing.

Full-time Equivalent (Workyears) Employment

Compensable workyears for all Federal personnel, calculated by dividing the total number of hours (worked or to be worked) by the number of compensable hours applicable to each fiscal year (8 x the number of compensable days in each fiscal year.) For a fiscal year with 260 days, the divisor is 2080; for 261 days, 2088; for 262 days, 2096.

Offsetting Receipts

Collections deposited in receipt accounts that are offset against budget authority and outlays rather than being counted as budget receipts. These collections are derived from other Government accounts or from Government activities that are of a business-type or market-oriented nature.

Outlays

Obligations incurred under budget authority are generally liquidated by the issuance of checks by the Treasury. Such payments are called outlays. Outlays during any fiscal year may be payments of obligations incurred in prior fiscal years or in the same fiscal year.

Permanent Positions (Perm. Pos.)

Permanent positions are funded positions which are occupied or expected to be occupied by full-time employees with permanent appointments as of September 30 of each year.

Rescission

Enacted legislation canceling budget authority previously provided by the Congress.

Sequestration

The terms "sequester" and "sequestration" refer to or mean the reduction or cancellation of new budget authority; unobligated balances, new loan guarantee commitments or limitations; new direct loan obligations, commitments or limitations; spending authority as defined in Section 401(c) (2) of the Congressional Budget Act of 1974; and obligation limitations.

Supplemental Appropriation

An act appropriating funds in addition to those in an annual appropriation act. Supplemental appropriations provide additional budget authority beyond original estimates for programs or activities (including new programs authorized after the date of the original appropriation act) for which the need for funds is too urgent to be postponed until enactment of the next regular appropriation act.

Trust Funds

Funds collected and used by the Federal Government for carrying out specified purposes and programs according to terms of a trust agreement or statute, such as the social security and unemployment trust funds. Trust funds are not available for the general purposes of the Government.

Mr. SMITH. We have with us today the Secretary of Commerce, the Honorable Robert Mosbacher. How do you want to proceed?

Secretary MOSBACHER. Mr. Chairman, I would just as soon go right ahead with the budget and your questions, sir, unless you particularly want me to read a statement.

Mr. SMITH. We will put your statement in the record and proceed, if that is what you want.

Secretary MOSBACHER. If you would put my statement in the record, I would appreciate it.

Mr. SMITH. All right.

THE OFFICE OF THE INSPECTOR GENERAL'S STATEMENT OF CONSULTING SERVICES AS REQUIRED BY TITLE 31 U.S.C. SECTION 1114(b)

The Office of Inspector General reviewed consulting services contract data reporting at three Department of Commerce procurement offices. Overall, consulting services contract data reported to the Federal Procurement Data System was understated by about $19 million for a 21 month period ending June 30, 1988. Reporting problems were caused partly because the Federal Procurement Data System is not structured to track advisory and assistance contract data in the same manner as the Department's system. The Department's system records and tracks consulting services by product or service code. These codes are converted to yes or no codes for the FPDS.

However, the Department needed to improve controls over reporting the data to its own system. Data in the Commerce system was not accurate and complete due to inadequate controls over data preparation, entry, and verification.

We recommended that procurement personnel receive training in data preparation and entry, and that contracting officers do a better job verifying the data before it is entered. We also recommended that procurement staffs verify data after entry in the FPDS to ensure accuracy and completeness. The Bureaus implemented all our recommendations and the Department added edits to the Commerce system which improved the automatic classification of consulting services and eliminated the need for manual verification.

PREPARED STATEMENT BY ROBERT A. MOSBACHER
SECRETARY OF COMMERCE

BEFORE THE SUBCOMMITTEE ON
COMMERCE, JUSTICE, STATE, THE JUDICIARY AND RELATED AGENCIES
COMMITTEE ON APPROPRIATIONS
HOUSE OF REPRESENTATIVES
MARCH 1, 1990

MR. CHAIRMAN, MR. ROGERS, AND MEMBERS OF THE SUBCOMMITTEE, TODAY I PRESENT TO YOU THE DEPARTMENT OF COMMERCE'S BUDGET REQUEST FOR FISCAL YEAR 1991 -- A TOTAL OF $2.5 BILLION. THE REQUEST FOR 1991 IS $1 BILLION LESS THAN THE DEPARTMENT'S 1990 REQUEST BECAUSE THE PEAK ACTIVITIES FOR THE 1990 DECENNIAL CENSUS WILL BE OVER BY THEN.

DURING MY FIRST YEAR AT COMMERCE, THE DEPARTMENT HAS SCRUTINIZED ITS GOALS VERY CLOSELY. IN PARTICULAR, WE HAVE TAKEN HEED OF AMERICA'S SITUATION IN THE LAST DECADE OF THE TWENTIETH CENTURY AND TRIED TO LOOK AHEAD TO HER PLACE IN THE TWENTY-FIRST CENTURY.

THE PRE-EMINENT ASPECT OF THE CURRENT SITUATION, FOR COMMERCE AND ITS PROGRAMS, IS THAT AMERICA'S TRADE POSITION AND TECHNOLOGICAL SUPREMACY ARE UNDER CHALLENGE. OUR COMPETITORS ARE AGGRESSIVELY PURSUING THEIR OWN INTERESTS IN THE GLOBAL MARKETPLACE. TO COMPETE SUCCESSFULLY, THE UNITED STATES MUST OFFER THE BEST

PRODUCTS AND SERVICES AT THE LOWEST COSTS. AMERICA'S BUSINESSES MUST DO "THE RIGHT THING RIGHT THE FIRST TIME."

PRESIDENT BUSH SAID IT WELL IN THE STATE OF THE UNION ADDRESS. HE SAID:

"IN THE TOUGH COMPETITIVE MARKETS AROUND THE WORLD, AMERICA FACES GREAT CHALLENGES AND GREAT OPPORTUNITIES. AND WE KNOW THAT WE CAN SUCCEED IN THE GLOBAL ECONOMIC ARENA OF THE '90S, BUT TO MEET THAT CHALLENGE WE MUST MAKE SOME FUNDAMENTAL CHANGES -- SOME CRUCIAL INVESTMENT IN OURSELVES."

WE KNOW WHAT IS REQUIRED. THE NATION MUST PROVIDE HIGHER QUALITY PRODUCTS AND SERVICES. WE MUST MAKE THE MOST OF HUMAN RESOURCES THROUGH GREATER EDUCATIONAL OPPORTUNITIES. LEGAL BARRIERS THAT IMPEDE OUR INDUSTRIES' COMPETITIVENESS MUST COME DOWN. WE MUST ENCOURAGE COMPANIES TO TAKE THE LONG VIEW BY DECREASING THE COST OF CAPITAL. NEW TECHNOLOGIES MUST REACH THE MARKETPLACE SOONER. MORE OF THE GOVERNMENT'S $70 BILLION ANNUAL INVESTMENT IN RESEARCH AND DEVELOPMENT MUST YIELD COMMERCIAL PRODUCTS. ENVIRONMENTAL GOALS AND COMPETITIVE GOALS NEED TO GO HAND IN HAND. WE MUST PROMOTE FREE TRADE AND ENCOURAGE MARKET-BASED ECONOMIES AROUND THE WORLD.

At Commerce, we have built our 1991 request around this assessment of America's present and our strategy for her future.

TRADE

Fighting unfair foreign trade barriers is a top priority within Commerce's program. Additional staff will allow the International Trade Administration to process complex unfair trade cases, enforce steel agreements, support efforts to negotiate fair steel trading practices, and increase U.S. participation in the economies of eastern Europe and the Soviet Union. The International Trade Administration has already set up an eastern Europe business information center as the government's clearinghouse for trade and investment information. The United States and Foreign Commercial Service will also increase its presence in eastern Europe. We will beef up our trade promotion efforts.

Expanding overseas markets for American goods and services is another high priority. I believe that an adequately staffed sales force is the best way to promote U.S. exports. Additional resources for the International Trade Administration will bolster American efforts to take advantage of the single European market, to seize the opportunities offered by the U.S.-Canada free trade agreement, and to compete successfully around the Pacific rim. For the first time in many years, the 1991 request includes appropriated funding for the United States Travel and Tourism Administration to work with industry to promote travel to the United States.

COMPETITIVENESS

During the coming year, the Department will assess the proper deployment of the foreign and domestic staff of the United States Foreign and Commercial Service. The 1991 budget provides the resources for more balanced deployment of the domestic staff and includes a substantial increase for expansion of the Foreign Commercial Service staff in Japan, the Pacific rim, and eastern Europe. We intend to put the money where the return is the greatest.

Additional resources for the Bureau of Export Administration will support an export control program that safeguards national security without needlessly restricting exports. The 1991 request includes funds for exporter assistance staff in New England, Portland, and northern California. The Bureau will also be able to review the list of controlled commodities more

FREQUENTLY AND HELP EXPORTERS DETERMINE CORRECT COMMODITY CLASSIFICATIONS.

AMERICAN INDUSTRY CANNOT COMPETE IN THE GLOBAL MARKET WITHOUT HIGH QUALITY PRODUCTS. FOR THE NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY, THE PRESIDENT HAS HIGHLIGHTED RESEARCH IN ROBOTICS, SUPERCONDUCTIVITY, SEMICONDUCTORS, CHEMICAL PROCESSES AND OTHER AREAS. BESIDES ADDING SUBSTANTIAL RESOURCES IN CORE RESEARCH PROGRAMS, THE DEPARTMENT'S REQUEST CONTINUES PROGRAMS TO FOSTER THE FORMATION OF CONSORTIA TO DO GENERIC, PRE-COMPETITIVE RESEARCH INTO PROMISING TECHNOLOGIES AND TO ESTABLISH REGIONAL CENTERS TO TRANSFER ADVANCED MANUFACTURING TECHNOLOGIES TO MEDIUM AND SMALL-SIZED BUSINESSES.

PROMPT EXAMINATION AND REGISTRATION OF PATENT AND TRADEMARK APPLICATIONS AND DISSEMINATION OF INFORMATION ARE OTHER WAYS COMMERCE CAN SUPPORT AMERICA'S BUSINESSES IN GLOBAL COMPETITION. DURING 1989, THE DEPARTMENT ACHIEVED ITS LONG-STANDING GOAL OF PROCESSING PATENT APPLICATIONS WITHIN AN AVERAGE OF 18 MONTHS. WE HAD ALREADY ACHIEVED OUR GOAL IN THE TRADEMARK AREA. WE ARE NOT COMPLACENT, HOWEVER. THE INCREASING NUMBER OF PATENT APPLICATIONS DICTATES THAT WE INCREASE THE STAFF OF THE PATENT AND TRADEMARK OFFICE TO MAINTAIN 18 MONTH PENDENCY. WE ARE ALSO CONTINUING EFFORTS TO INSTALL THE AUTOMATED PATENT SYSTEM, WHICH

WILL ULTIMATELY REDUCE OUR DEPENDENCE ON PAPER FILES AND CONTRIBUTE TO HIGHER QUALITY PATENT EXAMINATIONS.

ECONOMIC STATISTICS

KNOWING WHERE WE STAND AMONG THE WORLD'S ECONOMIES AND UNDERSTANDING HOW OUR ECONOMY IS FUNCTIONING ARE CRITICAL TO SUCCESSFUL COMPETITION. THE 1991 REQUEST INCLUDES ADDITIONAL FUNDS TO CARRY OUT THE PRESIDENT'S COMMITMENT TO IMPROVE OUR ECONOMIC STATISTICS. THIS WILL INCLUDE MAINTAINING THE QUALITY OF THE GROSS NATIONAL PRODUCT AND BALANCE OF PAYMENTS ACCOUNTS AND IMPROVING INTERNATIONAL INVESTMENT DATA. NEW FUNDS WILL ALSO GO TOWARDS COLLECTING BETTER DATA ON SERVICE INDUSTRIES, ON UNEMPLOYMENT, AND ON THE EFFECTS OF FEDERAL PROGRAMS ON HOUSEHOLDS AND INDIVIDUALS.

DECENNIAL CENSUS

FOR DEMOGRAPHIC DATA, THE DECENNIAL CENSUS IS THE NATION'S CHIEF SOURCE. AS YOU KNOW, THE ACTIVITIES OF THE 1990 DECENNIAL CENSUS ARE APPROACHING THEIR PEAK. A MAJOR CONCERN IS THAT THE RECENT CONGRESSIONAL CUTS OF $57.6 MILLION FROM THE PRESIDENT'S BUDGET ON TOP OF PREVIOUS CUTS AND COST ABSORPTIONS MIGHT COMPROMISE OUR ABILITY TO CONDUCT A FULL AND FAIR CENSUS. IN PARTICULAR, WE

CONTEMPLATED MAKING THE VACANT/DELETE CHECK CONTINGENT UPON THE MAIL RESPONSE RATE. WE HAVE RESOLVED DEFINITELY, HOWEVER, TO PROCEED WITH THE VACANT/DELETE CHECK AS ORIGINALLY PLANNED. IF THE MAIL RETURN SUBSTANTIALLY EXCEEDS WHAT WE HAVE USED AS OUR PLANNING BASE, IT WILL BE POSSIBLE TO PROCEED WITHIN THE CURRENTLY APPROPRIATED AMOUNT. OTHERWISE, WE INTEND TO PROPOSE A DIRE EMERGENCY SUPPLEMENTAL APPROPRIATION WITH OFFSETTING EXPENDITURE REDUCTIONS, IN LATE APRIL, WHEN WE WILL KNOW THE ACTUAL MAIL RETURN RATE AND THE AMOUNT OF MONEY NEEDED TO COMPLETE THE CENSUS. WE WILL CAREFULLY MONITOR THE MAIL RETURN RATE AND KEEP THE COMMITTEE APPRISED. OF COURSE, OTHER TOTALLY UNANTICIPATED SETBACKS, SUCH AS A NATURAL CALAMITY, MAY NECESSITATE A SUPPLEMENTAL. I UNDERSTAND THAT SUPPLEMENTAL APPROPRIATIONS HAVE BEEN USED DURING THE DECENNIAL CENSUS YEAR AS REQUIRED BY EVENTS.

GLOBAL ECONOMICS -- GLOBAL ENVIRONMENT

WITH EACH PASSING YEAR IT BECOMES MORE APPARENT THAT ALL HUMAN ACTIVITY, INCLUDING OUR ECONOMIC EFFORTS, MUST TAKE INTO ACCOUNT THE NATURAL ENVIRONMENT. COMMERCE'S PROGRAMS DEAL WITH ECONOMIC AND TRADE CONCERNS, AND WITH THEIR ENVIRONMENTAL EFFECTS. THE DEPARTMENT IS A MAJOR PARTICIPANT IN A GOVERNMENTWIDE INVESTIGATION OF GLOBAL CLIMATE CHANGE, FOR WHICH THE PRESIDENT

IS PROPOSING MORE THAN $1 BILLION IN 1991. WE ARE ASKING FOR ADDITIONAL RESOURCES SO THAT THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION CAN CARRY OUT ITS VITAL ROLE IN MONITORING AND CONDUCTING RESEARCH ON CLIMATE CHANGE. THE RESEARCH RESULTS WILL FORM THE BASIS FOR ECONOMIC AND ENVIRONMENTAL POLICY ON NATIONAL AND INTERNATIONAL LEVELS.

THE 1991 REQUEST ALSO INCLUDES INCREASED SUPPORT FOR RESEARCH AND INVESTIGATION OF THE COASTAL OCEANS. WE ARE ALSO ASKING FOR FUNDING FOR THE COASTAL ZONE MANAGEMENT PROGRAM AND THE NATIONAL SEA GRANT COLLEGE PROGRAM. THESE REQUESTS REFLECT IN PARTICULAR THE CONCERN THE PRESIDENT EXPRESSED DURING THE CAMPAIGN ABOUT THE COASTAL WATERS. IN TOTAL, I AM REQUESTING 35 PERCENT MORE FOR THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION THAN THE LAST REAGAN BUDGET AND 10 PERCENT MORE THAN CONGRESS APPROPRIATED IN 1990.

DURING 1991, WE WILL MOVE AHEAD TO MODERNIZE THE NATIONAL WEATHER SERVICE SO THAT IT CAN SERVE THE NATION INTO THE NEXT CENTURY. WE WILL DEPLOY THE NEXT GENERATION RADARS AND REPLACE OUR WEATHER SATELLITES. WE WILL CONTINUE WORK ON SYSTEMS TO AUTOMATE COLLECTION AND PROCESSING WEATHER DATA. I CAN ASSURE YOU THAT WE WILL CLOSE EXISTING PUBLIC WARNING AND FORECAST STATIONS AS PART OF THE MODERNIZATION EFFORT ONLY IN ACCORDANCE WITH PUBLIC LAW

100-685. I will certify beforehand that closing stations will not degrade the current level of service.

MINORITY BUSINESS DEVELOPMENT AGENCY REINVIGORATION

Competing successfully in the global marketplace requires tapping the skills and creativity of all citizens. Another of my top priorities is to reinvigorate the Federal Government's assistance to minority businesses. The Department is requesting a 15 percent increase to upgrade and strengthen the Minority Business Development Agency's business development activities, strengthen the Agency's partnerships with state and local government, and improve agency management.

* * * * *

The Commerce budget is part of President Bush's plan to reduce the deficit without raising taxes, changing Social Security, weakening defense, or reducing benefits to the needy. I am proud to say that, even with the need to restrain spending, the Department is able to propose important initiatives in areas vital to the nation's security and well-being.

The Department believes that providing adequate funding to critical programs requires reducing or eliminating programs whose missions have been achieved, activities that the private sector or state and local governments can carry out, and programs that have proven ineffective or are of low priority given fiscal constraints. The Department also believes that reducing specific programs is preferable to continuing across-the-board reductions, cutting high-priority programs along with the rest.

To compete around the globe, the United States, and the federal government in particular, must allocate its resources carefully. We must fund the programs that can make a difference and discard those that have served their purpose. We must learn to live within our means. This budget demonstrates Commerce's commitment to those objectives. I know that you care as deeply as I do that the nation fare well in the global marketplace. I know from many discussions over the past year that this budget reflects many of your concerns, even if the amounts for individual programs are not what you might want. I look forward to working with you to ensure that Commerce's programs receive the funding that they deserve.

EASTERN EUROPE FUNDING INCREASE

Mr. **Smith.** Now you have a big increase in here, a substantial increase, for Eastern Europe, and that is understandable. What can you tell us about this? Are you already shifting personnel in 1990, or is this something that is just going to happen next fiscal year?

Secretary **Mosbacher.** We are already shifting personnel. We are reopening an office in Czechoslovakia, where frankly we closed the Foreign Commercial Service office quite a few years ago because there was a lot of harrassment of our people. It has changed so tremendously that now everyone is anxious we open there.

We will put TDY or temporary duty people in there immediately, and we have started someone in language training as the Foreign Commercial Service officer. We will have some nationals in there, too. I was over there the other day. I talked to the Ambassador about space.

So Czechoslovakia will be the largest change, because we had actually closed there. We will be adding personnel both in Poland and Hungary, and I suspect eventually in some of the other countries, too.

Mr. **Smith.** Where are these personnel coming from? Where are you taking them from?

Secretary **Mosbacher.** Some of them have been in other sections of the Foreign Commercial Service, but Susan Schwab, Assistant Secretary Schwab, is probably here. She is not here? We can give you just where they came from, but some of them were here in the Washington office, some of them were in other areas.

Mr. **Smith.** Are they people that need to go back to those locations, or can they just permanently stay in Eastern Europe?

Secretary **Mosbacher.** In some cases we are just adding to people who are already there. For instance, in Poland we already have a very good office. We will just add to it, and Hungary also. Czechoslovakia is the big change because it is reopening itself.

Mr. **Smith.** Yes. Well, it kind of concerns some of us because if you are taking them from the field offices. The field offices are pretty important in every State, and they already don't have very many people in most of those field offices.

Secretary **Mosbacher.** We are adding a total, as you know—our budget is up what, $7.95 million?

Mr. **Brown.** Yes.

Secretary **Mosbacher.** And we are adding a total of 107 people to the U.S. Foreign Commercial Service offices, all of them in the field rather than in here. Isn't that correct?

Mr. **Brown.** There are none on the domestic side.

Secretary **Mosbacher.** None on the domestic side.

NOMINATION OF NATIONAL INSTITUTE OF STANDARDS AND TECHNOLOGY UNDER SECRETARY

Mr. **Smith.** Okay. Now with regard to the National Institute of Standards and Technology, you still don't have a head for that?

Secretary **Mosbacher.** We have recommended to the President an Under Secretary of Technology——

Mr. **Smith.** I am wrong. You do have one for NIST, Mr. Lyons.

Secretary **Mosbacher.** Oh, I'm sorry.

NOMINATION OF UNDER SECRETARY FOR TECHNOLOGY ADMINISTRATION

Mr. SMITH. You do have one for NIST, Dr. Lyons, so what about the Under Secretary of Technology?

Secretary MOSBACHER. Well, I knew that is what you meant. [Laughter.]

We recommended one to the President, and going through a combination of White House, FBI, getting his own affairs in order, I would hope that he would be announced shortly. Thirty to forty days is our best guesstimate here.

Mr. SMITH. Meanwhile, most of those staff who would be reporting to him are currently reporting to others, and so I wonder why you don't think that should be a permanent situation. We have gotten along this long without him. What is the situation?

Secretary MOSBACHER. Oh, I think we need him a great deal. Deputy Secretary Murrin fortunately has a very strong background, also, in technology, but there is an awful lot to be done in that area.

Tom, do you want to add a little to that?

Mr. SMITH. Well, and while you are at it, cover this: Should these external technology programs be under the new Under Secretary instead of NIST?

Mr. MURRIN. Well, what we are doing, Mr. Chairman, is essentially debugging an evolving new organization, as you know. The Under Secretary position did not exist at all before. The Technology Administration organization, as it is now planned and evolving, is quite different. The relationship with NIST is different.

As the Secretary just suggested, I have been spending much of my time, essentially on an ad hoc basis, coordinating the key people involved. We are very confident, sir, that we really can justify fully that new position, and we really will have a very effective team, all of this aimed at helping you and others develop hard-hitting policies and procedures to enhance our global competitiveness, particularly relating to technology. So we are really evolving that, and we hope the new Under Secretary will be through this process successfully in the next 30 to 40 days.

NIST BUDGET INCREASE FOR EXTERNAL PROGRAMS

Mr. SMITH. Well, I know the Secretary is strong on this because we have talked about it, but there are new missions that are expected to be carried out in NIST or wherever, the so-called external programs rather than the core programs. I notice in your budget that you have a $33 million increase in core programs and only $4 million in external programs. That doesn't seem to—the $4 million is a cut, $4.6 million. That doesn't seem to line up with putting additional emphasis on this new mission.

Mr. MURRIN. While we are getting our jargon and data clarified here, let me mention that one of those new initiatives that we think you are interested in and supportive of is the Advanced Technology Program, where we have for the first time, as you know, $10 million. That process has well started, despite the absence of the Under Secretary, and we are hoping that we will be able to effectively commit those funds during this year, so that is a major new initiative underway.

Mr. **Smith**. Well, it is partly this signal, I think, that has caused some people in the authorizing committee to talk to me about the advisability of putting these external programs under the Under Secretary for Technology. Do you think that is advisable or not? Do you think they would get more attention there?

Mr. **Murrin**. Well, what we are doing—and I hope this is responsive—the Secretary is a great proponent of what he terms "collegiality," and I think by that he means we had better cooperate effectively together and use well our total resources. What we are finding is that we have tremendous expertise in present parts of the organization, some of them, somewhat disparate, frankly, in regard to how earlier programs were conducted. We are pulling those together, we think in a very promising and soon to be effective way.

Dr. Lyons, for example, who you met and I think were pleased with during his recent visit——

Mr. **Smith**. Right. I was.

Mr. **Murrin** [continuing]. Will have an office at headquarters and will be spending part of his time there to directly interface with us while he takes over his new responsibilities in Gaithersburg, and that is just one small but, we think, significant example of how we are teaming our people more effectively together.

Mr. **Smith**. Well, we are interested in this. As you know, going back 4 or 5 years ago, the people in the core programs have really not wanted the additional mission. Every time we try to start something new, they say, "That is coming off of us." That is not so. I mean, we need this additional mission. Then I saw these figures and they raised a red flag with me.

Secretary **Mosbacher**. Well, we agree with you, Mr. Chairman. As a matter of fact, we are looking at the figures. It may look, from your point, as if we are talking about a reduction from last year. Actually, we had asked for nothing last year and $15 million this year.

Mr. **Smith**. Yes, but we appropriated funds last year.

Secretary **Mosbacher**. Yes, and we went ahead and spent it, but this year this is our request. It depends on which side of the table you are looking at it from, but we consider it from our view a big increase.

Mr. **Smith**. Yes, yes.

Secretary **Mosbacher**. And we are dedicated to both the core and the outside efforts. We agree with you on that.

NOMINATION FOR ECONOMIC DEVELOPMENT ADMINISTRATION DIRECTOR

Mr. **Smith**. Now I want to ask about EDA. We still don't have a head for EDA. When are we going to get a director for EDA?

Mr. **Berman**. Mr. Chairman, Joyce Hampers has been nominated by the President, and we have been in contact with Chairman Hollings and I think that hearing date is pending—I'm sorry, Chairman Burdick, on a hearing date. It took so long because she had complex financial holdings that had to be reconciled.

Mr. **Smith**. I see. Do you think that will happen very soon now, or——

Mr. **Berman**. Yes, sir, we hope it will be very soon.

Mr. **Smith.** Well, I don't need to go into details here, but you have problems at EDA. You have had ever since you have been in office. They were kind of a runaway agency down there. I don't mind administrators who don't agree with the law but nevertheless administer the law, but I can't countenance people who not only don't like the law, but also decide they are not going to administer the law because they don't like it.

Of course you have had this vacancy, and you left a deputy in charge there who is just like the one that left, and it is getting to the point where it is intolerable. He not only defies the law, he is thumbing his nose at you. You are over him. You are the head honcho around here, you know, and we have to get this agency to doing what it is supposed to do. Do you agree?

Secretary **Mosbacher.** Yes, and we have a nominee who we have spent a lot of time discussing how to proceed with, and we think she will do a good job, assuming that she gets confirmed, which we have no reason to think she won't very soon.

Mr. **Smith.** Okay. I will have more questions, but I will yield to Mr. Rogers now.

Mr. **Rogers.** Thank you, Mr. Chairman.

Mr. Secretary, good to see you again.

Secretary **Mosbacher.** Good to see you, Mr. Rogers.

Mr. **Rogers.** Let me compliment you, first off here, on your efforts to bring Commerce to the table on a whole host of issues critical to the performance of our economy. The resources you have must be put to the best use, and in my view you have endeavored to do just that.

As the world switches from, or as America switches from, military preparedness to the new world of economic preparedness, and where national security is defined not in terms of your military prowess but of your economic prowess, you sit in the catbird's seat in the new world's picture. Not only is that a nice place to be, but of course it carries heavy responsibilities. I think you have presented us with a budget policy that, one, is more workable than we have had in the past and, two, reflects by and large, I think, the right priorities, so let me compliment you for a good start.

Secretary **Mosbacher.** Thank you, sir.

Mr. **Rogers.** The third paragraph in your prepared testimony was music to my ears. Our trade challenge is monumental. We need a strong sales force, and I am very pleased that you are seeking another 107 positions for the Foreign Commercial Service, which hasn't had enough hands on deck at the very time we need them, and I am very pleased that you have asked for those additional positions. Now I wonder if you could give us an idea of where those will be allocated around the world?

ALLOCATION OF RESOURCES FOR THE FOREIGN COMMERCIAL SERVICE

Secretary **Mosbacher.** Yes, sir. Japan and the Pacific Rim will account for 34 positions. East Europe will be 32. E.C., including our new office in Brussels, will be 30, and all other areas will be 11, a total of 107. We think that is important. It is important that we add to East Europe, but remember if you look at percentage of trade, although we want to make it grow and happen, the major part of our trade is Pacific Rim and E.C.

EASTERN EUROPE TRADE

Mr. Rogers. Well, it seems to me that given the customs in Japan and our long-time effort to break into that market, and the relative lack of success therein, and with this huge—the world's largest market, now, even in the old European Community nations, not to mention the new Eastern Bloc nations—with that huge new bloc coming onstream as a unified market with harmonized policies, it seems to me that has to be our highest and best opportunity to strike at the trade deficit, that is to say, Eastern and Central Europe. Would you agree with that?

Secretary Mosbacher. I think it is important as a market opening and as a future potential, but we have brought down our trade deficit in Western Europe, in the E.C. countries, to a slight surplus in 1989 for the first time, and we are talking about much bigger trade numbers than we will see in Eastern Europe for the next probably 10 to 20 years.

So I am not going to diminish Eastern Europe, but the whole rest of the world of course is of major importance. We are talking about the Pacific Rim being a tremendous opportunity for growth, and Japan for the first time—and I am a realist, so I am not claiming this is going to work—but they have put forth an import policy that will allow tax incentives to Japanese companies, for instance, a 5 percent tax credit for those who have incremental imports, new tariff reductions, new import offices around both their country and our country and other places in the world.

I think we have to make sure that we give our companies in this country every opportunity to export to Japan. Now at the end of another year we may find that it was all just rhetoric and work, but if that is true, we want to know where to put the blame: not on us; on them. If it does work, it can make a major difference in our trade deficit. Our trade deficit now is still right at $50 billion with Japan, and that amount equals over 45 percent of the total trade deficit because it has come down everywhere else and is now $108 billion overall.

So I agree that Eastern Europe is important, but not to the exclusion of any other area.

Mr. Rogers. Well, I guess the point I wanted to make was that it seems to me that dollar for dollar, we can probably get more bang for the buck on the trade deficit in E.C. than we can in Japan and the Far East, the Pacific Rim. At least that has been the history that we have had so far with Japan.

But I am glad to see people going to Japan. I remember in Osaka, at the office in Osaka, we had one Foreign Commercial Service officer. This is 2 or 3 years ago. I guess that is the second largest Japanese economy, and we had one person trying to hustle American goods down there, and fighting the State Department all the while.

Has that problem improved itself?

Secretary Mosbacher. Yes. Yes, and we talked about it when we were over there, too. As you will notice, we are increasing the officers by 6 and the foreign nationals by 10 in January, so we are going to push that.

FOREIGN COMMERCIAL SERVICE MINISTER—COUNSELORS

Mr. ROGERS. As I have mentioned, we have all had a chance to talk with many of your FCS people at posts around the world regarding the problem of commercial officers being hamstrung by the State Department personnel; it is something that has troubled me and other members of the subcommittee. I wonder, since you have changed the designation of the ranking FCS officer at eight of the posts to Minister-Counselor, how that has worked out so far?

Secretary MOSBACHER. Well, I think that having these Minister-Counselors has helped. We have eight, as you know. We think we need at least two more now, one for the newly opening office in Brussels for the E.C. and one in Seoul, Korea. It elevates them to equal level with other areas and gives them more access to the Ambassador, gives them more stature with both the governments and the private sector in these countries, and I think it is an important step for us.

I will say, though, that we are getting more cooperation now from the State Department than at any time I am familiar with, and I have talked to others that say it is a better relationship today than it has ever been in memory.

Mr. ROGERS. Good.

Secretary MOSBACHER. It is moving in the right direction, anyway.

Mr. ROGERS. You had a long way to go, but I am glad to see you are moving the right way. I hope you and Secretary Baker have more fishing trips together about that. [Laughter.]

Secretary MOSBACHER. We will do that. I am going to tell him that you recommend it.

Mr. ROGERS. What the doctor ordered, you understand.

ECONOMIC MARKETPLACE COMPETITION

As we enter this new era in the world of not military competition but economic marketplace competition, we are up against many competitors whose governments are so directly involved in their companies' business activities that it puts many of our companies at a great disadvantage, particularly with Japan but I suspect with others. Do we need to change the way we do business internationally vis-a-vis the involvement of the Government more in the international competition that we are up against?

Secretary MOSBACHER. Well, I think we need to be more cooperative between Government and business than we have ever been, and I think we are. We are sort of late starters in that game, but I think today business and labor and academia—but particularly the business field—are very comfortable in talking to us about some of the problems they run into trying to do business in other parts of the world.

We try to help them. You may have seen an article in the paper a few weeks ago where the President and the Vice President and the Secretary of State and the head of USTR, as well as myself, called or wrote—in my case, I happened to do both—our counterparts in two countries. I think we are getting to where, just as you say, that we have to be cooperative in this because it is one big, tough global marketplace. We are working toward it, and the President and this administration are very aware of it, and we are moving in that direction.

Mr. Rogers. Well, regarding one of the remnants of the era when the American consumer had to be protected from competing American companies, the antitrust law in today's world where the competition of GM is not Ford but Toyota or somebody else, a foreign national or a foreign company, do we need to relax or change our antitrust laws more, and are you going to be promoting that?

ANTITRUST LAWS

Secretary Mosbacher. Yes, we are, and I think the Administration is very much together on this now, and the President I think will be talking much more about it. We are talking about changing the antitrust laws to allow joint production, joint manufacturing, as well as joint R&D which had heretofore been true.

NATIONAL COOPERATIVE RESEARCH ACT

What is the name of the law?

Mr. Berman. That is the National Cooperative Research Act.

Secretary Mosbacher. Yes, the National Cooperative Research Act is the act that we will be pursuing which will allow joint production.

Mr. Rogers. Well, many of us believe we can't compete under present laws effectively in this new world market. I remember a couple of years ago or so, GE was wanting to develop the new, next generation jet engine. The cost involved in the research and the development of that engine was such that GE could not finance it itself. It was prohibited by American laws from seeking out other American companies to joint venture that kind of an operation, and was forced to team up with a Japanese company to get the cash involved in trying to develop that new jet engine, but in the past had to give up the technology to people who didn't have it. It just seems to me that that is shooting yourselves in the foot for no reason. Do you agree with that?

Secretary Mosbacher. We totally agree with it, and that is why, frankly, we have pushed very hard and this administration has come together very well on feeling the same way.

Mr. Rogers. At the same time, with the global economy now upon us, multinational corporations are going to dominate, obviously, that new world market. Is that going to freeze out the ability of the middle-size company or the smaller company in the international market? And how can we be sure that companies other than multinationals have access to the world market?

Secretary Mosbacher. I think one of the main ways is what we do and need to publicize even more, and that is that the district offices of the U.S. Foreign Commercial Service as well as the foreign offices, put out a lot of data on matchmaking of exporters and importers. We have seminars and put out publications because we feel very strongly that in order to compete in this world, the middle-size company and the smaller company—which are more prone to exporting than the larger, because many of the large companies will end up building plants in the area and then almost become part of the scene, whether it is the European Community or somewhere in the Pacific, whereas the smaller or middle-size are much more liable to be exporters to that area.

So we want to get them all the data. We have been trying to inform them of export trading companies. In some cases they have banded together in their associations to form these, and it has been a good step. So again, we are moving in this direction. We need to move faster. We are doing as well as we can right now, but we would like to broaden it even more.

Mr. ROGERS. Well, again, in today's world where the competition has switched from the battlefield to the marketplace, you are almost the new Secretary of Defense, and we want to arm you properly.

CLEAN AIR ACT LEGISLATION

Let me finish up my round here. Let me ask you about something I am not, I don't think, quite as complimentary on, and that is the Clean Air Act legislation. I am concerned that the Department has not been at the table on that issue, an issue of vital importance to a great number of us. From the news accounts that I have seen and conversations within the industry and other officials, I have been left with a sense that Commerce just simply took a powder on the whole issue.

Commerce has a major stake in that bill, or should have. It is not just an environmental issue, by any means. It is an economic debate. It affects ratepayers, industries, potentially hundreds of thousands of jobs, and all sorts of things. I hope you can prove me wrong, but I don't think you have participated in that debate, and I think the wealth of data that Commerce has access to could have had a major impact for the good. I wonder if you have any comment about that?

Secretary MOSBACHER. Well, unfortunately I have had to personally be recused from some of these discussions because of the makeup of the Clean Air situation, and from what I have heard—maybe from different sources—Deputy Secretary Murrin and Counsellor Berman have represented us well. In the global warming area we are definitely a player. We have gotten $69 million in additional funds to work on the global warming problem and get some more data, and definitely are players.

But on the Clean Air Act, let me ask Tom Murrin and then perhaps Wayne Berman to bring you up to date.

Mr. MURRIN. Mr. Rogers, one of the Commerce initiatives that we hope you and the others are pleased with is largely motivated by the interest of the Secretary in this, despite his recusal constraints. We have come to appreciate within Commerce that we may have perhaps the only Federal Government agency where on the one hand we have absolutely world class science and engineering capabilities relating to the environment in NOAA. There we have, for example, over 800 PhDs, so it is a world class national resource.

At the same time, as you know, we have a very capable economic affairs organization, typically aimed at activities more in producing accurate statistics, and these days very much involved in the census, those organizations respectively headed up by Dr. John Knauss and Dr. Michael Darby. We are conducting an in-house study, in a very analytical and professional way, of trading off some of the desirable environmental enhancements on the one hand with the competitive challenge and economic burden related to those on the other hand. We think this may be the outstanding analysis of its kind in our Government and probably in the country, and we think will serve soon to provide some very valuable policy and procedural guidance to the Administration.

So it is a top priority activity with us——

Mr. ROGERS. It is getting a bit late, you know. We are going to, the House committee is going to start marking the bill up next week, and NOAA I am told early in 1989 had extremely good numbers that challenged the severity of the problem of the acid rain accusations, and yet here we sit with our hands folded. I am just a bit perturbed that we are not using the material that we have, and to which the American Public is entitled, particularly those people who would be harmed by these very, very strict, strong acid rain provisions that could pass this Congress.

Mr. MURRIN. Well, I think much of those data have been delivered, and we also hope they are being carefully considered.

Wayne, can you comment on this, please?

Mr. BERMAN. Mr. Rogers, we have had that data. It is certainly world class, as you said, and I have personally presented it at all of the Interagency Policy Council meetings. Dr. Darby was involved in presenting the same data, unfortunately making the case of the economic implications of these acid rain decisions. I hope we contributed strongly to what I think is a pretty balanced approach by the President and the Administration.

Mr. ROGERS. Well, I have a study, recently released, which projects the direct economic impact of the Clean Air Act amendments, with details on possible job loss both under the Administration bill and the Senate bill. You may not be aware of it, but I would like to have you review it and get back to us with your comments, if that would be possible, sir.

Mr. MURRIN. I will certainly do that, sir.

Mr. ROGERS. Thank you, Mr. Chairman.

Mr. SMITH. Mr. Carr?

USTTA USER FEES

Mr. CARR. I just have a few questions. I am always intrigued by the concept of user fees. In your submission on page 7 and again on page 43 you have indicated that this year you are going to be proposing assessing a fee on those who benefit from Federal travel promotion programs.

Who are you assessing?

Secretary MOSBACHER. That will be everyone except those from Canada, Mexico, and the Caribbean.

Mr. CARR. Who are you proposing to assess the fee on?

Secretary Mosbacher. Foreign travelers to the U.S. and returning Americans.

Mr. Carr. Now how are foreign travelers and returning Americans users of the Federal travel promotion program?

Secretary Mosbacher. Well, they are the beneficiaries of not only the monies that we spend on travel and tourism, but many times that we act as a catalyst for in services in travel and tourism around the world.

Mr. Carr. How does the foreign traveler—someone comes to this country—how are they a user of the travel promotion of the USTTA?

Secretary Mosbacher. Well, very often they learn how to get here and what to do and what goes on here, all the other aspects of American travel and tourism.

Mr. Carr. Just by passively learning about the wonders of our country, they are using the U.S. Tourism and Travel Agency? Is that it?

Secretary Mosbacher. Yes. We have travel and tourism services for them all over the world and overseas, yes.

Mr. Carr. Isn't it true that the beneficiary of the U.S. Tourism and Travel Agency is our own tourism industry? Isn't that the beneficiary?

Secretary Mosbacher. Well, we certainly hope so.

Mr. Carr. Yes. Well, aren't they, then, the users of a Government-sponsored promotion activity, as opposed to our guests from abroad?

Secretary Mosbacher. I guess I happen to think that since this is not only one of the best countries in the world to travel to, but one of the least expensive today, that those travelers from overseas are fortunate to be able to learn about where to go and what to do in this country.

Mr. Brown. Mr. Carr, the fees, as you well know, are assessed on the industry based on the number of passengers coming in.

Mr. Carr. So the fee would be assessed on——

Mr. Brown. The airlines and the shipping industry.

Mr. Carr. But that would be different than what was proposed in the past. In the past it was proposed a ticket tax, right?

Mr. Brown. It was proposed an average $1 per head, but to the industry. That was the point of the proposal: that is, the industry receives the benefit of the USTTA services and ought to——

Mr. Carr. Okay, and is it anticipated this is going to be passed on to the——

Mr. Brown. We don't know. That is the decision of the airlines and the shipping industry.

Mr. Carr. So this would be a tax on the airline industry and the shipping companies. What about an attraction such as Disney World? Are we going to tax them for the promotion of bringing them customers?

Mr. Brown. This proposal only relates to the airlines and the shipping industry.

Mr. Carr. Well, why wouldn't you propose that all tourism businesses, instead of just the carriers, pay?

Secretary Mosbacher. We have the Deputy Under Secretary of Travel and Tourism, Wylie Whisonant.

Mr. WHISONANT. I have discussed this to some degree [inaudible]. We had a discussion on that but it was primarily on [inaudible]. It is not a tax. It is a user fee, and there is a distinction.

Mr. CARR. Well, I know there is a distinction. I don't know whether you were there, but a couple of years ago when the late, great Mac Baldrige was sitting in that chair right there, we had this exact same discussion. I asked the Secretary if he could tell me the difference between a user fee and a tax, and he said with a semi-straight face that it is a tax when it is proposed by a Democrat and it is a user fee when it is proposed by a Republican. [Laughter.]

But the fact of the matter is, I think this is getting pretty far from a user fee. I am not opposed to user fees, incidentally. But you know, the thing that bothers me about this is, this would be akin to Secretary Mosbacher sending me an invitation in the mail to come to one of the very famous, elegant Mosbacher parties, and then when I get to the Mosbacher front door, Secretary Mosbacher asks me to deposit in a little cup next to the door, the 25 cents for the postage that it cost him to send me the invitation. [Laughter.]

Now we are inviting our friends abroad to come to this country because they are going to spend money here, and isn't it kind of unseemly that we would tax our guests?

Secretary MOSBACHER. Maybe we should equate it more to something both Republicans and Democrats are used to. How about calling it a fundraiser?

Mr. CARR. A fundraiser? I see. [Laughter.]

Well, I am used to that, yes. [Laughter.]

I ought to get you to come to one of them. [Laughter.]

Secretary MOSBACHER. You come to mine, I will come to yours. [Laughter.]

Mr. CARR. Well, I just want to signal, I guess, by this good-natured discussion that there are a lot of us on Capitol Hill who have real serious questions about a so-called user fee in the USTTA area. Indeed, if USTTA is to have a user fee at all, it would seem that our own industry, who are the beneficiaries of the promotion—and they may well turn it around into their price structure, we understand that—but that if there was a user fee, it ought to apply to all of the tourism and travel industry, and perhaps be trust funded for only USTTA purposes.

Under the current outline, I understand here that the previous Administration sought really to raise more money than would be requested for the activities of USTTA, and a lot of us would like to support a larger appropriation for that. I think we could even find ourselves bending our definitions a little bit, if all the money was going to the USTTA.

Secretary MOSBACHER. Excuse me.

Mr. CARR. Go ahead.

Secretary MOSBACHER. I was just going to agree with you, in that we now have a travel and tourism industry that is over $42 billion that comes in. For the first time, about $41 billion in 1989 went out, so we have a net trade surplus in the travel and tourism area, so I think we all agree that it is very important, what we are doing.

I guess no one more than this Committee knows the budget constraints, so we are trying to find a way to make it all work. In many other countries that I have been in, they charge you from $1 to $10 just to get out.

Mr. Carr. Yes. That I don't like either. That is the kind of fundraisers I go to. They charge you to leave. They don't mind you coming; they charge you to leave.

Anyway, I would say too that the total appropriation requested is very, very small. I know our friends over at USTTA do a good job, but relative to the promotional activities of some of our foreign competitors, in terms of seeing Koala bears and other things on our TV sets nightly, extolling the virtues of Canada and Australia and all other places, we really don't do as much of that as we might. That would take some pretty significant dollars to do that. You are not going to do that on an appropriation of only $13 million.

Anyway, let me not take up too much time. Anything you can do—and this comes from those of us who are very active in the Congressional Arts Caucus. I know that you are a big supporter and lover of the arts. Whatever you can do to protect intellectual property is the most important. That is one of our biggest exports, and because it is intangible we tend not to realize it.

I learned the other day that Japan does not recognize copyrights of non-Japanese that are older than 1978, and the bulk of a lot of our music is in that period before 1978, and they are just pirating it. I talked to Carla Hills about that when she was before us the other day, and I know you share our belief in that.

One small thing, but it means a lot in Michigan. You know, we have the automobile industry in my state and various automobile companies and parts suppliers to name a few. We have an automotive parts industry office in Japan which is financed in part by the Motor and Equipment Manufacturers Association and in part by your department, but the funds come out of TAA.

ITA—ELIMINATION OF TAA PROGRAM

In the Trade Adjustment Technical Assistance Program you have a sub-program over there called the Market Development Cooperator Program, and yet your budget proposes eliminating the TAA program. Putting aside for the moment the question of whether that is a good idea or not, I would like to get some reading from you about this small activity in the auto parts and equipment area that is going on in Japan, that is funded through TAA now, and whether in your perfect world, if TAA would be eliminated, there would be some other source of funding for that office over there.

Secretary Mosbacher. Our Under Secretary of International Trade, who has that in his department, is right here. Mike Farren?

Mr. Farren. As a matter of fact, I was over in Japan last week and had an opportunity to talk with Japanese auto manufacturers. The MEMA office in Tokyo is working out extremely well as the interlocutor between purchasers of auto parts in Japan and the U.S. industry here.

With respect to funding, we are providing on a gradually decreasing basis the cost of maintaining that office. Frankly, it is our hope that within a relatively short period of time the industry will be in a position to pick up the full cost of the office, when there will be justification that it is going to work.

In the short term we would certainly look for other resources available to offset whatever lost funds complete elimination of TAA would result in. Our view is that under any circumstance we are looking at just another year or two before the industry will be able to clearly justify the full cost of operating the office.

Mr. **Carr**. I thank you for that testimony.

Thank you, Mr. Chairman.

Mr. **Smith**. Mr. Regula?

Mr. **Regula**. Thank you, Mr. Chairman.

Nice to see you, Mr. Secretary. I want to say that Mr. Farren was out in our district and did a terrific job in talking to people. This is part of the outreach process that I think is so necessary in your office, to reach the small business people and give them encouragement in trying to export. They are still uneasy about what is involved in exporting, and yet that is an essential element, so I hope you will do a lot more outreach. I know that you have been encouraging people to get into Eastern Europe, as a result of some of your experiences over there.

I have read your statement. It is an excellent statement.

Given the magnitude of the goals that you have established for yourself, I pray for your success, because the standard of living of the next generation is what is really at stake in all of this.

My colleague here characterized you as the Secretary of Defense, and I think perhaps I would go more for Chairman of the Joint Chiefs. I say that because it seems to me to accomplish the objectives that you have established here, you are going to need a lot of help from many other departments in Government. It was mentioned that you are getting better cooperation out of the State Department, and I think that has been a problem in the past.

IMPROVED COOPERATION WITHIN THE ADMINISTRATION

I would be interested as to how much cross-pollination there is within the Administration, recognizing that education is a key element in your success; quality—you mentioned these things—tax policy, in terms of investment, so that our industries can be competitive; environmental, obviously. I think we are going to be in a decade of dynamic tension between the economic issues and the environmental issues.

It is quite evident in the Clean Air Act.

So I would be interested in your comments on what is happening in terms of making it a total effort as far as the Administration is concerned.

Secretary **Mosbacher**. Mr. Regula, you are absolutely right. It does take the cooperation and effort of many of the parts of the Administration. For the most part, I have found that we have had a very, very good cooperative effort.

Mr. Murrin was Chairman of the Defense Manufacturing Board for the Defense Department. Mr. Cheney and I have been friends for many, many, many years, almost as many as some of you have been with him.

We have worked better with the Defense Department, after the first few small brushes, we have gotten together on a lot of things. We are working very well together, I think. We made a good joint effort on the Korean fighter. Frankly, I am not sure we could have accomplished what we did without doing it together.

The State Department I have already talked about. Incidentally, the Defense Department has been more cooperative on truly zeroing in on those things, as far as export controls, that have a more direct use militarily, and releasing the rest. We are not ever going to totally agree, and I am not sure we ever should, because their primary goal is military security and ours is economic security, and we both believe in each other's, but not to the same degree.

With USTR, they actually do put together the trade agreements. That is what they are tailored to do. We handle the trade promotion and helping the private sector move into these countries. We have worked together on those very well. We support them with most of the data they use, whether it is the GATT-Uraguay round or many of the other trade agreements.

With Treasury, we work with them constantly, and again well. All of these interagency processes go on. As a matter of fact, we sent a cable from Czechoslovakia the night before last which would be primarily Treasury's effort on some agreements for how U.S. companies would be taxed, or taxed not too much, for going into Czechoslovakia.

And the President, as many of you know, is extremely, extremely important in our trade promotion and free and fair trade. So I think we have a good team, maybe a couple of weak links here or there, but we have a good joint team working on this same set of priorities that I believe are the top priorities for virtually all of you, regardless of party. We will continue to work on it, but if you have any specific questions on it, I will be glad to try to answer.

Mr. **Regula**. Well, I am glad to hear that. I think too often we have turf problems, and we forget that we are one team. It seems to me that in the economic Super Bowl in which we are going to be in the future, we are going to have to have a Team America, and not Team Treasury and team each individual. I am pleased that you are involved in that kind of an effort, and it perhaps would establish a benchmark for the future.

What success are you having on the fair steel agreements?

STEEL AGREEMENTS

Secretary **Mosbacher**. The steel agreement, we have gotten—what is it?—19 agreements with 20-some-odd countries. We will get that for you in a minute, but I will tell you we have been very happy with the short supply agreements. We have kept them within the 30-day and the 15-day constraints that we said we would, and it has worked. We have had quite a few of them.

Yes, we have 10 bilateral consensus agreements with 21 countries, and we have 18 VRA agreements with 28 countries. In the short supply area, we have the number of actual cases here. We have completed five cases, and granted short supply in four of the five. These had to do with over 24,000 metric tons and, as I said, were all completed in the 15- or 30-day review. As a matter of fact, right now we have five 15-day reviews going on, and we expect to complete them all in a timely fashion.

Mr. **Regula**. Mr. Chairman, I have two questions I want to submit for the record. They are rather complex.

But one last question, Mr. Secretary: What advice would you have for the Congress as to what we might do to make a more competitive environment for our business community, recognizing the importance of that in the years ahead?

ENHANCING THE COMPETITIVE ENVIRONMENT

Secretary **Mosbacher**. There are a few things we can do. We talked a little about antitrust laws, which are extremely important.

Mr. **Regula**. I would agree with that.

Secretary **Mosbacher**. Also in the legal area, we have to do something about the tremendous costs of product liability. Certainly everybody has sympathy for those who are unjustly hurt, but the kind of damages that have been awarded, and punitive damages, have made us uncompetitive around the world compared to other countries that over a year give out a fraction, I mean a minuscule fraction, of what we do in those areas.

We have to get lower costs of capital. I would say that is an absolute essential, and to do that we think the capital gains tax reduction will be a major part of it. This long-term family savings plan where it goes in for seven years and it comes out tax-free, is another factor. It does two things: It lowers the cost of capital and it makes us think longer term, which is another thing we don't do enough of in this country.

Mr. **Regula**. That is true.

Secretary **Mosbacher**. On top of that, of course, we have the Education and Quality Programs. Congress passed the Malcolm Baldrige Quality Act. I think it is very important that we pursue this. Tom Murrin has done a tremendous amount of work on this, and has a background of heading the part of Westinghouse that, right after he left, due to his work and others, won one of these Malcolm Baldrige awards.

So we are pursuing trying to have that thinking permeate all of industry, not just manufacturing. As a matter of fact, the service industry and travel and tourism we talked to also, need to bring their quality up to world-class, or we won't be able to keep this kind of net balance. So there is a lot to do, and we appreciate your cooperation in working with us on it.

Mr. **Regula**. Thank you, Mr. Secretary.

Thank you, Mr. Chairman.

Mr. **Smith**. Mr. Moynihan—excuse me, Mr. Mollohan. [Laughter.]

Mr. **Mollohan**. Thank you, Mr. Chairman. Wrong chamber. [Laughter.]

Picking up on your last answer, Mr. Secretary, you have stated that one of your goals is to institute a Quality Management Program at the Department of Commerce. Could you tell us in more detail what you mean by that and how you intend to implement it?

QUALITY MANAGEMENT PROGRAM

Secretary MOSBACHER. Yes. It was a joint idea of ours, and Tom Murrin has had so much experience in this and works on it day to day, I would rather let him answer it.

Mr. MURRIN. Besides, the Secretary told me I have to get off my butt and get moving on it. [Laughter.]

There are two principal stimuli, sir, that move us in that direction. One is, as you know and as you have addressed very constructively, we play a key role at Commerce in supporting American industry and its competitiveness, and we all agree that quality improvement is a key factor in that regard. So we would judge it inappropriate if we didn't practice in-house what we are preaching and promoting.

For example, just this morning, with some of the other folks who are here, we had a presentation in our executive offices to a young man who has made some outstanding quality and productivity improvements. The Pride Award, we are calling it. It is going to get a lot of publicity, and we hope it will engender a lot of interest and support throughout the 30,000-plus people who are involved at Commerce.

In that spirit, we have organized the Quality Improvement Council. We have kicked off sessions of that. At the Chairman's suggestion, for example, one of the most recent Baldrige Award winners, Xerox, will be coming in shortly to brief both the Quality Council and, in addition, most importantly, the Secretary's entire senior staff, numbering about 40 people.

The other key stimulus that we have is, very frankly—and we may be a little premature here—we want to be the model for all of the Federal Government in demonstrating, again, in-house, in Government, in an agency like ours, that the principle of doing the right things right the first time will translate to better customer service, employee satisfaction. We don't have quite the same relationship with shareholders as a business does, but in a sense you are our shareholders and board of directors, and we hope this pleases you. This is another factor that seems to satisfy the public and the media.

So we assure you it is a top priority initiative. We are drawing not only on our own expertise, which is considerable, but that of industry and other organizations. I might add we are greatly heartened that OMB is launching a Federal Government-wide initiative, and we are taking a lead role in that. We see that to be a very effective way of networking the transfer of know-how and engendering a lot of interest. So it is real, and we think we are going to be making a lot of progress.

Mr. MOLLOHAN. Are you linking with the private sector initiatives and educational initiatives that are promoting total quality management throughout the country? Are you familiar with them?

Mr. MURRIN. Well, yes. Oversimplified, as you know, the initial efforts, particularly relating to the Malcolm Baldrige Award process, concentrated understandably on manufacturing. As the Secretary just mentioned, increased emphasis is now moving into the service sector.

One of the happy developments which we didn't fully anticipate is that much of the education field and the health care field are also becoming tremendously interested. The know-how, we are finding, that relates to successful quality improvement in manufacturing is largely transferable not only to service but to those other sectors like education.

This is proving to be a very worthwhile effort, and we are finding a great deal of interest around the country. Several States, as you may know, have taken at the Governor's level top priority commitments to this, and we are linked in with those also.

Mr. MOLLOHAN. Thank you.

Mr. Secretary, this isn't a question, it is just a statement of support. I notice you treat the EDA very terminally here, and I just wanted to express appreciation for the work that the EDA has done in my district. Generally it has meant a lot to us in economic development. We have used them and worked in partnership with them very effectively. I understand your position here, but just a word of compliment to the people who are administering that program. We appreciate their good efforts and appreciate working with them, and if the program should continue, we look forward to working with them in the future.

Thank you.

Mr. SMITH. Mr. Kolbe?

Mr. KOLBE. Thank you, Mr. Chairman.

Mr. Secretary, welcome. I too join with my colleagues in welcoming you and telling you that I think your public statement today is certainly outstanding in the sense of your priorities for the Department. I certainly commend you for that.

I would like to follow up on some other questions that have been raised dealing with the Foreign Commercial Service. But first, I noticed in your press release for the Department's budget you said that you were going to be requesting additional resources this year to more effectively allocate district staff, district office staff. How much are you asking for this purpose, and what are you going to actually do with that money that is going to be used for allocating district staff?

ALLOCATION OF DISTRICT OFFICE RESOURCES

Secretary MOSBACHER. Well, we have a $570,000 request allowing for reallocation of 19 USFCS district office trade specialists. We will use a planning model to identify where staff resources can best be used, a model based on a number of economic factors and other factors, manufacturers by State, value added from size and dollar value, and really all the economic data that leads us as to where we can get the biggest bang for the buck.

Mr. KOLBE. So you expect to make some substantial changes within those district office staffs as a result of this?

Secretary MOSBACHER. Yes, but——

Mr. KOLBE. I am not sure of the extent to which this reallocates the whole district office staff operations.

Secretary MOSBACHER. Yes, it is only 19, 19 out of—Assistant Secretary Schwab is here, who can give you more specifics on it.

Ms. SCHWAB. That is 19 out of 235, so it is a relatively small——

Mr. **Kolbe**. Okay. Those are relatively small numbers that you are looking at.

Mr. Secretary, on the question of the FCS, you gave the number of 107 positions, and you broke that down. I missed the number of additional positions there would be in Japan. Can you tell me that again?

Secretary **Mosbacher**. The number of positions where?

Mr. **Kolbe**. Japan.

Secretary **Mosbacher**. Japan had 10 nationals and 16——

Mr. **Kolbe**. The total is what I wanted. Sixteen is what I hear.

Secretary **Mosbacher**. Yes, there are 16 total.

Mr. **Kolbe**. Okay, thank you. I am particularly interested in this because it seems to me just as we have been making—with your efforts and those of Ambassador Hills and the Administration and Congress—greater efforts to open up our trade in Japan, and we have been expending greater resources in that area. It seems to me that the European Community has been the greatest beneficiary of our efforts. They have tremendously increased, as I understand it, their trade representation in Japan in recent years, and they have seen as a result of that, perhaps a decline, a much greater decline in the trade imbalance that they have suffered with Japan than we have.

It seems to me that this area is going to require an even greater amount of our resources. I don't know if you wanted to comment on that. I will give you a moment to comment. Let me just make one other point on that. I note in looking at our efforts, in 1989 we had $4 million that was spent in our efforts in Japan. That corresponded to $14 million that Japan spent here in the United States on its trade activities here.

Secretary **Mosbacher**. Well, I think we need to keep bolstering. A little earlier I was talking about the Japanese innovative effort which they have just launched for importing on their side, and it is matched with our exporting. We are putting the MITI effort for imports together with our Department of Commerce efforts for exporting, and Director General Schwab and her counterpart in MITI have been meeting together.

We are working on opening areas of mutual interest, and we are going out to our exporters in this country with the story that Japan claims to be opening up for imports. Let's test it. Let's hope they are truly sincere in this. We have to take them at face value that they are, and let's see if we can build some exports from us and imports to them. It is going to take both the additions in the U.S. that we talked about and these in Japan, and maybe more in the future.

Mr. **Kolbe**. All of this effort, though, can be very quickly wiped out as the result of currency differentials? I am thinking of the battle going on right now by the Japanese to try to protect the yen. If the yen continues to fall in value, it is going to significantly impact our ability, the efforts we are making to be more trade competitive.

ECONOMIC DATA COLLECTION ISSUES

Let me turn, if I might, to the area of economic data collection. I am very interested in your activities in this area. Dr. Darby had a chance to talk some about this yesterday.

Certainly the collection of good and usable statistics is absolutely vital. I sometimes despair when I hear people say, "Well, the Census, the only thing they do is count people, and we should only appropriate money once every 10 years for them to count people." Obviously that is not the case. The kind of data that is collected on an ongoing basis by the Census is absolutely vital if we are going to have a competitive posture in the world, it seems to me. I am pleased to see that you have made this a priority area.

Yesterday Dr. Darby had a chance to mention the Boskin plan of improved Government economic statistics, but I was not able to ask him about that. I am wondering if he could just tell us a little bit more about this, what the plan is and whether or not this will entail legislation? Will you have legislative requests for this? Are there other initiatives in this area of economic data collection that you are going to propose? Somebody else may want to discuss this.

Secretary **Mosbacher**. Well, since Dr. Darby was one of the authors of this, along with Dr. Boskin, if you don't mind we will let him give it to you with much more specificity.

Mr. **Kolbe**. Absolutely.

Mr. **Darby**. Dr. Boskin and I testified on this this morning and he gave a very good statement. I hate to try and summarize, but he observed in essence that we are very concerned in the Administration about the decline in the economic statistics, the risk that this puts the country at, and the disadvantage it gives us competitively in terms of business decisions, and so the Administration has embarked upon a program of improving the economic statistics of the United States.

The first step, which is embodied not just in our budget but in other budgets, reflects what we can do immediately to bring about an arrest in the decline of the statistical system and begin to turn it around. The Boskin working group is continuing to meet to try and come up with a longer-run plan as to what to do next, and this will be completed by this summer, in order to be in time for the next budget cycle.

For this budget cycle, we have in terms of the Census—well the Commerce agencies, basically the BEA is attempting to arrest the decline in the national income accounts and in the international accounts right away, and to move towards international standards, a system of national accounts. The Census is trying to begin to get the high-tech industries, the service industries, more adequately represented in our statistics, and to get information on disadvantaged people through restoring the CIP, and bring the processing of the basic unemployment data, the current population survey, up from 1960 standards to 1990s so that we can come up with timely and more complete data on these important unemployment statistics.

Mr. **Kolbe**. Do you anticipate this is going to require any legislative changes, or is it just budgetary?

Mr. DARBY. I am not—there may be two areas of legislative changes. One concern has been allowing the BEA and Census to share data in the international area, so that the Census data which is at plant level can be combined with the BEA data which includes foreign ownership at the firm level, and we can begin to put out local and State data on foreign ownership and foreign investment in the United States. That is one issue which it is not clear yet whether that will require legislation.

The other area which was raised yesterday is eliminating the cotton ginning report, which is the only remaining agricultural statistic done by the Census, other than the Census Bureau.

Mr. KOLBE. You led right in, with a previous comment there, to one other question I had on this data collection issue, and that is data on investment trends. We passed as part of the trade legislation, as you know, the so-called Bryant amendment, a requirement for gathering data on this. It strikes me, from what little I have been able to see, that we have dismayingly old, inaccurate and imprecise information on foreign investment in this country, and for that matter U.S. investment abroad. Is that going to be a major part of this effort, to get better and more precise data on this?

Mr. DARBY. Yes, sir, it very much is. We presently have before this committee and the Senate counterpart, reprogramming to try and just maintain our current schedule, and in the Fiscal Year 1991 request a major part of the increases for BEA, roughly a quarter, are for improving on that and combining with the Census, and in the Census request to really go forward and provide better and more timely data. We are hoping, for example, to go from annual to semiannual reports on some of the most important investment results.

Mr. KOLBE. Thank you. I want to make it clear that I don't entirely concur with the uses some people in Congress want to make with this data on foreign investment, but I certainly think gathering the data is worthwhile.

Mr. Secretary, let me ask you just one question with regard to Taiwan's application to join GATT. We had Ambassador Hills before our committee earlier this week, and I asked her a question about her position, and she was very circumspect about that and you may well be, too.

I realize it is not your primary area, and you are not the primary agency on these kinds of negotiations, but you obviously play a major role in helping to formulate our trade policies. I am wondering if you have a personal view that you would like to express with regard to this application.

OPEN MARKET FOR U.S. GOODS—TAIWAN

Secretary MOSBACHER. Well, Mr. Kolbe, I would say I am more concerned, regarding Taiwan, about the fact that they are now our second largest trade deficit, second only to Japan. Now there almost is no second because Japan is almost $50 billion and Taiwan is close to $14 billion, but at this point there is no one else over $10 billion. Canada is $9 billion something, and Germany is $8 billion plus.

So I think what we need to do with Taiwan is, under the constraints of not having the direct relationship, hope that they can have an open market for U.S. goods, as we certainly do for Taiwan goods, and we hope that will be coming about, one way or another.

Mr. **Kolbe**. Yes. Is it your view that membership in GATT could assist, could help that?

Secretary **Mosbacher**. Well, GATT really is under Carla Hills, so I am afraid you have to use whatever answer you got from her, but I am concerned about Taiwan. I am sure the GATT membership is an important aspect, but I am kind of bottom line oriented, and the number bothers me more than any other aspect of it.

Mr. **Kolbe**. All right. A final question, Mr. Chairman, in the area that I have a lot of personal interest and involvement with, and that is Mexico.

I want to take this opportunity to thank you for the leadership that you have taken in this area. You have been very aggressive and active in working with Mexico to bring U.S. businesses to Mexico, to work to help improve our trade relationship. Last fall you made some remarks that warmed my heart, since I have been the advocate and chief sponsor of legislation expressing the sense of Congress that we should negotiate a free trade agreement between the United States and Mexico. This is in the nature of a real soft ball to you, to ask you just to reiterate here your views on that. Perhaps with the passage of three or four more months, you might want to update those thoughts.

U.S. TRADE RELATIONSHIP WITH MEXICO

Secretary **Mosbacher**. Well, I have been heartened, Mr. Kolbe, in what we have seen Mexico doing and the great progress they have made. As you know, they are now our third largest trading partner in the world. Of course they are our neighbor to the south, with over 3,000 miles of common border. They have gotten their inflation under 20 percent for the first time in years. We are up to over $50 billion in trade with them. We find that they are doing, as far as opening up for trade and investment, everything they said they would do when we talked some time ago.

I think long term, still, we can and should move towards a free trade ageement, but they have some constraints as far as kind of crawling before they walk and walking before they run. They are close to the middle stages of that, and I hope and believe in the long term they will be very interested in a free trade agreement, also.

Mr. **Kolbe**. I appreciate that. It seems to me that they are a pretty fast-learning toddler, as far as I can see, doing very well.

Secretary **Mosbacher**. Oh, they are doing very well.

Mr. **Kolbe**. And I am also struck, in my conversations with them and with government officials and leaders down there and here in Washington, at how the rhetoric has changed dramatically on their part. They no longer reject this idea out of hand, but are quietly saying that they also believe this is not only inevitable, but perhaps the right thing to happen.

Mr. Chairman, thank you very much, and thank you, Mr. Secretary.

Mr. Smith. Are any of these Foreign Commercial Service personnel for the Soviet Union, within the increase we are talking about?

ENHANCING FOREIGN COMMERCIAL SERVICE IN SOVIET UNION

Secretary Mosbacher. The Soviet Union? Yes, we are increasing two of the Foreign Commercial Service personnel and four nationals.

Mr. Smith. Now would those personnel—out of Moscow or Leningrad or the Republics?

Secretary Mosbacher. Go ahead and answer.

Ms. Schwab. We currently have two Americans in Moscow and no one in Leningrad. At the present time we are looking at enhancing the capability in Moscow, but also have been looking at the possibility of adding to Leningrad. We have a problem with the national employees because obviously we do not employ Soviet nationals.

Mr. Smith. Well, of course there are a number of republics over there. We don't have consulates in those republics. The only consulate we have is in Leningrad. But with the unrest we see in those republics and the demand for more autonomy—Lithuania, Estonia, Georgia, the Ukraine—if we don't have a consulate there, I guess it is rather difficult, but we could have a different problem there than we have in the rest of the Soviet Union. Do you have any plans with regard to this?

Secretary Mosbacher. Let me just add on this that we had—and then let the experts take over—we had a Joint Commercial Committee meeting with the Soviets a few months ago, in which we talked about moving out into the states or provinces, and we still hope to be moving in that direction but I don't think we are quite ready.

Ms. Schwab. At the moment there is certainly enough traffic running through Moscow so that the two people we have covering the whole Soviet Union are fairly well occupied. Up until recently there have been travel restrictions as to where embassy officials could go outside of Moscow. That obviously would have a bearing on their ability to travel beyond the immediate vicinity of Moscow.

Mr. Smith. Well, do you have Foreign Commercial Service personnel stationed in similar situations, where there is no consulate?

Ms. Schwab. Yes, obviously there are countries where we don't have as many consulates as we would like.

Mr. Smith. Do you have Commercial Service personnel in cities where there are no consulates?

Ms. Schwab. No, we do not.

Mr. Smith. This is a big problem the State Department faces, too, but what are we going to do? I mean, if you start putting consulates in one or two of those republics, all of them want a consulate. Another way to do it is to put offices, you know, a couple of representatives in some of those republics, but those republics have a different situation than you have in the Soviet Union as a whole. You haven't made any decision, obviously, but you are recognizing, aren't you, that there is a different problem in each one of these republics? The Lithuanians or the Ukrainians, or even the Georgians, especially—they are not going to think that somebody in

Moscow can be responsive to their needs. I doubt if somebody in Moscow can fully service the needs that you have in some of those republics that are a long way away and have different ethnic backgrounds, different products, different attitudes toward trade.

Also, Mr. Secretary, you are proposing—have you visited any of the Small Business Development Centers? Are you acquainted with the Small Business Development Center program?

SMALL BUSINESS DEVELOPMENT CENTER PROGRAM

Secretary **Mosbacher**. No, I have not visited any of them to date, but——

Mr. **Smith**. Well, the Small Business Development Centers were set up—I happened to author the bill a few years ago. It has been a tremendously successful program, and we have I think only five or six States that are not in it now. What we are doing is encouraging States to use their existing institutions—colleges, universities—and the expertise they have there to help small businesses that are getting started, maybe marketing advice, advice on how to get a patent, these kinds of things. They have to qualify as a small starting business to start with.

The law requires them to put up at least as much non-Federal money as there is Federal money, and so they are not going to do that if they don't think it is worth something, and we have a formula set up. It was never intended that it just be set up temporarily as a pilot program and phased out. It is a permanent program.

As we increase the number of SBDCs and increase the reliance on SBDCs, we have reduced the number of personnel in the management section of SBA, because these people are much more effective than taking an ex-Colonel and putting him on the payroll, you know. So they haven't liked it, but we have gradually reduced them and increased here.

But for several years now the Administration has sent up a budget proposing to phase out SBDCs, and you have done that again this year. Last year they got $50 million, and you have a proposal to cut it back to $30 million. Now under the law—and the law hasn't been changed to take care of inflation—there is a maximum $65 million pot, and then everybody is entitled, if they have an application and put up the money, at least as much up to their share of the $65 million pot, so it won't get more than $65 million.

But this is a good program, and it seems to me that it is inconsistent with your general approach to economics and development and everything to be wanting to phase out a program like this.

Secretary **Mosbacher**. Mr. Chairman, Ken Bolton is Assistant Secretary for MBDA. I think he can fill you in on some of that.

Mr. **Bolton**. Mr. Chairman, we are familiar with it. That program is administered by the SBA.

Mr. **Smith**. Right.

Mr. **Bolton**. And that of course is different from the program that we administer. It is an important——

Mr. **Smith**. But that is in our budget, though, and the Commerce Department proposes the reductions. It is not your program, but SBA is in our budget.

Mr. **Bolton**. I understand. I think if we look at the way that program operates and we look at the way our program operates, with the Minority Business Development Centers, our technicians provide one-to-one technical assistance directly to minority business firms. The SBDC is built around centers at universities——

Mr. **Smith**. No, it is one-to-one. The small businessman has an idea he doesn't know what to do with and he can't afford a $100,000 marketing study. He goes to the SBDC center. They sit down with him. They give him advice. They get him in touch with the right people. It is a one-to-one deal.

Mr. **Bolton**. Which is often one of our Centers.

Mr. **Smith**. One of your centers?

Mr. **Bolton**. Yes. We get referral clients from the SBDCs.

Mr. **Smith**. Oh, yes, they may refer them there occasionally.

Mr. **Bolton**. Yes, sir. We are not proposing in our budget——

Secretary **Mosbacher**. We are not proposing any reduction in the SBDCs.

Mr. **Smith**. Well, yes. It is in the President's budget, though, and under the same general category here.

Secretary **Mosbacher**. But not the Commerce Department. You are talking about the Administration budget.

Mr. **Smith**. Well, but you are proposing an increase in the Business Development Program, and I am wondering about that because the Inspector General and the GAO have found some big management problems in this program. Is this the time to expand a program that has big management problems?

EXPANSION OF BUSINESS DEVELOPMENT PROGRAMS

Secretary **Mosbacher**. Well, we have, by MBDA and programs that we do with it, we feel we get a lot of good add-ons. We get it through working with—they are working with Travel and Tourism, and we have a list of the ways that MBDA works in our Department to give them a multiplier effect. That is not only with Travel and Tourism but the Technology Administration that helps the minority engineers speed the commercialization of new technology, NTIA with working on minority-owned firms in the telecommunications industry. So we feel that we are not trying to compete with SBA in any way, because they have a good program too, but we feel the MBDA programs get particular help and are particularly important because they work with our other agencies and they are represented by a person who is a Cabinet officer, so we feel it is a very effective organization.

Mr. **Smith**. Well, I look at the positions that this additional money would be spent for, and I see that there would be five positions at GS-13 and three in GS-14. Now GS-13, that is about the easiest position for which to qualify a political appointee that there is in the Government. To be a GS-11 or a 12, you have to have some expertise. [Laughter.]

But to be a GS-13, you can qualify most anybody if you can show that he at one time supervised somebody.

Secretary **Mosbacher**. One exception to your statement, and that is your secretary. [Laughter.]

Mr. SMITH. If that is what you are doing, why are these additions in the area where it is easiest to qualify political appointees?

Mr. BOLTON. Those positions are just a few positions and they require specific skills that we don't presently have.

Mr. SMITH. For specific what?

Mr. BOLTON. Skills, skilled personnel. In the area of telecommunications, for example, while we have administration under the NTIA that focuses on telecommunications policy overall, what that will allow me to do is have a person on my staff, one person, who could then interface with the NTIA to generate opportunities in telecommunications.

Mr. SMITH. Well, if they had to have special skills in telecommunications like you are talking about, you wouldn't try to qualify a GS–13. You would probably get an 11 or a 12.

Mr. BOLTON. I think we probably need someone with pretty good experience in that area, at a 13 or a 14 level. Now that is a projection, and whether we hire a person at a 13 or a 14 doesn't have any bearing on the position requirement, but we need someone with professional and technical skills, and in order to get someone at that level we are going to have to have a 13 or higher.

Mr. SMITH. Well, I remember, Mr. Secretary, when this agency was set up. Maybe you don't know the history of it, but it was set up by Executive Order by President Nixon, when he decided he wanted to win with 80 percent instead of 75 percent, you know, and so they had to have some political appointments to make, and it has been existing ever since. It has been heavy in those areas. I think it is one you ought to watch. There is a mission, but it is more than just to have a place for some political appointees that you want to work in.

Secretary MOSBACHER. Mr. Chairman, I totally agree with you. I think—and I have been to some of these meetings where the private sector is working with these minority business developments, and I agree it is obviously not for political purposes, shouldn't be, and they are doing some good things. We made a survey that showed 80 percent of the people they have been dealing with are satisfied with the progress. I am sure it takes a lot of improvement, still, but we are getting some results.

Mr. SMITH. Fortunately or unfortunately, the Inspector General and the GAO each did a survey, and they were not very complimentary.

Mr. Rogers, do you have any questions?

Mr. ROGERS. Well, I mean, the GAO has sort of got a tainted view these days, in my judgment. I am not sure they are the objective observer of things that they once were, unfortunately. I don't know about this particular issue, but I am not too happy with GAO at this point in time, Mr. Chairman.

Mr. Secretary, let me close down the shop here as far as I am concerned. I think we would like to know the broad strokes of what you would like for us to do, other than the nitty gritty of your budget request. We know you have—your interest is in technology and in competitiveness on the American front and so forth. In your budget request you increase monies considerably for the ITA, for the economic affairs and statistics, NOAA, NIST; you deemphasize, to say it mildly, EDA; you deemphasize public telecommunications facilities grants, and of course the Census because of the wind-down of the program.

If push comes to shove and we begin to run short of money, which may or may not happen—one never knows—what do you want us to be sure that we don't leave out. What are the important, the very important things to you?

CONCLUSION

Secretary **Mosbacher**. Well, you know, these things are all interactive, so I want to tell you that we have gone through a lot of painstaking efforts to get our priorities what we think are right now, before we submitted it to you gentlemen, so we don't want to change them any. I think you have very wisely focused, for instance in having our USFCS people out there in the front lines, in the trenches. There is nothing more important than that, but we have already built that up some, you know. If we had bigger budgets, obviously we would bring that up further, but we brought it up and cut back where we thought we could in other areas, so what we are submitting to you is the levels that we think are proper across the board, to the best of our ability.

Mr. **Rogers**. Well, let me close by saying thank you for a good job so far. You have assembled a good team of people and they are up on their business, and getting America back in competition. We have a long way to go yet. I don't know whether the success of the battlefields of the future will be determined here in the halls of Congress or in the board rooms and workplaces. I have my hunch that it will not be here. It will be out there. So we wish you well in getting the Government involved, not interfering in the marketplace but helping our companies compete in the world.

Thank you, Mr. Secretary.

Secretary **Mosbacher**. Thank you, Mr. Rogers.

Mr. **Smith**. Well, Mr. Secretary, we don't want to keep you. We will have some more—oh, Mr. Mollohan?

Mr. **Mollohan**. No questions, Mr. Chairman.

Mr. **Smith**. We will have more questions, and we will work with your staff on the answers for the record, but I want to say we want to help. I think we have the same goals, at least. We do want to help with exports and with jobs and business in this country.

Thank you very much for being here, Mr. Secretary.

Secretary **Mosbacher**. Thank you, Mr. Chairman.

[The following questions were submitted to be answered for the record.]

Questions Submitted by Congressman Smith

1990 Census

Question:

Congress cut $57.6 million from the FY 1990 budget request for the 1990 Census. Additional reductions were required by sequestration. What activities or improvements to the Census will the Census Bureau be forced to eliminate as a result of these funding reductions?

Answer:

We have been concerned that the congressional cuts of $57.6 million from the President's request for FY 1990, on top of previous cuts and cost absorptions, might compromise our ability to conduct a full and fair census. We contemplated making the vacant/delete check, which will cost about $64 million, contingent upon the mail response rate. The vacant/delete check improves the coverage of the census by adding persons in housing units that have incorrectly been identified as vacant or deleted. Based on the 1980 evaluations, 1988 dress rehearsal census, and other experiences, we believe following up on these units would add about 1.5-2.0 million persons to the census count. Based on our 1980 census evaluations, we expect that many of these are minorities who would be missed in the census.

Because of the coverage implications of deleting the vacant/delete check, we have resolved definitely to proceed with it as originally planned. We base this decision on operational considerations.

Question:

In light of these reductions, the absorption of the federal pay raise, increased mileage reimbursement rates, and other cost increases, will you be requesting an FY 1990 supplemental appropriation in order to carry out the census?

Answer:

Our ability to proceed as planned within the currently appropriated amount depends primarily upon the mail response rate, which we shall know in late April. As we have told this Committee before, we had requested an FY 1990 budget that assumed a 70 percent mail response rate (as compared to an actual response rate of 75 percent in 1980.) Given the Congressional budget cuts in FY 1990, if the actual rate in 1990 is at or near 70 percent, we may have a budget shortfall. In that case, we will need to look at options to cover the shortfall. If the actual rate approximates our 1980 experience, we hope to be able to proceed within existing funding levels.

The mail response rate is critical because we must visit each housing unit for which a questionnaire is not returned. We estimate that each one percent change in the mail response rate translates into approximately $10 million. However, it is difficult to predict definitively any budget shortfall which might result based solely on the mail response rate. Other factors that may affect the size of any shortfall include keying and enumerator productivity rates, attrition and the size of the census job applicant pool. Of course, other totally unanticipated setbacks, such as natural calamity, may also affect funding needs. We will be in a better position to address our funding situation when the mail response rate is known.

To the extent that we can achieve savings in currently planned operations over the next few weeks without compromising the census, we will make every effort to do so. Assuming existing planning parameters are met and there are no unanticipated setbacks or additional savings achieved, we now expect we may need an actual mail response rate of approximately 75-76 percent. We will monitor carefully the response rate during mid-to-late April and will keep the Committee fully apprised. We understand that supplemental appropriations have been required during past decennial years.

Adequate Security

QUESTION:

The ITA budget request also includes an increase to provide "adequate security for overseas commercial officers." I thought that was a responsibility of the State Department. What additional security is needed for your commercial officers overseas?

ANSWER:

These funds will be first applied to the needs of the positions hired under the Foreign Staffing increase request and secondly to unfunded needs elsewhere. Specific locations chosen will be based on the threat profile developed by the State Department. They will be used to provide residential and transportation security both for these new hires and existing staff.

This will initiate a replacement cycle for light armored vehicles, originally purchased with State Department funds which can not be used for replacements; communications equipment to link residences, vehicles, and offices; drivers trained in escape and evasion techniques; local guards for residences; and grill work and other securing devices for residences.

The State Department discontinued providing physical security improvements for the residences of other agencies at the start of 1989. Its funds for local guard forces have declined so that other agencies' personnel are not generally offered this protection. Also, the Inman legislation on behalf of the Department of Commerce funded only capital project improvements for offices.

Allocation of Resources

QUESTION:

I also understand that the Department is reassessing the allocation of its foreign and domestic resources. What are the concerns that have prompted this reassessment?

ANSWER:

There was a major change in exchange rates from 1985 through 1988. As the rates have appeared to stabilize, it is time to reassess whether our programs are located appropriately so we can assist U.S. businesses to maximize their exports.

The last major review of the allocation of overseas resources took place in 1984 and the results were implemented at the beginning of 1985.

The last major review of the allocation of domestic resources took place in 1983 and the results were implemented in 1984.

We are applying our domestic resource allocation model to determine where the most cost-effective situations exist for placement of domestic-based personnel.

Our overseas allocation of resources keeps emphasis on those areas with the greatest export potential for U.S. firms.

Allocation of District Office Resources

QUESTION:

Your budget request also includes additional funds for one year only so that ITA can "more effectively allocate its district office staff." How will a temporary increase for one year permit a more effective allocation of district office resources?

ANSWER:

These funds are for the one time expenses necessary to relocate approximately nineteen trade specialist positions. They will be reassigned where resources can be most effectively placed to reach the largest number of small and medium sized firms with significant export potential.

Competitiveness

QUESTION:

The Conference Report on the DoD FY 1990 Appropriations Bill (Report Number 101-345, page 117) directed the Executive Branch to report to the Appropriations Committees prior to obligating certain funds made available for research and development in high definition display technology (HDTV). The chief question to be addressed is to what extent the Federal Government should play a role in developing HDTV with commercial applications? The director of the Defense Advanced Research Projects Agency (DARPA) has not been able to obtain the views of the Department of Commerce on this question, yet your budget request includes an increase for NTIA to undertake research and advocate policies related to the development of HDTV systems. Why should Congress approve this request since the Department has not participated in a coordinated, Executive Branch position on this issue, as directed by the Conference Report?

ANSWER:

The Department of Commerce is promoting ways to improve U.S. industry competitiveness. As a part of this, Commerce is in the process of assembling a broad competitive policy package for high technologies, including HDTV, that will consist of initiatives to help support the competitiveness of U.S. technology companies. This package will focus on private sector activities rather than the defense-related goals of DARPA. Further, NTIA's effort is independent of DARPA's activities.

NTIA's budget request is important to promoting the further development of HDTV. NTIA will be undertaking propagation measurements and channel assignment studies of the television band to assess ways in which broadcasters may supplement their signals with assigned television frequencies to offer HDTV.

In FY 1991, NTIA will begin an analysis to develop and define the necessary objective performance measures of transmission modes alternatives by examining the components of video encoding, compression, and transmission techniques. NTIA's work under the FY 1991 initiative would ultimately lead to standardization of these performance measures and their implementation in microcomputer-based test equipment.

NTIA will continue to coordinate with the FCC Advisory Committee on Advanced Television Services, DARPA, MIT Media Laboratory and others. As an _ex officio_ member of the FCC Advisory Committee on Advanced Television Service, NTIA has been actively coordinating with the FCC on HDTV issues. NTIA has discussed numerous issues with the FCC staff and private parties involved in the development of recommendations for technical aspects of HDTV, including frequency use, radio signal formats, modulation, power levels, and antenna characteristics. Where appropriate, NTIA will provide guidance to the FCC on testing methodologies and examine the outputs for applications to NTIA's ongoing work in this area.

NTIA will use these data and the results of the Advisory Committee's conclusions to refine and extend its technical work in defining performance characterizations of HDTV transmission alternatives, evaluation criteria, and trade-off studies that include quality testing. The technical analyses will consider specifications for advanced video performance, spectrum use and efficiency applications, and cost factors associated with implementation with such alternatives.

NTIA will continue to participate in developing the appropriate specifications in standards-setting bodies (e.g., American National Standards Institute, International Telegraph and Telephone Consultative Committee, and International Radio Consultative Committee), to assure that overall U.S. interests in the advocacy of HDTV services are being satisfied.

FY 1990 Mandated Projects

QUESTION:

The FY 1990 Appropriations Act (PL 101-162) states, in part, in the appropriations language for EDA "... notwithstanding any other provision of law, $11,350,000 shall be used to make or complete each grant designated in Public Law 100-459 (in certain subsections) ... which has not been made and for which preapplication or applications have been filed ..." I understand that most of these grants have not yet been made and several of the applicants have been told to submit data and information by EDA that was never included or requested in the original applications. Why is EDA not following the law?

ANSWER:

The FY 1989 appropriation language identified 13 projects for funding. One of these projects was subsequently withdrawn by the grantee. Of the active 12 projects, EDA funded five in FY 1989. The remaining seven consisted of six public works and one technical project.

Four of the six public works projects were returned as they were ineligible for EDA assistance. These four projects were not located within a designated area, a legislative requirement that was not exempted until FY 1990 (P.L. 101-162). Upon enactment of P.L. 101-162, the four applicants were requested to submit current applications consistent with normal EDA procedures. The remaining two applications were retained in FY 1989, and EDA continued to process these applications although neither was awarded in FY 1989. The sole technical assistance grant was not awarded and returned as it appeared that a similar project had been maintained in Defense Department appropriation language. All five applications that were returned in FY 1989 have now been updated and are being reviewed consistent with the legislative exemption contained in the FY 1990 Appropriations Act. Following is the status of the seven projects:

1. Crownpoint Institute of Technology in the State of New Mexico: The current engineering analysis should be completed by late April. EDA will then work with the applicant to finalize the grant application.

2. University of Kentucky in Lexington, Kentucky: Approved.

3. Spindletop Regional Development Project, Beaumont, Texas: Approved.

4. Marshall University, Huntington, West Virginia: Approval expected within three to four weeks.

5. Des Moines, Iowa: Approval expected in seven to ten days.

6. Ankeny, Iowa: Approval expected in four to six weeks.

7. Southeastern Area Technology Development Center, Inc: Approval expected in the four to six weeks.

FY 1990 District and Area Planning Program Implementation

QUESTION:

On January 18, 1990, the Assistant Secretary for Administration, with the concurrence of the Department's Counsellor, strongly recommended to the head of EDA that he implement the district and area planning grant program in the same manner as EDA administered that program in FY 1989 at the same level of funding less only the sequester amount. I understand that EDA has not yet released these planning funds and has ordered reductions in 115 of the planning grants below the FY 89 level minus sequestration. Why hasn't EDA implemented the instructions of the Assistant Secretary and the Department's counsellor?

ANSWER:

EDA is implementing its program consistent with the FY 1990 Appropriations Act and last year's process. The total program amount available in FY 1990, after taking into account the mandatory sequester, is $15.1 million, slightly less than last year's total of $15.3 million. In addition, EDA management is redirecting some $560,000 from other grant programs to provide a total level of $15.7 million.

University Center Graduation

QUESTION:

I understand that EDA is implementing a program of "graduating" certain university centers. The FY 1990 Appropriations Act includes language prohibiting the Secretary of Commerce from promulgating or enforcing any new rule which was not in effect on December 22, 1987, I understand there was no rule in effect on December 22, 1987, providing for graduation of the university centers. Under what authority is EDA promulgating and carrying out a university center graduation program?

ANSWER:

EDA's University Center graduation policy was published in the Federal Register (Vol. 52, No. 28, p. 4370) on February 11, 1987. This policy, which limits the time a college or university may receive assistance under the Program, was discussed with appropriate Members of Congress (including Members of Appropriations Committees) at that time, and EDA subsequently provided information on the policy to individual members in response to their requests. It has also been discussed in Congressional hearings. In addition, the policy has been debated in some detail on numerous occasions with affected grantees. In mid-December of 1987, almost a year after the formal announcement, the Department of Commerce formally notified the Appropriations Committees of EDA's intent to proceed with its policy of phasing out EDA's financial support for university centers funded for seven years or more. The Agency believes this approach, which will enable EDA to help other colleges and universities become involved in economic development, is equitable and a more effective means of helping depressed areas.

Authorizing Legislation

QUESTION:

Instead of submitting unrealistic budget requests advocating the elimination of EDA, why doesn't the Administration submit an authorization request for EDA which would include proposed management improvements to provide for more efficient and effective administration of a program which has broad support in Congress and throughout the nation?

ANSWER:

The Administration does not believe that the Economic Development Administration is an appropriate vehicle to promote the goals of economic development, and no changes to its authorizing legislation would make it so. The Administration proposes termination of EDA for the following reasons:

- o It is our belief that sustained economic development is contingent upon the fiscal stability which will come only with a reduced deficit;
- o Problems of local economic stability are resolved more effectively when the responsibilities lie with those closest to the problem ... businesses, private citizens' organizations, and State and local governments.
- o The problem of the budget deficit is simply too great to consider continuation of programs for which there are reasonable alternatives; in the case of economic development, State and local capability provides that alternative;
- o Real jobs are created by the private sector and the federal government should not substitute for private capital or attempt to manipulate investment by competing with private financial markets;
- o Terminating EDA will save $1.2 billion in budget authority through FY 1995.

Economic Data

QUESTION:

Your budget request includes funding increases for several initiatives to expand data collection and improve economic analysis used by government decision-makers. This increase also includes funds to permit the Department to carry out the principal recommendations of the Economic Policy Counsel's work groups on improving economic statistics. What are those recommendations?

ANSWER:

The EPC's principal findings include:

- o the Nation's economic statistics are particularly weak in those rapidly changing areas of the economy where accurate information is most urgently needed. It follows that modernization of statistics and modernization of the economy go hand in hand.
- o inadequacies, which can lead to poor policy decisions, exist in many of our current economic statistics, including several series produced by BEA.

- it is costing the statistical agencies more and more just to maintain a constant quality in national economic statistics.

The suggested improvements include the following:

- Productivity, Output, and Prices
  - Service Sector: Explore alternative methods for estimating constant dollar output; accelerate and rearrange timetable for service sector improvements; expedite the compilation of input/output data; increase cooperation between the statistical establishment and academic researchers; and consider the efficacy of mandatory versus voluntary surveys.
  - International Trade: Accelerate improvements in estimates of trade in services; extend efforts to reconcile import and export data to Mexico, the European Community, South Korea and Japan; continue work to increase automation of export and import data collection; and increase the ease of access to trade data.
  - Construction: Complete ongoing methodological and data collection improvements and incorporate these in the 1990 GNP revisions.
  - Prices: Expand and seasonally adjust the employment cost index; and accelerate the BLS programs to expand and improve producer, consumer, and international price indexes to measure service prices more accurately.
- Investment, Saving, and National Wealth
  - The System of National Accounts (SNA): Revise the U.S. national income and product accounts to be consistent with the major components of the United Nations system of national accounts, which are used by most of the major industrialized nations of the world.
  - International Investment: Estimate direct investment using market values or replacement cost rather than historical cost and address problems with the measurement of international portfolio investment and other capital flows.
  - Domestic Investment and Saving: Accelerate work to improve measures of investment and saving and to the extent possible reconcile differences between the various measures of saving; improve the collection, coverage, and processing procedures for the financial flow data in the Federal Reserve Board flow of

funds accounts; and undertake the proposed annual investment survey at the Census Bureau.

- Inflation Adjustments: Add supplementary series to the national income and product accounts that separate the real and inflation components of the return to capital.

Currently this is done only with the corporate profits series.

- Employment, Income, and Poverty

  - Family Income and Poverty: Begin research on developing a new benchmark estimate of poverty appropriate to prices, consumption patterns and family composition in the 1990s; and continue publication of the experimental estimates of real family income and poverty.

  - Business Establishments: Continue work toward the goal of eliminating unnecessary duplication, but avoid the loss of unique and important alternative data; and explore ways for Census to share its establishment data with the BEA, for use in improving the national accounts.

  - The Survey on Income and Program Participation; Explore the possibility of carefully linking the data from the Survey on Income and Program Participation (SIPP) to administrative records, while taking great care to safeguard confidentiality.

  - Labor Force: Continue BLS and Census efforts to improve and modernize the current population survey and the current employment statistics program; and continue BLS efforts to reconcile and reduce discrepancies between the employment series arising from the household and the establishment surveys.

  - a range of measures to improve current economic statistics.

  - the adoption by the United States of the System of National Accounts (SNA) framework, including development of satellite accounts for research and development and pensions.

  - measures to improve the quality of the Government's international investment statistics.

Program Increases for MBDA

QUESTION:

You are proposing significant program increases for the Minority Business Development Agency. What led you to the conclusion that this agency needed to be strengthened?

ANSWER:

Reinvigorating the Minority Business Development Agency is an important goal of this Administration, shared by me and the President. We believe that full participation by minorities in American business is essential for the maintenance of our nation's competitiveness and economic security. Although Department of Commerce programs have assisted minority business for the past twenty years, much remains to be done. Studies continue to indicate that minorities are underrepresented as a percentage of business owners nationwide. To address this disparity, increases are requested in the MBDA budget to strengthen MBDA's ability to promote minority business ownership and to provide services to minority businesses through our network of Minority Business Development Centers (MBDC), as well as through Public and Private Sector programs in our Resource Development activity.

For example, one aspect of our Private Sector program request is to focus on capital development so that we can begin to address the problems minority entrepreneurs face in raising sufficient capital. Another example, from the Enterprise Development program, is the rural services demonstration project. This project is being designed to deliver management and technical assistance to minorities in areas of the country not presently served by the MBDC program.

Management Improvements

QUESTION:

I understand that GAO and the Department's Inspector General have issued a number of reports stating that management improvements are sorely needed at the Minority Business Development Agency. What action is the Department taking to implement these recommendations?

ANSWER:

The MBDA has some problems that reduce its effectiveness and efficiency. The problems documented in these reports are managerial and program related, and we have taken steps to eliminate them in both areas. Since his appointment as Director of the Minority Business

Development Agency (MBDA), Ken Bolton has made considerable progress in implementing them. Some of the actions taken for management improvements include the following:

- Conducted 6 regional conferences attended by MBDA regional staff and its minority business development center personnel to stress concerns about past mismanagement practices and penalties for further abuse.
- Inspected the capabilities of the regional offices to ensure compliance with internal controls and to guard against waste, fraud and abuse.
- Issued tighter internal instructions that govern the management of MBDA's national programs.
- Hired a new and competent staff to enforce and implement the provisions of OMB Circular A-123, "Internal Control Systems" in accordance with the Federal Managers Financial Integrity Act of 1982. New staff has inspected capabilities of the regional offices for compliance.
- Transferred an experienced Regional Director to Headquarters to eliminate a backlog in grant awards and facilitate the management process.
- Hired an experienced business consultant to evaluate critical program deficiencies and to coordinate preparation of the Agency's Redirection Plan.
- Conducting weekly staff meetings and bi-weekly regional conference calls in order to direct and monitor Agency operations.

QUESTION:

Why should Congress approve a substantial program increase for MBDA before the recommended management improvements are in place?

ANSWER:

In the past 10 months, MBDA has instituted many management improvements with more forthcoming. In the interim, we must keep in mind that while MBDA is improving programmatically and managerially, the fact is, that support to minority business must continue if America is to remain competitive. Minority businesses have needs that must continue to be addressed to enable them to move into the mainstream of the marketplace.

Our request for a fifteen percent budget increase will permit MBDA to continue to improve the quality of its service by expanding its two part emphasis by upgrading the quality of its service delivery network and at the same time increasing its national program resources.

With the Administration's commitment and the leadership of Ken Bolton, MBDA Director, to see the agency's reinvigoration, this is a task that will be achieved with the requested resources.

Global Change Research Program

QUESTION:

Your budget request includes a program increase of approximately $70 million for NOAA's share of the global change research program. What is the purpose of this multi-agency program?

ANSWER:

The goal of the U.S. Global Change Research Program is:

> TO ESTABLISH THE SCIENTIFIC BASIS FOR NATIONAL AND INTERNATIONAL POLICY MAKING RELATING TO NATURAL AND HUMAN-INDUCED CHANGES IN THE GLOBAL EARTH SYSTEM.

To achieve this goal, the participating agencies have established an integrated, Government-wide effort focused on three scientific objectives.

- To establish an integrated, comprehensive long-term program of documenting the Earth system on global scale;
- to conduct a program of focused studies to improve our understanding of the physical, geological, chemical, biological and social processes that influence Earth system processes and trends on global and regional scales; and
- to develop integrated, conceptual, and predictive Earth-system models.

NOAA's Climate and Global Change Program is a vital component of the U.S. Global Change Research Program (USGCRP) and enables the Agency to bring its unique talents and special capabilities to bear on some of the highest scientific priorities identified by the Committee on Earth Sciences in the USGCRP Research Plan released in the summer of 1989. In support of the stated objectives of the USGCRP and with a special focus on providing reliable assessments and quantitative predictions of climate change and its regional implications, NOAA will pursue the following global change responsibilities:

- DOCUMENTING GLOBAL CHANGE - NOAA's planned activities will fill significant gaps in: (i) enhancing operational ocean observations; (ii) implementing a global sea-level monitoring network; (iii) monitoring changes in significant stratospheric constituents like ozone (joint project with NASA); (iv) the development and testing of new measurement technologies; (v) the development of important climate and global change measurement products derived from operational satellite (METSATS) and insitu observations; (vi) climate diagnostics and analytical studies; and (vii) the establishment of an effective NOAA and national data and information management system in support of the USGCRP.

- FOCUSED PROCESS STUDIES - NOAA's research projects are aimed at some of the highest scientific priorities identified by CES and will complement those of the other participating agencies to provide significantly improved understanding of: (i) interannual climate variability through support of planned enhancements to the international Tropical Oceans-Global Atmosphere (TOGA) Program; (ii) the role of ocean circulation and dynamics in climate change, with particular emphasis on the importance of Atlantic Ocean circulation patterns on decadal climate change and the role of the ocean as a sink for atmospheric carbon dioxide; (iii) the sources, sinks, and behavior of greenhouse gases in the atmosphere through NOAA's Radiatively Important Trace Species (RITS) Program; (iv) the importance of dimethysulfide produced by marine organisms as cloud condensation nuclei; (v) clouds, water vapor, and the global hydrological cycle, including NOAA contributions to the evolving international Global Energy and Water Cycle Experiment (GEWEX); and (vi) the effect of climate and related stresses on marine ecosystems.

- CLIMATE MODELING AND PREDICTION - In response to NOAA's longstanding environmental prediction and information services mission, the FY 1991 proposal ensures significant progress toward: (i) operational ocean modeling; (ii) near-term forecasting improvements to extend operational predictive capability on monthly and seasonal timescales; and (iii) the design and implementation of an effective multi-agency approach to significantly advance climate prediction capabilities on interannual and decadal timescales.

QUESTION:

What difference does a one to two degree change in the average temperature make?

ANSWER:

Past climate can put such a change in perspective. During the Little Ice Age, a period of protracted global cooling, frost fairs were held on the frozen Thames River in England during winter, and settlements in Greenland were lost to advancing glaciers. Estimated global cooling during this period was only about 1.5 C. Since 1860, a global warming of only 0.5 C. has occurred. A long-term global warming of several degrees is not within recent human experience, but its potential consequences, such as sea level rise, water supply shifts or agricultural impacts, could be quite significant.

NOAA's Program will not affect climate change but rather will provide the information to make the best policy decisions on adapting or responding to climate change. It is crucial to know how big the warming will be, when it will occur, and where the regional effects will be most severe. This Program is one of NOAA's highest priorities because the effects of even a one-to-two-degree warming in the next century could be significant. The cost of developing and making available to national decisionmakers the best possible predictions is modest in comparison.

Coastal Ocean Science Program

QUESTION:

You're also requesting a program increase to continue the FY 1990 initiative in Coastal Ocean Science. What information do you hope to gain from this multi-year research program, and how much will it cost?

ANSWER:

The FY 1991 request of $17.4 million is only $11 million above the FY 1990 enacted amount. The need for this modest increase is clear. Over the next decade, federal and state governments will make decisions about the use of coastal and Great Lakes waters and their resources that will determine whether this economically and environmentally important area will continue to be a valuable national resource that provides important goods and services to the Nation.

For example, billions of dollars of both public and private funds will continue to be invested to enact legislation and develop and implement resource management plans; install and operate pollution control equipment and other measures; conduct waste disposal operations; modify the physical environment; monitor and respond to emergency events (such as hurricanes and coastal flooding) and assess and compensate for their damages.

The information currently available to make these decisions remains incomplete and often inadequate and inaccessible to appropriate levels of government and the private sector. As a result, most decisionmakers and scientists continue to address specific problems in selected coastal and Great Lakes areas on a piece-meal basis.

These investments in NOAA will improve the basis upon which the Nation makes its environmental decisions. NOAA's program increases will provide for comprehensive attacks on critical environmental problems and identify and protect coastal resources today and in the future. The programs supported by the increase have been reviewed and developed strategically to both confront today's problems and to invest in the future by putting in place programs and infrastructure to deal with tomorrow's challenges.

Modernize National Weather Service Equipment

QUESTION:

The NOAA budget includes increases for continuation of the program to modernize the National Weather Service's equipment (NEXRAD and related units). Will the Department maintain all existing public warning and forecast stations until the new stations are operational?

ANSWER:

The FY 1991 Budget includes funding to maintain existing public warning and forecast stations. When the new Weather Forecast Offices assume forecast and warning services with no deterioration of existing services, current Weather Service Offices will be consolidated.

LANDSAT Six Remote Sensing Program

QUESTION:

The NOAA budget also includes additional funds for the final part of the LANDSAT Six Remote Sensing Program. What are the recommendations of the Department to the National Space Council concerning the options for continuing LANDSAT-type data after LANDSAT Six?

ANSWER:

The Departments of Commerce and Defense have jointly developed a Landsat Implementation Options Study for the OMB and the National Space Council. This study outlines a series of technical and management/funding alternatives for defining a follow-on land remote sensing program after Landsat Six. The Department has not provided specific recommendations to the National Space Council concerning the alternatives.

Replacement Program for GOES Meteorological Satellite

QUESTION:

I understand that the replacement program for the GOES meteorological satellite will cost some $400 million more that the contractor's original estimate. What is the status of the replacement program, and what action has the Department taken in light of these horrific cost increases?

ANSWER:

The original GOES I-K contract value was $203 million. When GOES L and GOES M were added, the contract value was increased to $276 million. At that time, NASA estimated this contract would cost $403 million; this amount was included in the FY 1988 President's Budget. The cost for the GOES I-M contract included in the FY 1991 budget submission is $606 million.

NOAA, NASA and Ford Aerospace are currently working toward launch of the GOES I satellite in June 1991.

To constrain these costs to the greatest extent possible, actions taken by NOAA include:

1. Continue to keep the pressure on NASA and the GOES contractor during frequent senior management meetings, in which program status is reviewed and program direction defined.
2. Through a small resident staff at NASA Goddard, NOAA observes and has a technical input to most NASA technical contract-related activity.
3. For all purchase orders and task orders issued relative to the contract and supporting activities, NOAA reviews each action in advance.
4. NOAA participates as an observer in all design reviews and other program reviews relative to the contract held at NASA or at contractor facilities.
5. NOAA reviews NASA cost estimates prepared twice each year (NASA program operating plans) and provides budgetary guidance to NASA consistent with available NOAA funds.
6. NOAA participates in Senior Management Reviews held quarterly. These reviews began in 1987, when NOAA expressed strong concern about the status of the program and asked that NASA pay more, high-level attention to the GOES program.

7. NOAA directed NASA to restructure the GOES I-M contract to a fixed-price type contract at the earliest practical date.

8. NOAA developed procedures to work with NASA in making limited performance and performance testing compromises if necessary to reduce cost and improve the probability of obtaining the launch of GOES I at the earliest practical date.

Question Submitted by Congressman Carr

Advanced Manufacturing Centers

QUESTION:

Are there any funds in the NIST budget to establish 2 or 3 additional Advanced Manufacturing Centers? What is the prospect for the future of Advanced Manufacturing Centers?

ANSWER:

We visited the Advanced Manufacturing Center in South Carolina on March 5, 1990. We were very favorably impressed. Our current plan is to initiate one to two new centers in the next two years.

Questions Submitted by Congressman Early

Influence on EC 1992 Regulatory Activity

QUESTION:

What role is the Department playing in the formulation and implementation of regulations governing a unified European market (EC 1992)? Does the Department have a lead role?

ANSWER:

In recent months, the European Community Commission has become very open to a technical dialogue over the shape of U.S. and EC regulatory initiatives.

There is a shared perception that our stake in each other's markets is too large to allow disruption caused by incompatible or costly redundancies in regulations.

The Department is the lead agency to organize and advocate U.S. business response to these new EC regulatory initiatives that affect market access without explicit discrimination.

In May the EC agreed to open much of their standards, testing and certification deliberations to allow U.S. Department of Commerce-led dialogue in one of the most important market access issues coming out of the European Community.

Similarly, the Department has recently responded to EC requests for information on patents and copyrights and commercialization of technology.

The result of this increased dialogue is to identify areas that need special attention to avoid interruptions of trade while still maintaining the integrity of our respective regulatory structures.

The Department leads on all business-related market access sector-related issues in EC 1992 that are not actually subject to trade negotiations. Standards, intellectual property, labelling and packaging issues, investment rules and rules that bear on the behavior of business are examples of the areas in the EC 1992 program that the Department leads as the chief advocate for business.

USEC Brussels

QUESTION:

Does the Commerce Department have direct representation in the U.S. Mission to the European Community in

Brussels (USEC)? Is there a Commerce delegation, so to speak? If not, why not? Which department comprises the bulk of this mission?

ANSWER:

The Commerce Department began the process to establish a US&FCS presence at USEC over two years ago.

We have received approval to establish an office, and by summer plan to have it in full operation with two officers and three foreign service nationals.

Department of State officers comprise the bulk of the staff at USEC.

Eastern Europe Trade

QUESTION:

With respect to Eastern Europe, there is a great deal of discussion about economic changes taking place and trade opportunities for U.S. companies. Is Commerce the lead agency in this area?

It seems that U.S. aid that has been provided or is being discussed is geared toward investment by U.S. businesses. What effort or assistance is being provided to enhance export opportunities for the U.S. companies particularly where the export would be beneficial to the importing country, given the economic problems faced by some of these countries?

Are European and other countries, such as Japan, using aid to increase or enhance the likelihood of the purchase of their exports?

ANSWER:

Commerce is responsible for the private sector outreach segment of the Government-wide assistance program for Eastern Europe.

In January 1990, the Eastern Europe Business Information Center (EEBIC) was established at the Department of Commerce. The Center's staff provides oral and written information on business opportunities in Eastern Europe and U.S. government support programs to the roughly 200 calls received daily from U.S. businesses interested in trading and investing in the region.

The budget request for FY 1991 includes proposed increases for publications on Eastern Europe and additional staff (32 new positions in Eastern Europe). Our commercial offices in Warsaw, Budapest, and Bucharest are assisting a greatly increased number of companies and we are moving to increase their staffs.

We also will be opening commercial offices in Prague and Berlin this summer.

We are expanding our trade promotion efforts in the region. Our exhibitions at the major trade fair in each country are larger this year, with the U.S. Pavilion at the Budapest International Fair in May, for example, more than triple its previous size.

In addition, we are increasing the number of trade missions to the region. A highly successful telecommunications equipment trade mission was held in Poland in February, and others in electric power generation, food processing, coal and other areas are planned for 1990.

The Department is co-sponsoring with the U.S. Chamber of Commerce a major conference in April on "Doing Business in Eastern Europe and the USSR," which is designed to stimulate greater private sector interest in doing business in these countries.

Our country desk officers are working on an individual basis with many companies seeking to expand their business in Eastern Europe, and our District Offices serve as a local point of immediate assistance.

We are preparing a number of other programs which will be launched this spring and summer to assist U.S. companies penetrate the East European market.

US&FCS Budget

QUESTION:

Your budget request proposes an increase for the U.S. and Foreign Commercial Service. What are your plans in this area for FY 90 and FY 91? Do you envision a need for additional expansion in the future or changes in the current program and approach, given events in Europe?

ANSWER:

In 1990, we are establishing US&FCS offices at the U.S. Mission to the European Communities (USEC) in Brussels and at the U.S. Embassies in Prague and East Berlin. Yes, our 1991 budget request asks for 107 positions and $7.912 million to expand activities overseas. Of the 107 new positions requested for 1991, over half are requested for Europe. 32 are in Eastern Europe and 30 in Western Europe.

US&FCS Coverage

QUESTION:

In how many countries do we now have US&FCS

representation? How many countries are not covered by the US&FCS? Please provide a list of the latter for the record. Are any of these major markets? If so, why isn't there a US&FCS presence? How is trade and export promotion handled in those countries where there is no US&FCS presence?

ANSWER:

The U.S. government has a full, formal diplomatic presence in 146 countries. American commercial interests are represented by the US&FCS in 65 of the countries and by the Department of State in the remaining 81. However, we expect to establish a US&FCS presence in Czechoslovakia and East Germany this year and in Bulgaria next year.

We estimate that the State representation in 81 countries covers approximately 10% of the export market for U.S. business.

Those countries not currently served by the US&FCS are:

> Antigua and Barbuda, Bahamas, Bahrain, Bangladesh, Belize, Benin, Bermuda, Bolivia, Botswana, Brunei, Bulgaria, Burkina Faso, Burma, Burundi, Cape Verde, Central African Republic, Chad, Comoros, Congo, Cyprus, Czechoslovakia, Dijbouti, Equatorial Guinea, Ethiopia, Fiji, Gabon, Gambia, East Germany, Ghana, Grenada, Guinea, Guinea-Bissau, Guyana, Haiti, Holy See, Iceland, Jordan, Laos, Lebanon, Lesotho, Liberia, Luxembourg, Madagascar, Malawi, Mali, Malta, Marshall Islands, Mauritania, Mauritius, Micronesia, Mongolia, Mozambique, Nepal, Nicaragua, Niger, Oman, Palau, Papua New Guinea, Paraguay, Qatar, Rwanda, Senegal, Seychelles, Sierra Leone, Solomon Islands, Somalia, Sri Lanka, Sudan, Surinam, Swaziland, Syria, Tanzania, Togo, Tunisia, Uganda, Uruguay, Western Samoa, Yemen, Zaire, Zambia, and Zimbabwe.

The United States does not currently have a full, formal diplomatic presence in Afghanistan, Albania, Cuba, Kampuchea, Namibia, North Korea, and Vietnam. Unoffficial commercial and other relations with the people of Taiwan are maintained through a private instrumentality, the American Institute in Taiwan.

Commerce - State Cooperation

QUESTION:

To what extent is there coordination at the senior management level between Commerce and State?

ANSWER:

The close working relationship between Secretaries Mosbacher and Baker has set the tone for a better rapport between State and Commerce.

Under Secretary Farren's good relations with Under Secretary of State Selin have likewise led to considerable progress on such issues as State's provision of administrative support and security for US&FCS officers, designation of US&FCS senior commercial officers as Minister-Counselors, and other administrative matters.

US&FCS Director General Schwab and her staff in turn have developed good working relations with their State counterparts, with whom they hold regular meetings to discuss a variety of operational issues.

There has been improvement also in the relationship between US&FCS posts and those where State has responsibility for the commercial function. Under the "partnership post" arrangement, US&FCS officers provide informal counsel and assistance to their State colleagues, much to their mutual satisfaction.

Domestic Review

QUESTION:

The budget document indicates that a review of ITA domestic field operations is underway. What is the purpose of this review?

ANSWER:

The purpose of the review is to enable us to assign resources where they can be most effectively placed to reach the largest number of small and medium-sized firms with significant export potential.

Telecommunications Procurement

QUESTION:

The other week I noticed a brief article in the newspaper concerning a major telecommunications procurement by a European Government where the two remaining bidders in contention were a U.S. firm and a Japanese firm. According to this article, our embassy became aware of an attempt by the Japanese Government to intervene with this government on behalf of the Japanese bidder and informed Washington whereupon you and some other senior officials took steps to ensure that the process was done on the basis of merit so that the U.S. company had a fair shot. First, is this true and what can you tell us about this incident? Second, how common is this type of incident?

ANSWER:

We believe the procurement to which the Congressman refers involved the supply of the second switch in Indonesia. The newspaper account of the U.S. Government intervention in this case is essentially accurate. A number of Administration officials, including myself, contacted Indonesian officials urging them to make the decision on the basis of technical and commercial considerations. The Indonesian Government has decided to retender for this contract and the five companies that were semi-finalists in the original competition have been asked to submit new bids.

All too often U.S. companies competing for large contracts abroad are faced with foreign competitors that are being supported by political pressure from their home governments. In the telecommunications sector alone there have been examples of such situations in Brazil, Italy, Spain, Hong Kong, France, Korea, Argentina, Turkey, and China in the past few years. When we and companies agree that it would be helpful to have a show of support from the U.S. Government, we contact the appropriate government official in the procuring country.

Consulates in US&FCS Countries

QUESTION:

Is it true that in US&FCS countries there are 66 consulates where State Department officers take the lead in promoting exports? If so, why is this the case? I thought that the Foreign Commercial Service was supposed to have the lead role.

ANSWER:

Diminishing returns from resources is the principal reason why the US&FCS is not represented at all the consulates in US&FCS countries. Not all consulates have a sufficient caseload of export-related inquiries to justify a US&FCS presence. For example, the consulates in northern Mexico tend to answer import-related questions from U.S. businessmen.

The average cost of posting an American officer assisted by two foreign Service Nationals at any one post is $400,000 a year, or $26,400,000 for 66 posts.
We find that the State Department Consuls General are taking a closer interest in commercial work, and coordinating trade promotion activities with our commercial officers in that country. The US&FCS has also increased the travel budget of its commercial officers to permit more frequent visits to constituent posts.

Former Government Employees

QUESTION:

Recently, there have been several news and magazine articles about the issue of government officials involved in trade matters--policy development and negotiations--who leave government service and then advise and/or represent foreign clients or governments who are on the other side of the negotiating table from us. What do you think about this situation, Mr. Secretary?

Does this situation put the U.S. at a disadvantage in trade discussion/negotiations?

What is the Department's position on H.R. 1409?

ANSWER:

We are also troubled when we read about former senior officials who end up advising foreign governments. While everyone has a right to make a living--including ex-government officials--I am concerned about people involved in sensitive matters like negotiations going over to represent the other side.

There is now in place new legislation, which takes effect in January 1991, that places new post-government employment restrictions on senior officials, particularly those involved in international trade. These seem tough but fair, and I would like to see how they work.

The Administration has yet to take a position on H.R. 1409, which I understand would basically increase the duration of these restrictions.

Patent Pendency

QUESTION:

The U.S. average patent pendency is 18 months. I understand that for other countries, it is 5 to 7 years, sometimes longer. Does this disadvantage U.S. firms that file for patents in other countries? What effect, if any, does this have on U.S. competitiveness? Do countries use this to impede U.S. exports? If this is a problem, what are we doing to address this situation?

ANSWER:

The USPTO is the only major patent office in the world which issues patents in an average of 18 months. The 18 months' pendency program provides substantial benefits to industry. Industry wants a patentability determination prior to publication of their technology to allow them to retain as trade secrets subject matter found not to be patentable. The major reason for 18 month publication is to ensure early disclosure of technology which is one of the basic premises of any patent system. When other countries publish without a concurrent patentability determination both U.S. and foreign firms are disadvantaged. Other countries have struggled to provide search results or patentability determinations by 18 months but have had mixed results. When a patent is issued in 18 months by the USPTO, exclusive rights are granted and technical disclosures are published in our own language.

Most foreign countries publish the contents of a patent application filed in that country 18 months after the application is first filed anywhere in the world. This publication gives interested parties in that foreign country the benefit of knowledge of that invention in their own language, while the inventor is usually assured of some rights during the period from publication to patent grant, if a patent is ultimately granted. The rights granted after publication, but before patent grant, are typically weaker than those associated with the grant of a patent, particularly because they do not include the right to exclude others. The knowledge gained from early publication places competitors in a favorable position in planning research and marketing efforts, while the long pendency and uncertainty of patent grant and scope of patent protection add additional uncertainty and risk for the investor in making investment decisions. These delays and uncertainties are particularly difficult for small businesses to absorb.

In many foreign countries, patent term cannot exceed a given number of years measured from the date of filing of an application. Clearly, any significant delay in granting patent rights reduces the effective term of protection.

While most delays in granting patent protection tend to have a negative impact on firms seeking protection, some delays in some industries can have the salutary effect of postponing the costs of prosecution until a decision is made to develop a product for market. For example, in regulated industries such as pharmaceuticals and agricultural chemicals, where significant expenditures and delays in obtaining marketing approval are typically encountered, delay in examination of a patent application and associated costs can provide additional time to make investment and marketing decisions that may result in not seeking patent protection and the associated cost avoidance.

On the whole, U.S. industry is best served by a patent system which provides timely patentability decisions. The strength of U.S. intellectual property rights and

U.S. competitiveness are interrelated and consequently both benefit from prompt issuance of valid patents. Maintaining our 18 months' pendency program is in the overall best interest of the U.S. It is a standard which other countries should adopt.

Changes in Eastern Europe

QUESTION:

Given the remarkable changes taking place in Eastern Europe, discussions are now under way relative to the relaxation of COCOM Export Controls. Would you summarize the U.S. position on this issue and bring us up to date on the status of these discussions?

ANSWER:

From the outcome of the special COCOM meeting held in February to consider developments in Eastern Europe and to formulate a multilateral response, it was clear that COCOM continues to play an essential role in ensuring Western security. However, it was also recognized that the multilateral system of strategic trade controls must adapt to the changing political and economic climate in Eastern Europe.

The U.S. Government is in favor of liberalizing export controls toward Eastern Europe in a measured approach. The USG position involves procedural reforms as well as an intensified program for streamlining the COCOM control list to reflect truly sensitive strategic commodities.

Essentially, this would mean a shorter control list, resulting in a reduction of the burden on national licensing and enforcement systems for items of questionable strategic significance or items that are widely available from non-COCOM sources. A national strategic review is currently being done by the Joint Chiefs of Staff (JCS) at the Defense Department. The results of this review could have a major impact on our ability to negotiate within COCOM.

In an important procedural step, COCOM members have agreed to reduce case processing time by one-third, from twelve weeks to eight weeks.

Within the context of COCOM, there is also a need to seek and obtain commitments from the new East European governments that Western technology will be protected against diversions. Therefore, as an integral element, long term liberalization will depend upon the level of safeguards that the Eastern European countries adopt.

We expect productive results in the next few months from the efforts underway within the U.S. government and abroad to develop an appropriate and meaningful response to the countries in Eastern Europe that have embarked upon democratic reforms and that also agree to safeguard Western technology.

QUESTION:

Would you outline the Commerce Department's role in these discussions? What are the roles of the State Department and the Department of Defense?

ANSWER:

The Department of Commerce plays a key role in the COCOM discussions consistent with our statutory authority under Section 5(c)(3) of the Export Administration Act, as amended. This provision requires the Secretary of Commerce to conduct reviews of the Control List, to make revisions to the list and to use the data developed in formulating the United States proposals to COCOM. Section 5 (c)(3) clearly designates the Department of Commerce with the primary responsibilities for guiding this process.

The Department of Commerce is heavily involved in conducting the technical analysis necessary for initiating U.S. recommendations to COCOM, including those for liberalizing trade with East Bloc. This is an interagency process in which we consult with the Department of Defense and State to reach a final U.S. position. However, because the U.S. imposes national security controls cooperatively with our COCOM partners, positions must be negotiated in COCOM to obtain consensus for changes to the list.

While Commerce participation remains active throughout the process, the Department of State leads the U.S. COCOM delegation and has responsibility for negotiating the U.S. positions in COCOM. The Department of Defense provides technical and procedural input, with an emphasis on strategic concerns consistent with their agency advisory role. The secretary has requested State to approve the addition of a DOC technical specialist to the permanent COCOM delegation in Paris, as provided for by the Committee in the FY 1990 Appropriation.

QUESTION:

Briefly, summarize what impact a relaxation of export controls and change in COCOM policy would have on the activities of the Department and its agencies.

ANSWER:

Changing COCOM policy and relaxing export controls will affect Commerce in several different ways. On the one hand, the Department is moving forward to adopt a general licensing approach for the majority of COCOM controlled items exported to our COCOM partners. This will definitely reduce the burden of processing large numbers of individual export licenses to those countries.

On the other hand, to date licensed exports to COCOM proscribed destinations have been limited, primarily by the strict COCOM rules. Relaxing of these rules should open great opportunities for trade with all COCOM proscribed destinations, especially to Eastern Europe. While liberalization will reduce the overall number of applications that heretofore required little analytical or interagency review, it will increase the number of complex license applications received requiring significant technical evaluation and involvement of policy officials. The net effect of these changes remains to be determined.

In addition, Commerce has already offered technical support and assistance to a number of the new governments in Easter Europe regarding their adoption and implementation of a safeguard program to protect Western technology. In order to facilitate and assist in the transition process, Commerce is prepared to make available appropriate personnel in our Embassies to assist in strategic trade matters directly related to Eastern Europe.

Representative to COCOM

QUESTION:

I believe the FY 1990 Bill included funds for a Commerce Department representative to COCOM. What is the status of this? If a Commerce representative to COCOM is not in place, please explain what the delay is.

ANSWER:

Senate Report Number 101-144 directed that $150,000 be made available for a representative of the Department of Commerce to the Coordinating Committee (COCOM). Since that time DOC has supplied the State Department with information on the necessity of having a DOC representative at COCOM. Formal notification was received from the State Department disapproving the establishment of this position. BXA is in the process of determining what additional steps can be taken to implement the stated wishes of the Senate.

MOU with South Korea

QUESTION:

What is the status of the proposed MOU with South Korea on the F/A-18?

ANSWER:

A draft MOU was presented to the South Korean Government in February 1990. The South Korean Government is in the process of reviewing the MOU. Comments and formal negotiations are expected to begin in early May.

The Department of Commerce will take an active part in these negotiations.

BXA Field Offices

QUESTIONS:

The FY 1990 Appropriations Bill and accompanying report provided funds and guidance for the opening of three BXA offices. Has the conference directive been carried out?

ANSWER:

Yes. The Department plans to open offices in Nashua, New Hampshire, Portland, Oregon, and Santa Clara, California. The office in New Hampshire will be staffed with six BXA specialists and will serve the Boston/Nashua area as well as the New England region. The Portland location will have two specialists co-located with the International Trade Administration (ITA), and Northern California will have two BXA specialists.

The New Hampshire office is expected to open in September 1990, the Santa Clara office will open in May 1990, and Portland by July 1990.

Consolidation of NMFS Field Operations

QUESTION:

The NOAA budget proposes approximately $4 million dollars in savings as a result of the consolidation of NMFS field operations. Why are you proposing this consolidation?

ANSWER:

The proposed consolidation provides an opportunity to increase the efficiency and effectiveness of NMFS laboratory activities through a review of the agency's field research structure. By conducting a comprehensive survey of laboratory facilities, research orientation and personnel costs, the Department will be better able to determine ways to conduct ongoing programs more efficiently as well as enhance laboratory support for NMFS programs.

QUESTION:

I understand that a study of NMFS field operations is underway. If this is the case, why are you proposing to consolidate operations before the results of this study or review are known? How do you know that there will be any savings? Isn't this putting the cart before the horse?

ANSWER:

Based on the study of the Northeast Region's laboratory facilities conducted by the Department of Commerce, it is clear that significant savings can be achieved and NMFS laboratory efficiency improved through consolidation. The ongoing study is not intended to verify that the savings exist, but to determine the specifics on how the consolidation will be implemented.

Funding for Major Maintenance Projects at NOAA

QUESTION:

I was pleased to see that the budget request for NOAA includes funds to initiate major maintenance projects at NOAA facilities, albeit a modest amount. In general, how would you characterize the condition of NOAA facilities? Is this part of a multi-year plant upgrade of NOAA facilities?

ANSWER:

It is very difficult to make a generalization regarding the condition of NOAA's physical plant, largely because of the varying ways in which these facilities came into NOAA's inventory. NOAA was formed in 1970 by an executive reorganization that drew organizational units out of the Departments of Commerce, Interior and Defense and the National Science Foundation. Each of these units was housed in facilities that reflected the building needs and priorities of their earlier parent organizations. Thus, NOAA's facilities in 1970 were of widely varying age, physical condition and features. With a few notable exceptions like the construction of several new buildings as part of the consolidation in Seattle at Sand Point, relatively little has changed since then.

The attached bar chart provides a quick overview of NOAA's building inventory. It identifies the number of NOAA-owned buildings by the year in which they were constructed. From this chart one can conclude that:

- there are a large number of buildings that are between 20 and 35 years old, an age where major building components (e.g. heating ventilating and air conditioning, electrical, roofing) have reached or exceeded their useful lives and require placement;

- there are a number of buildings that are between 35 and 55 years old that clearly will require close attention in maintenance and repair--some are even older (three of NOAA's buildings are over 100 years old);
- there has been very little building since 1975; and
- due to very little new construction, the average age of the inventory in 1990 is 28 years.

In addition, it must be noted that some of NOAA's operations are housed in buildings that were constructed for entirely different purposes and are thus ill-suited to meet current and anticipated agency requirements.

The intent of this initiative is to provide an adequate base of annual funding to assure that NOAA's program activities and employees are, and will continue to be housed in, facilities that are free from imminent safety hazards, meet environmental mandates, and materially assist in carrying out the agency's missions. In achieving this objective, NOAA will survey, over a period of years, its entire owned inventory of buildings to determine required repairs, replacements, alterations and renovations.

QUESTION:

I also see that you are requesting funds to initiate a modernization and upgrade program for the NOAA fleet and to reactivate one vessel. This is a significant departure from past policy. Tell us why you feel this program is necessary and would you give us a brief summary of what this program will entail?

ANSWER:

The NOAA fleet has an average age of 26 years and is facing block obsolescence. None of the ships has received significant rehabilitation to extend their service lives or provide modern instrumentation support for scientific research. A service life extension program must be started if the fleet is to remain operational in the future. The program will include overhaul or replacement of major ship systems, modernization of laboratory spaces and hull refurbishment or reconditioning.

Questions Submitted by Congressman Regula

Uruguay Round Antidumping Negotiations

QUESTION:

Circumvention of outstanding antidumping orders is a major problem in the implementation of the Code and U.S. law. In the context of the GATT Uruguay Round negotiations, what progress has the U.S. made concerning its efforts to maintain and strengthen international dumping rules? Can you respond in general, and more specifically in writing, to your efforts regarding the following ECAT proposals: adjustments for indirect expenses, averaging prices in the determination of U.S. price and foreign market value, de minimis duty level, determination of injury, public interest determination, and sunset provision?

ANSWER:

Last November, the U.S. tabled an ambitious proposal to address not only circumvention, but also input dumping, repeat dumping and other practices which diminish the effectiveness of an existing antidumping order.

We have actively lobbied for our proposal in both the formal negotiating group and in numerous bilateral consultations with other interested delegations.

Progress has been difficult, but most of our trading partners now acknowledge that circumvention is a real problem which deserves to be addressed. They have not been as receptive, however, to our arguments on the other practices which we would like to see deterred.

Despite this, we have emphasized that all of our issues need to be dealt with in order for there to be any agreement that is satisfactory to the United States.

On adjustments for indirect expenses, we have expressed concern that adjusting for every conceivable expense could result in the masking of dumping margins.

On averaging of prices, we have suggested that such a practice could obscure dumping which may be occurring in selected product lines, in selected regions, or at selected times within the period investigated.

On de minimis duty level, we have pointed out that we already maintain a de minimis rule of 0.5% or less, and that a number much larger could permit injurious dumping to continue in certain price sensitive markets.

On determination of injury, which encompasses many issues, we have defended the logic of cumulation and of not basing injury findings on the presence of any one factor.

We have said that public interest determinations would dangerously politicize U.S. antidumping practice.

We have also insisted that an automatic sunset clause has no logic unless there can be an assurance that the dumping will not continue or the injury will not resume.

Actions Taken to Aid U.S. Companies in Eastern Europe

QUESTION:

Mr. Secretary, as you know, some American business has seen the events in Eastern Europe as an opportunity for new markets. As a key formulator of our nation's trade policy, you have demonstrated exceptional leadership and foresight concerning this matter. Can you describe the specific actions you have taken to aid domestic companies in this pursuit, such as your trip to Poland last November with a U.S. business delegation?

ANSWER:

Our September 1989 Mission to Hungary and Poland focused on developing the commercial framework and climate in which American companies could do business more successfully. A representative group of American business representatives accompanied us in both countries, bringing a practical business orientation to our discussions. The heads of the Overseas Private Investment Corporation and the U.S. Trade and Development Program participated likewise, introducing both American business and our East European hosts to the assistance available from their programs.

During these missions:

-- We agreed with both Poland and Hungary to initiate negotiations of Business and Economic agreements which will give greater confidence to traders and investors;

-- We signed Tourism Agreements with both Poland and Hungary designed to encourage expansion of tourism-related trade and investment, and signed a Private Business Agreement with Poland through which both governments will assist cooperation between our private sectors.

-- We undertook to send legal and accounting seminars to Poland and Hungary, as well as seminars to provide information about the U.S. Generalized System of Preferences (GSP) and programs under the SEED Act.

-- We inaugurated the International Executive Service Corps programs in Poland, and stimulated the creation of an American Chamber of Commerce in Hungary.

During the November Presidential Economic Mission to Poland, leading American business executives took a first-hand look at the needs of the Polish economy and gave their recommendations on what the Polish and U.S. governments, and the private sectors could do to speed Poland's recovery and transition to a market economy. Their recommendations serve as the basis for our ongoing efforts, particularly in such vital sectors as telecommunications and energy.

Our February 1990 mission to Czechoslovakia was a first step in revitalizing trade relations with that country. Together with the business representatives who accompanied us, we exchanged views with the new Czechoslovakian leadership about the conditions needed for expansion of business. We promised to bring a larger executive mission, which I will lead, to Czechoslovakia, when the bilateral Trade Agreement is concluded.

Steel VRA's - Inclusion of 60" Stainless Steel Sheet

QUESTION:

Mr. Secretary, under the recently negotiated extension of the steel VRAs, U.S. negotiators were unable to get 60"-wide stainless steel sheet included in the agreement with the EC and only on the "shift watch list" for certain other importers. Because of artificial market conditions (i.e., bankruptcy of the sole U.S. producer) when the initial VRA level was established, our current domestic producers are now forced into production levels far below capacity to allow subsidized foreign steel sheet into this country. Last year, this labor intensive product category saw a 9% drop in prices by foreign producers with an increase from 5.8% of total imports to 7.8% in less than 30 days. What action can we expect from your office to protect against these types of abuses specifically in the 60" example and other similar product lines?

ANSWER:

In our administration of the steel VRAs, the Department of Commerce constantly monitors steel imports for potential shifts into sensitive products. Each VRA contains a provision allowing us to take action whenever such shifting occurs.

The United States Government is aware of the unique circumstances concerning imports of 60"-wide stainless steel sheet, and we appreciate your concern in this matter. The new steel VRAs do include all major foreign sources of this product (the European Community, Japan and Finland).

The U.S. Government has informed all of these parties of its concern in this area, and this product has been specified by name in the U.S.-EC VRA as a product which will be closely monitored against any sudden increase imports.

In our careful examination of trade in these products, we have seen some positive recent trends:

-- In 1988, estimated imports of 60"-wide stainless sheet totaled 20,000 tons.

-- In 1989, imports of this product totaled 13,272 tons, a decrease of approximately 33 percent from 1988.

-- Prices of imports of this product increased 4 percent in the second half of 1989, at a time when other stainless steel prices were declining by 10 percent.

I can assure you that the Department of Commerce will continue to closely monitor imports of this product under the new VRAs. In fact, this issue is on the agenda for the upcoming U.S.-Japan and U.S.-EC steel consultations scheduled for April 1990.

Questions Submitted by Congressman Kolbe

Cotton Ginning

Every three years the Bureau of the Census is required to obtain approval from the OMB for the collection of cotton ginning statistics. I understand that the Bureau of the Census sent a supporting statement to OMB in November, 1989.

The ginning statistics provide valuable information on the size, location and output of the ginning sector. Through these statistics, U.S. producers are given an advantage in the world market by being able to reconcile the final USDA, National Agriculture Statistics Service cotton production estimate with actual production as indicated by ginning reports. This report is also used to indicate how quickly the crop is being harvested in comparison with previous years. In addition to providing an estimate of lint and seed production, the report gives an estimate on the number of gins operating during a specific time period. Finally, the report estimates the number of bales processed per gin, and shows shifts in production from one area to another. This is particularly useful, since may states no longer publish county production estimates.

QUESTION:

When the Department of Commerce submitted the Bureau of the Census budget requests to OMB, did you support continuation of funding for the cotton ginnings report, and if so, does the Bureau remain in support of this report?

ANSWER:

Yes. The budget request to OMB supported continuation of the cotton ginnings report. Subsequent to the OMB submission, the Census Bureau sustained additional budget cuts because of the Gramm-Rudman-Hollings legislation. At that time, the cotton ginnings report was eliminated in FY 1991 in order to fund higher priority economic data collection programs.

QUESTION:

Because many of the statistics included in the cotton ginnings report are not collected by any other source, valuable information about U.S. cotton supplies will be lost. Is it the Department's position that this information is no longer valuable?

ANSWER:

No, but compared with the overall Census data collection program, this is one of the lower priority programs. We viewed the elimination of this program as preferable to taking an across the board reduction.

QJESTION:

As you know, about one-half of the cotton produced domestically is exported annually. Without the information collected by the Bureau of the Census, the U.S. could be put in a situation of being an unreliable world supplier of cotton because of inadequate information on stocks. Does the Department propose an alternative which would provide a reliable source of information to our domestic users of cotton, as well as to the U.S. exporter?

ANSWER:

No.

WEDNESDAY, FEBRUARY 28, 1990.

MARK E. BROWN, DIRECTOR, OFFICE OF BUDGET

Mr. EARLY. The Committee will come to order.

The first item that we will consider this morning is the request for the Patent and Trademark Office. The request is for $112,027,000 in new budget authority. This amount is an increase of $26,127,000 above the appropriation enacted for the Patent and Trademark Office for fiscal year 1990.

We will insert the budget justification submitted in support of this request into the record at this point.

PTO-1

GENERAL STATEMENT

The Patent and Trademark Office administers the laws relating to patents and trademarks in order to promote industrial and technological progress in the United States and strengthen the National Economy. This mission is accomplished by: examining patent and trademark applications, issuing patents and registering trademarks; disseminating patent and trademark information to the public; and encouraging a domestic and international climate in which intellectual property can flourish. The Office seeks to preserve the integrity of the U.S. patent system which promotes industrial and scientific progress and the Federal trademark system which promotes investment in business and protects consumers, thus strengthening the national economy. Patent laws, which provide for granting inventors the right to exclude all others from making, using, or selling their inventions for 17 years, encourage technological and scientific advancement by providing incentives to create, invest in, and disclose new and useful products and processes. PTO's primary role in administering these laws is to examine patent applications and grant protection for patentable inventions. In addition, PTO is responsible for collecting, assembling, cataloging, publishing, and distributing technical information disclosed in patent grants and, by so doing, has created the world's largest scientific and technical information center. Trademark laws provide for Federal registration and protection of names, symbols, or devices used by businesses to identify and distinguish goods and services offered to the public. Trademarks provide economic benefits by identifying the uniqueness, and integrity of the seller thereby reducing confusion of products and unfair competition. PTO examines trademark applications and grants Federal registration to owners of qualified marks.

Following is a comparison of the 1990 appropriation and the 1991 budget estimate and related data on current employment for the programs of the Patent and Trademark Office:

(Dollar amounts in thousands)

	1990 Appropriation Currently Available		1991 Estimate		Increase/(Decrease)	
	Perm. Pos.	Amount	Perm. Pos.	Amount	Perm. Pos.	Amount
Salaries and expenses	3,898	$275,877	4,765	$353,647	867	$77,770
Less budgeted offsetting fee collections	...	(189,977)	...	(241,620)	...	(51,643)
Appropriation requested	3,898	$85,900	4,765	$112,027	867	$26,127
	(3,694)		(4,441)		(747)	
1990 FTE Revision	(150)					
1990 Revised FTE Totals	(3,844)					

Note, permanent position numbers in parentheses represent workyears(FTE). In 1991, user fees offset 68 percent of the costs of the PTO programs, with the remaining costs (32 percent) being supported by appropriated funds.

Highlights of the 1991 budget submission to the Congress follow:

1. Maintain patent pendency at 18 months and continue to improve patent quality.

In 1982, the Administration established the goal of reducing patent pendency to 18 months by 1987 while improving patent quality. Continued increases in the number of patent applications and a funding reduction in FY 1986 in response to the Emergency Deficit Control Act forced revision of the goal to 18 months pendency by 1989. The goal focuses on the average pendency for all patent applications. The goal was reached in fiscal year 1989 and the main purpose of the 1991 initiatives is to maintain patent pendency at 18 months while improving patent quality.

1991 Initiatives

Based on experience to date, the number of patent applications filed will grow to 162,000 and 177,000 receipts in FY 1990 and FY 1991, respectively. The FY 1991 request is based on this increased workload. In contrast, the FY 1990 submission assumed 140,000 receipts. The FY 1991 submission, therefore, requests sufficient resources to process the anticipated increase in the number of patent applications in all stages of the patent examination process -- pre-examination processing for national and international (PCT) applications, processing of international applications under Chapter I and II of the PCT, examination of national application by professional staff with supporting clerical staff, and patent printing. Pre-examination functions will continue second shift operations initiated in FY 1988.

Initiatives supportive of patent quality are proposed for 1991. Initiatives supportive of patent quality include an expansion of the Patent Quality Review Program, enhanced examiner training, and improvements to the integrity of the search file through expanded classification activities. The 1991 initiatives to maintain patent pendency at 18 months and to improve quality will be fully fee funded.

2. Automate the patent and trademark processes by the 1990's.

In response to Public Law 96-517, an Automation Master Plan was forwarded to Congress in December 1982. It described planned efforts to improve patent and trademark operations with computer technology. As a result of substantial progress towards some goals and the need to revise others, second and third editions of the Master Plan were prepared and submitted to Congress in February 1986 and April 1987.

1991 Initiatives

The PTO's implementation of the Automated Patent System (APS) was reviewed by an Industry Review Panel (IRP) which recommended management and technical revisions to the APS. As a result of the IRP recommendations, a revised APS development and deployment plan was prepared. Funds are proposed here to support the deliberate deployment process reflected in that plan. Several initiatives are proposed in 1991 which complement the APS plan and respond to recommendations of the IRP. Most notable is the initiative to establish a permanent funding base for the APS contracts management staff.

Trademark automation has long been operational through the T-Search and TRAM systems. Initiatives for T-Search allow for the replacement of aging terminals in the trademark examining area and an expansion of T-Search services for use by the public and by a growing cadre of trademark attorney advisors. A permanent funding base is also sought for the provision of T-Search services to the public. The initiatives are totally supported by user fees.

Management and administrative systems are proposed for expansion to permit the upgrade and redesign of our basic PALM and TRAM administrative systems to provide for a uniform administrative system throughout the PTO, and to expand our data tape sales program.

3. Strengthen worldwide protection of intellectual property.

Effective intellectual property protection is an increasingly important factor for U.S. businesses competing in the world market. Effective protection for trademarks is necessary to build and protect reputations for quality goods and services; effective copyright protection is necessary to prevent piracy of U.S. origin books, films, recordings, and software; and effective patent protection is necessary to recover the costs of research and development of new products and processes. The PTO continues efforts to increase the effectiveness of intellectual property protection in the U.S. and abroad. Multilaterally, the PTO is assisting the U.S. Trade Representative (USTR) in advocating the establishment of standards for protection and enforcement mechanisms within the framework of the General Agreement on Tariffs and Trade (GATT) and assisting the Department of State in efforts to harmonize patent and trademark laws being conducted by the World Intellectual Property Organization (WIPO). Bilaterally, the PTO is assisting USTR in "special 301" process and trade consultations with other countries such as Japan and the Soviet Union. In addition, the PTO provides training on intellectual property laws and administration to nationals of developing countries. Domestically, the PTO advocates enactment of improvements to U.S. intellectual property laws.

1991 Initiatives

No new initiatives are requested for this program.

4. Maintain trademark pendency.

In 1985 [illegible] TO achieved a Departmental goal of reducing trademark pendency to three months to first action and 13 months to disposal. This goal was sustained in 1986, 1987, 1988 and 1989. The goal in 1990 and beyond, in view of the effect that the Trademark Law Revision Act of 1988 will have on pendency for filings under the intent-to-use provisions of the Act, is to maintain the reduced first action pendency period at three months and the reduced disposal pendency for all filings under use provisions of the Act at thirteen months, with timely disposal of all intent-to-use filings. All trademark programs and new initiatives are fully supported by user fees.

1991 Initiatives

The implementation of the new Intent-to-Use legislation in November 1989 is expected to yield a 25 percent increase in workload. Trademark applications are estimated to be 100,500 in 1990 and 106,500 in 1991. The 1990 budget assumed receipts of 80,400. To address this considerable increase in workloads and to maintain reduced pendency periods, 1991 initiatives are proposed for the pre-examination, examination, and post-examination functions. The Trademark attorney staff will be expanded by the creation of three new Law Offices comprised of 48 trademark attorneys and 41 support staff. Pre- and post-examination functions must similarly be increased in order to maintain a balance in all production areas. The expected increase in examining attorney production will result in an increase in the number of cases appealed to the Trademark Trial and Appeal Board. Additional resources are accordingly requested for the TTAB.

5. Maintaining a balance between program and support functions.

Although not a goal or objective, this categorization of requirements addresses the need to maintain an essential level of support services for the above four direct program goals. The initiatives which follow are necessary complements to our direct programs and ensure the success of the direct programs.

1991 Initiatives

Space for employees and workstations remains a huge problem. The 1991 request will include an initiative to fund a substantial increase in space to accommodate existing and projected staff and workstations. Procurement and personnel services must also be expanded due to increased workload. The personnel initiative is supported by the previously established personnel employee/office employee ratio of 1:60.

6. Increase in user fee collections.

Increases in patent fees were implemented for the 1989-1991 fee cycle to reflect changes in the Consumer Price Index from the previous three-year period. The budget assumed an increase of 10.3 percent for patent fees. Increased fee collections reflect the growth in patent and trademark applications and the greater cost of providing services and materials to PTO customers.

The proposed 1991 changes to the 1990 appropriation by budget activity are:

(dollar amounts in thousands)

Activity	Description	Permanent Positions	Amount	Page No.

Justification of Adjustments to Base and Built-in Changes
(Dollar amounts in thousands)

	Perm. Pos.	Amount
1990 Fee Collections:		
Fee collections proposed in 1990 budget request	0	$180,032
Sequester applied in 1990	0	(2,520)
1989 Surplus fee collections	0	12,265
Federal reimbursements	0	200
Subtotal	0	189,977
Adjustment for 1990 pay increase and related costs:		
Total cost in 1990 of pay increase	0	4,157
Less amount absorbed	0	(4,157)
Anticipated 1990 pay increase supplemental	0	0
Amount in 1991 to provide full-year cost of pay increase	0	5,543
Less amount absorbed	0	(387)
Subtotal, adjustment for 1990 pay increase	0	5,156

Effective January 1, 1990, Federal employees received a 3.6 percent pay increase. In 1990, PTO is absorbing the full cost of this pay increase.

	Perm. Pos.	Amount
Other Increase		
Adjustment for 1991 pay increase and related costs	0	2,980
Full-year cost in 1991 of positions financed for part year in 1990	0	294
One additional compensable day	0	600
Federal Employees' Retirement System	0	910
Thrift Savings Plan	0	138
Federal Insurance Contribution Act (OASDI)	0	476
Medicare	0	36
Health insurance premium	0	1,102
Employees' Compensation Fund	0	277
Rent payments to GSA	0	998
Printing and reproduction	0	1,368
Subtotal, other increases	0	9,179

	Perm. Pos.	Amount
Adjustment for 1991 pay increases and related costs:		
Total cost in 1991 of general pay increase	0	4,670
Less amount absorbed	0	-(2,335)
Subtotal, adjustment for 1991 general pay increase	0	2,335
Total cost in 1991 of SES pay increase	0	1,290
Less amount absorbed	0	(645)
Subtotal, adjustment for 1991 SES increase	0	645
Total adjustment for 1991 pay increases	0	2,980

The President's Budget includes an estimated general pay raise of 3.5% effective January 1, 1991. One-half of the 1991 costs of the increase will be absorbed. The estimate also includes an average SES increase of 22%, with 50% of the cost absorbed.

Full-year cost in 1991 of positions financed for part year in 1990:

An additional $294,000 is required in 1991, to cover the full-year cost of positions financed for part year in 1990. The lapsed funds are for twenty six staff years. This provides full-year financing with a five percent lapse.

	Perm. Pos.	Amount
Annual salary of new positions in 1990	131	$5,768,281
Less 5 percent lapse	(-7)	(288,414)
Full year cost of personnel compensation	124	5,479,867
Personnel benefits at 26 percent	0	1,424,242
Full-year cost of personnel compensation and benefits	124	6,904.109
Compensation and benefits included in 1990 appropriation	(98)	(6.610.000)
1991 adjustment to base	26	294,109

More/Less compensable days

The $600,000 for an additional day in fiscal year 1991 was calculated by dividing the fiscal year 1990 estimate for personnel compensation and benefits by the 260 compensable days in 1990 and multiplying by one.

Federal Employees' Retirement System

The number of employees covered by the Federal Employees' Retirement System (FERS) will continue to rise as employees covered by the Civil Service Retirement System (CSRS) leave and are replaced by employees covered by FERS. We estimate that the percentage of payroll of eligible employees covered by FERS will rise from 35.1 percent in 1990 to 40.4 percent in 1991. In addition, the agency's contribution for basic benefits will rise from 12.97% to 13.00%. The computation of FERS basic contributions is:

Pay subject to retirement systems ($130,081,000)	
Basic benefits cost in 1991 (130,081,000 x .404 x .13)	$6,831,854
Basic benefits cost in 1990 (130,081,000 x .351 x .1297)	-5,921,899
Increase in basic contributions	909,955

Thrift Plan

The cost of agency contributions to the Thrift Savings Plan will also rise as FERS participation increases. We estimate the percentage of payroll coverage to rise from 35.1% in 1990 to 40.4% in 1991. We estimate the agency's contribution will remain at 2%. The increased cost for contributions to the Thrift Savings Plan is:

Payroll subject to retirement system ($130,081,000)	
Thrift Plan benefits cost in 1991 ($130,081,000 x .404 x .02)	$1,051,054
Thrift Plan benefits cost in 1990 ($130,081,000 x .351 x .02)	-913,169
Increase in Thrift Saving plan	137,885

Federal Insurance Contribution Act (OASDI)

Employees covered by FERS are covered by Old Age, Survivor, and Disability Insurance (OASDI). The percentage of payroll covered by FERS is estimated to rise from 93.4% in 1990 to 95.3% in 1991. In addition, the OASDI tax rate will increase from 6.17% in FY 1990 to 6.20% in 1991. As a result OASDI contributions will increase.

OASDI:

FERS payroll subject to FICA Tax in 1990 ($130,081,000 x .351 x .934)	$42,644,975		
FERS OASDI tax in 1990 ($42,644,975 x .0617)			$2,631,195
FERS payroll subject to FICA Tax in 1991 ($130,081,000 x .404 x .953)	$50,082,746		
FERS OASDI tax in 1991 ($50,082,746 x .062)			3,105,130
Increase (1991-1990)			473,935
Other Payroll not covered by retirement	$1,615,000		
Other Payroll subject to FICA tax in 1990 ($1,615,000 x .934)		$1,508,410	
OASDI tax in 1990 ($1,508,410 x .0617)			$93,069
Other payroll subject to FICA tax in 1991 ($1,615,000 x .953)	$1,539,095		
OASDI tax in 1991 ($1,539,095 x .62)			95,424
Increase (1991-1990)			2,355
Total OADSI increase			476,290

Medicare

All employees are subject to Medicare contributions. The rate will remain at 1.45%, but the percentage of payroll subject to FICA will increase from 93.4% in 1990 to 95.3% in 1991.

Total payroll	$131,696,000		
Total payroll subject to FICA in 1990 ($131,696,000 x .934)		123,004,064	
Total payroll subject to FICA in 1991 ($131,696,000 x .953)		125,506,288	
Increase in payroll subject to FICA (1991-1990)		2,502,224	
Increase in Medicare Tax ($2,502,244 x .0145)			36,282

Health insurance premium

The cost of the Government's contribution to the Federal Employees' Health Insurance premium increased by 20.8% effective January 1, 1989. This increase requires an additional $1,102,000 calculated on the 1990 base of $4,329,000.

Employees' Compensation Fund

The increase of $277,000 is for the repayment of the Employees' Compensation Fund for higher costs in the year ending on June 30, 1989 than in the year ending June 30, 1988. The 1989 charges will be reimbursed to the Department of Labor, Employees' Compensation Fund in 1991 pursuant to Public Law 86-767 as amended.

Rent payments to GSA

An estimate of $23,677,000 is required for 1991 currently occupied space. The estimate of $22,679,000 was subtracted from the 1990 estimate for a 4.4 percent increase of $998,000.

Printing and reproduction

The $1,368,000 for printing consists of $180,600 for non-patent printing, $27,200 for patent and trademark file wrappers and $1,160,045 for patent printing. The Government Printing Office forecasts a printing increase of 7.0 percent. This percent was applied to the non-patent printing base of $2,580,000 for an increase of $180,600.

In addition, the printing cost of file wrappers used for storage of patent and trademark application materials increased by $27,200 representing an 11.9 percent increase over the file wrapper base of $288.000. The cost of patent printing represents a 5.7 percent increase to the 1990 patent printing base of $20,300,000. The increase of $1,160,045 is based on provisions of the patent printing data base contract.

	Perm. Pos.	Amount
Other Decreases:		
Management Savings	24	(619)
Civil Service Retirement System	0	(483)
Federal Telecommunications System	0	(200)
subtotal, other decreases	0	(1,302)

Management Savings

The savings of $619,000 are estimates resulting from an anticipated A-76 study.

Civil Service Retirement System

The number of employees covered by the Civil Service Retirement System (CSRS) will continue to drop as positions become vacant and are filled by employees who are covered by the Federal Employees' Retirement System. We estimate the percentage of payroll employees who are covered by retirement system will drop from 64.9 percent for CSRS in 1990 to 59.6 percent in 1991. Computation for CSRS follows:

Payroll subject to retirement system ($130,081.000)	
CSRS cost in 1991 ($130,081,000 x .596 x .07)........	$5,426,979
CSRS cost in 1990 ($130,081,000 x .649 x .07)........	-5,909,580
Decrease in CSRS........	-$ 482,601

Federal Telecommunications System

Following implementation of FTS-2000, GSA anticipates lower rate charges of $200,000 for telephone services.

35 U.S.C. 1-4, 6-42, 141-145, 376
44 U.S.C. 1337-1338

15 U.S.C. 1051-1127 contains provisions of the Trademark Act of 1946 that govern the administration of the trademark registration system of the Patent and Trademark Office.

15 U.S.C. 1511 states that the Patent and Trademark Office is under the jurisdiction and supervision of the Department of Commerce.

35 U.S.C. 1-4, 6-42, 141-145 contains basic authorities for administration of patent laws, derived from the Act of July 19, 1952, and subsequent enactments. Revenues from fees are available to the Commissioner to carry out, to the extent provided for in appropriation acts, the activities of the office. Since fiscal year 1983, all fees are available to the Patent and Trademark Office.

35 U.S.C. 376 authorizes the Patent and Trademark Office to charge international fees for activities undertaken pursuant to the Patent Cooperation Treaty.

44 U.S.C. 1337-1338 contains authority to print patents, trademarks, and other matter relating to the business of the Office.

2. $85,900,000 and, in addition, such fees as shall be collected pursuant to 15 U.S.C. 1113 and 35 U.S.C. 41, 376,

15 U.S.C. 1113(a) provides that: "The Commissioner of Patents and Trademarks will establish fees...for the registration of a trademark or other mark and for all other services performed by and materials furnished the Patent and Trademark Office related to trademarks and other marks."

35 U.S.C. 41(a) provides that: "The Commissioner of Patent and Trademarks will establish fees for the processing of an application for a patent,...for maintaining a patent in force, and for providing all other services and materials related to patents."

35 U.S.C. 42(c) provides that: "Revenues from fees will be available to the Commissioner of Patents and Trademarks to carry out, to the extent provided for in appropriation Acts, the activities of the Patent and Trademark Office" and that "fees available to the Commissioner under Section 31 (15 U.S.C. 1113(a)) of the Trademark Act of 1946 shall be used exclusively for the processing of trademark registrations and other services and materials related to trademarks."

35 U.S.C. 376 authorizes the payment to the Patent and Trademark Office of international fees collected pursuant to the Patent Cooperation Treaty.

3. to remain available until expended.

Public Law No. 100-703, section 2 provides that appropriations authorized under this Act and such fees as may be collected can be carried over and remain available until expended.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

(Obligations in Thousands)

Activity: Patent Process

Goals

- Maintain patent pendency at 18 months and improve patent quality.
- Encourage innovation through the efficient administration of patent laws enacted by Congress in accordance with Article 1, Section 8 of the Constitution, thus enhancing the economic, scientific and competitive strength of the Nation.
- Automate the patent process.

Objectives

- Issue valid patents promptly to secure inventors' intellectual property rights.
- Ensure the prompt issuance of printed patents, which (1) results in the rapid dissemination of new technology; (2) encourages early investment in innovation; and (3) accelerates technological development.
- Provide prompt and efficient services to the public, including the timely and effective adjudication of appeals and interferences before the Board of Patent Appeals and Interferences.
- Continue implementation of PTO's Automation Master Plan, which will result in the automation of patent application processing procedures, classification activities and patent search and retrieval functions.

Base Program

Examination - Professional

The examination of patent applications determines the patentability of claimed inventions. Based on searches of prior art (previous U.S. and foreign patents, technical literature and reports) and on the application of patent law and court decisions, patent examiners either allow or reject an application, prepare briefs on applications appealed to the Board of Patent Appeals and Interferences, make holdings of abandonment, recommend institution of interference proceedings to determine priority of ownership, and rule on certain other post-interference issues such as interference estoppel. In the course of examining a patent application an examiner will make an initial determination on the allowability of a patent (first action) frequently followed by several subsequent communications with the applicant until the application is either abandoned or allowed for issue as a patent (disposal). This activity supports the goal to "Maintain patent pendency to 18 months and improve patent quality". International patent applications are also treated under the PCT whereby international search reports and IPER's are prepared by examiners. This line item also includes funding for patent automaion activities within the PTO through implementation of the Automated Patent System (APS).

Examination - Clerical

Examination clerical is comprised of two parts: the patent examinating corps clerical support staff; and pre-examination processing by the Correspondence and Mail Division and the Office of National and International Application Review (ONIAR). The corps clerical operation provides clerical support to the patent examiners. The Correspondence and Mail Division and ONIAR process and microfilm applications, collect fees and ensure that applications meet all formal requirements before sending them to the examiners. The International Services Division of ONIAR also provides all special handling required under the Patent Cooperation Treaty. File services provide for the retrieval of necessary files from off-site storage facilities. The entire pre-examination function directly supports the 18 month pendency goal.

Board of Patent Appeals and Interferences

The Board reviews disputed examiner decisions with respect to patentability, and adjudicates questions regarding priority of invention. The decisions of the Board are subject to judicial review. Dissatisfied parties may institute civil action in U.S. District Court or appeal to the Court of Appeals for the Federal Circuit. This activity directly supports the goal to "maintain patent pendency at 18 months while improving patent quality."

Patent Printing

This post-examination function provides for printing of patents after they have been allowed by the examiners and the appropriate fee has been paid. This function directly supports the goal of maintaining 18 months patent pendency while improving the quality of issued patents.

Summary of Workload and Performance Data

Performance Measure:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Regular Patent Applications (exc designs):

	FTE	1,560		1,829		269	

This increase consists of examination of patents (321 permanent positions, 269 FTE and $17,313) and patent automation ($13,659).

Examination of Patents	Positions	FTE	Amount
Examination of Patents	321	269	$15,015
Expand Patent Academy	0	0	$359
Project 4000	0	0	$1,939
Total	321	269	$17,313

Examination of Patents (321 permanent positions, 269 FTE, $17,313,000):
This increase along with base resources are required to address the increase in the number of patent applications filed from 140,000 in 1990 to 177,000 cases currently estimated in 1991. This initiative supports a level of effort needed to maintain the goal of 18 months average total pendency in 1991 while improving the quality of issuing patents. This increase will ensure that the PTO continues to examine utility, design and plant patent applications on a timely basis. The PTO will continue to screen patent applications for national security and issue foreign filing licenses. The PTO will also continue to reexamine issued patents, process international patent applications under the Patent Cooperation Treaty (PCT), issue statutory invention registrations, and process patent term restoration applications.

The PTO reached the 18 month pendency goal in 1989. This increase is necessary to enable the PTO to maintain the reduced pendencies despite increased filings.

The net increase of 321 positions, 269 FTE and $15,015,000 is accomplished by new hires of 375 examiners offset by an estimated 212 attritions. Resources are associated with the higher workloads. This increase also includes the gainsharing program for the professional corps. This is a three year program (1989 - 1991) designed to increase production quality and timeliness in the patent examination process and thus avoid greater staff expansions.

Enhance Patent Academy ($359,000):
Extensive studies and evaluations were conducted to ensure that PTO could withstand the increase of 375 hires. The results of these studies concluded the need for enhancing and expanding the Patent Academy to permit assimilation of large numbers of new hires. This expansion will include more concentrated training on the use of commercial data bases, the use of contracted instructors to teach the initial training class and trainer instruction for primary examiners teaching at the Patent Academy. The ability of the PTO to absorb 375 hires in 1991 is dependent, in part, on securing added resources for expanded examiner training and for providing clerical assistants in each Art Unit.

Project 4000 ($1,939,000):
An increase of $1,939,000 is requested to provide office automation capabilities to the Patent Examining Corps. PTO's Project 4000 proposes the distribution of text search-word processing terminals and related systems components to support examiners and related staff by providing:

1) Direct access to text searching of U.S. patents and commercial data bases as part of the examination process;
2) Word processing of office actions and other documents, with the ability to transfer patent data directly from the text data bases into the examiner office actions;
3) Direct access to the PALM database of patent application and production data;
4) Other microcomputer functions such as production calculations for managers, special genetic searching programs, chemical structure software, etc., and,
5) Networking functions such as electronic mail and document transfer.

This project is necessitated for three purposes. The first is patent quality: direct access by every examiner to text searching capabilities increases the quality of the examiners search. The second purpose is improved efficiency: efficiency is enhanced by having the examiner avoid waiting for an available text terminal in a cluster configuration. The third purpose is pendency reduction: the normal period for the typing of an office action is approximately 15.7 days. If the examiner prepares his or her own actions, this period could be reduced to four days.

The benefits from implementation are multiple. First and foremost is the enhancement to quality. From a budget perspective, cost savings related to the elimination of unnecessary clerical typing capabilities are realized. In 1991, these savings total 33 FTE and $ 685,000 (see Examination-Clerical Initatives below). These savings grow to 132 FTE and $3,237,793 by 1995. The system cost is amortized over a five year period through savings realized by eliminating 132 clerical positions and cumulative salary savings of $10,767,000.

This request provides 400 personal computers, including off-the-shelf hardware and software, maintenance, and training. When completed, Project 4000 will extend to 2,600 units.

Patent Process Automation ($13,659,000)

The PTO requests an increase of $13,970,000 for the Automated Patent System (APS) to provide a level of funding consistent with the Automation Master Plan which is currently being revised. This increase for APS reflects changes recommended by the Industry Review Panel (IRP) and its successor, the Industry Review Advisory Committee (IRAC) . The APS costs and benefits are currently being reviewed and a revised plan will incorporate changes for the budget years beyond FY 1991. Additional detail on APS schedules and total funding can be found in the Automation Summary in the back of the Executive Direction and Administration budget activity. The table below shows how automation funds in this line item will be allocated to the systems being developed or operated by the Office of Information Systems.

The PTO also requests a decrease of $311,000 to reflect the decreased share of Management and Administrative Systems by this line item.

(Dollars in thousands)

Patent Process Automation	1991 Base	1991 Estimate	Increase/ (Decrease)
Automated Patent System	$11,984	$25,954	$13,970
Management and Administrative Systems	311	0	(311)
Total	12,295	25,954	13,659

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Examination - Clerical	Pos./BA	756	$24,265	1,020	$33,201	264	$8,936
	FTE	756		986		230	

Examination - Clerical

This increase (264 permanent positions, 230 FTE, and $8,936,000) consists of patent examination support and patent preexamination.

	Permanent	FTE	Amount
Patent Examination Support	145	141	$3,883
Patent Preexamination	119	89	$5,053
Total	264	230	$8,936

Patent Examination Support (145 permanent positions, 141 FTE, $3,883,000)
The program change of 145 permanent positions, 141 FTE and +$3,883,000 for patent examination support is composed of three parts: An increase of 113 permanent positions, 117 FTE and $2,953,000 to maintain reduced patent pendency; an increase for SPE Clerical Support of 65 permanent positions, 49 FTE and $1,615,000; and a decrease of 33 permanent positions, 25 FTE and $685,000 for Project 4000. The increases relate to increased application filings and resultant higher workloads for both activities.

An increase of 113 permanent positions, 117 FTE and $2,953,000 is required for the clerical component supportive of the professional examining corps. The clerical examining corps maintains pending dockets of patent applications; acknowledges receipt and location of the application, and key enters relevant data onto the Patent Application Locating and Monitoring (PALM) automated systems; types, copies references and transmits to the applicant the results of initial professional examination "rejecting" or "allowing" claims in the application ("first action" notice); administratively processes the applicant reply to the first action and the examiner's notice of final rejection or allowance ("disposal"). Resources for the patent examining clerical component are tied directly to the workload received and processed by the professional examining corps. In 1990 and in 1991, we are projecting application receipts of 162,000 and 177,000, respectively. The 1990 budget assumed application receipts of 140,000. Major clerical processing workloads have also increased. Failure to provide these resources will result in backlogs of unexamined and examined cases, will increase the patent pendency period, and will prevent the maintenance of the 18 month pendency goal.

SPE Clerical Support (65 permanent positions, 49 FTE, $1,615,000):
An increase of 65 permanent positions, 49 FTE, and $1,615,000 is requested to provide administrative support to Supervisory Patent Examiners (SPEs) and the art units which they supervise.

Since 1976, the examiner's job has become more complex and additional responsibilities have been added: growth in search file subclasses and the number of patents per subclass; examination under the Patent Cooperation Treaty; use of supplemental and automated search tools; the Patent Law Amendments Act of 1984; reexamination; and numerous changes in practice and procedure. The complexity of the SPE job has also increased: beyond the above examination responsibilities, supervisory and administrative actions have grown in such areas as balancing workloads, and supervision and training of large numbers of new hires. The result of these added burdens is the potential for degradation of quality, productivity, and job satisfaction of examiners and SPEs.

By providing the art unit with clerical support assigned to the SPE, the examiners and SPEs will have more time to devote to their primary professional responsibilities. The clerical assistants will perform such administrative duties as obtaining copies of references and translations, locating and retrieving application files, monitoring application workflow using PALM, and reviewing applications for formal matters. By relieving the examiner and the SPE of these administrative functions, examination will be enhanced and non-examining time will be lessened by reducing the delegation from the SPE to the primary examiner of training time for new hires; and job satisfaction will increase. A primary benefit, however, will be the ability of the SPE to devote more time to training larger numbers of examiners. In the past, the PTO limited its hiring to the +250 range. Because of this initiative (and others identified elsewhere), the PTO proposes to hire 375 examiners in 1991. Without this initiative, the hiring of large numbers of new hires will not be possible.

Project 4000 (-$685,000):
A reduction of 33 positions, 25 FTE, and $685,000 is requested for the Corps Clerical component due to the implementation of Project 4000. As stated above in the patent professional justification for Project 4000, the provision of personal computers throughout the Patent Examining Corps is expected, as one benefit of Project 4000, to significantly reduce the clerical typing requirements. When fully deployed, the typing burden for clerical personnel is expected to be reduced by 82.5 percent. The assumption is that the examiner will produce his or her own actions on the personal computer and reduce the current action mailing period from 15.7 to four days per action.

The 1991 reduction is the first year of clerical savings under Project 4000 which will culminate in a total annual savings of 132 FTE positions and $3.2 million by 1995. This reduction is predicated upon the availability of funds for Project 4000: if Project 4000 is not funded, there are no clerical savings.

Patent Pre-Examination:

The patent pre-examination function must be augmented by 119 positions, 89 FTE, and $5,053,000 to address the annual projected receipt levels of 190,800 (which includes designs) applications by 1991. This increase is comprised of the following components:

	Permanent	FTE	Amount
Correspondence/Mail Div Workload Increase....	27	20	1,047
National Applications Workload Increase......	39	29	1,401
International Applications Workload Increase.	38	29	1,494
Patent Microfilm Workload Increase...........	15	11	1,111
TOTAL......................................	119	89	$5,053

Correspondence and Mail Division Workload Increase (27 permanent positions, 20 FTE, $1,047,000):
The PTO requests 27 positions, 20 FTE and $1,047,000 to process the increase of 37,500 patent applications. (Base funds address 153,300 applications). This increase pertains to the initial review and serialization areas which are the pivotal processing divisions of the PTO. This increase will enable the PTO to meet its production targets and support 18 month pendency. If this increase is not obtained backlogs of unprocessed mail will develop; fee revenues will not be processed in a timely manner; and by the end of the fiscal year, sixty-two days will be added to patent pendency, which will result in the PTO's inability to maintain reduced pendency.

National Applications Workload Increase (39 permanent positions, 29 FTE, $1,401,000):
An increase of 39 positions, 29 FTE and $1,401,000 is needed for the administrative examination of applications due to increased workload. The functions performed by this Division contribute to the movement of a patent application through the pre-examination process. The Division conducts an initial examination of patent applications and drawings for compliance with law and regulations; grants or denies a filing date based on such examination and forwards to the Examining Corps those granted a filing date; acknowledges the acceptance or rejection of applications for Examination; and maintains status records on applications. Without this increase, the division will be unable to meet its twenty-seven day delivery schedule to the Patent Examining Corps which will result in substantial backlogs and processing delays. This will affect the quality and quantity of service provided to the Patent Examining Corps and the public. Base funds support 153,300 applications; not the 190,800 (which includes designs) envisioned for FY 1991.

International Applications Workload Increase (38 permanent positions, 29 FTE, $1,494,000):
An increase of 38 positions, 29 FTE and $1,494,000 is required for the International Application Review Division. A portion of this request, 3 permanent positions, $184,000 and 3 FTE is requested to establish a Director's Division for the Office of National and International Application Review. This reorganization was approved by the Department of Commerce on November 30, 1988. The Director's Office provides overall management direction and oversight for three areas: 1) policy related to the processing of U.S. patent applications; 2) creation of a permanent archival record of the application as filed and; 3) determinations of granting a filing date in accordance with the Patent Cooperation Treaty.

The international division is responsible for all activities involved in the review, clearance, and approval of international patent applications before technical examination. The office corresponds with domestic and foreign applicants on completing the administrative requirements for processing applications under the Patent Cooperation Treaty (PCT) and U.S. statutes. The division ensures that the legal rights of applicants are protected and establishes policy and procedures regarding the administrative handling of domestic and foreign applications under the PCT. The Receiving Office (RO) which processes U.S. origin international applications is expecting an increase of over 2,700 cases above the FY 1990 funded level. This equates to a 38% increase in workload. The Designated Office (DO), which processes foreign international appplications, is expecting an increase of 1,000 cases or a 15% increase in workload. The requested increase is necessary if the PTO is to meet mandatory requirements under Chapters I and II of the Patent Cooperation Treaty.

Patent Microfilm Workload Increase (15 permanent positions, 11 FTE, $1,111,000):
In order to ensure that a permanent record is maintained of each document as filed, in case of litigation, loss, or for sale as requested by the public, the PTO is requesting an increase of 15 positions, 11 FTE and $1,111,000 to microfilm the increased volume of (+37,500) patent applications. Included in this request is $480,000 for three micrographic cameras needed to replace cameras which have reached their expected life of twenty years plus. The requested increase will enable the PTO to maintain the 18 month pendency and maintain service levels by allowing the Micrographics Branch to process the increased workload in a timely manner.

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Appeals and Interferences..................	Pos./BA	105	$6,589	110	$6,857	5	$268
	FTE	97		101		4	

Processing Interferences (5 permanent positions, 4 FTE, +$268,000)
An increase of five permanent positions, four FTE and $268,000 is requested for the Board of Patent Appeals and Interferences to address a growth in interference case inventories. Currently, the inter partes proceedings at the Board are handled by six Examiners-in-Chief. The constant increase in the number of pending inter partes proceedings has been caused primarily by the change in the procedure which came into effect when the interference rules were revised in 1985. The change was beneficial in that it reduced the number of "fragmented" inter partes proceedings and allowed the Board to decide all relevant issues between the rival claimants. However, the change also greatly increased the workload placed on the individual Examiners-in-Chief by: placing the responsibility for conducting the interlocutory stage of an inter partes proceeding on the Examiner-in-Chief; permitting questions of patentability to be raised; and providing that all motions be decided by the Examiners-in-Chief, rather than by the patent examiner. At the same time, the subject matter involved in each inter partes proceeding has become more complex, involving rapidly evolving technologies such as biotechnology and superconductors.

Prompt disposition of cases before the Board is important to industry and the patent legal profession. In many instances the subject matter involved in inter partes proceedings pending before the Board is at the leading edge of technology. Many business, investment, and licensing decisions are dependent upon the outcome of proceedings before the Board. In order to avoid uncertainties in the law, and insure uniformity in the examination of patents and the practice of patent laws, it is essential that issues pending before the Board be promptly decided. Failure to provide this increase will cause additional delays and increase the pendency before the PTO.

Patent Printing (+$4,641,000):
This request for an increase of $4,641,000 from the base in printing and reproduction provides sufficient funds to allow the obligation of an additional 16,600 patents, for a total of 102,000 patents obligated. The printing contract consists of two parts; the Data Base contract which will increase by $3,403,000 due to increased production volumes; and 2)the GPO printing costs which will increase by $1,238,000 due to increased printing volumes. This growth is related to increased output from the Examining Corps addressing higher filing levels and the effort to maintain patent pendency at 18 months.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Obligations in Thousands)

Activity: Trademark Process

Goals and Objectives

Goals:

- To stimulate business investments and protect consumers by providing prompt registration of trademarks, improve trademark quality and to provide the public with information concerning pending and registered marks.
- To automate the patent and trademark processes.

Objectives:

To maintain the achievements of 1985 through 1991:

- the reduced trademark pendency of three months to first action for all cases and thirteen months to disposal for use based cases with timely disposal of all others.
- the reduced Trademark Trial and Appeal Board adjudication period of twelve weeks.
- the automated operation of Trademark Process functions including searching and photocomposition.

To implement the provisions of the Trademark Law Revision Act of 1988, the principal component of which is referred to as "intent-to-use".

Proposed Legislation

Public Law 100-703 authorizes the programs of the PTO through the end of FY 1991.

Base Program

Examination of Trademarks

Trademark examination includes examination of applications for the Federal registration of trademarks. Based on searches of prior registrations and pending applications, and application of Trademark law and court decisions, Trademark attorney advisors either allow or reject applications for registration. In the course of examining a trademark application, the attorney advisor will make an initial determination on the registrability of the trademark (first action) which, after a response by the applicant, will generally be followed either by (1) forwarding the trademark for publication in the **Trademark Official Gazette** for opposition, or (2) final rejection and subsequent abandonment or ex parte appeal of the attorney's decision to the Trademark Trial and Appeal Board. Trademark examination activities also cover post registration processes associated with the maintenance of the registration. This involves the examination of: (1) affidavits of continued use, (2) applications for renewal of registrations, and (3) applications for amendment of registrations.

The Trademark Law Revision Act of 1988 was implemented on November 16,1989. The Act amends the trademark law so as to allow an applicant to file an application based on a bona fide intention to use the mark in commerce. Heretofore, an applicant had to have used the mark in interstate commerce or have owned a foreign application of registration prior to filing for a U.S. registration. The processing and examination of the three types of applications, i.e., use, intent-to-use and foreign-based, is essentially the same; however, an applicant under the "intent-to-use" provision of the Act will have a period of up to three years to make use of the mark in commerce, at which time a second examination will take place.If the application clears the second examination, a registration will issue.

This line item includes funding for mail services in support of all trademark functions and for file maintenance of registered and abandoned files. This line item also includes funding for Trademark Automation. Trademark automated systems are designed to improve search effectiveness; improve file integrity; provide a full text data base of applications and registrations for use by office attorneys and other employees, and the public; and to provide support for the automated photocomposition of the **Trademark Official Gazette** and related registration documents.

Trial and Appeal Board

The Trademark Trial and Appeal Board (TTAB) decides adversary proceedings involving interference applications, oppositions to registration, concurrent use applications, and cancellation petitions. The TTAB also hears ex parte appeals resulting from final refusals of registration by Trademark attorney advisors.

Trademark Printing

After an office attorney forwards a case for publication, the mark is printed in the **Trademark Official Gazette** for opposition. If an opposition proceeding is filed within 30 days, the case goes to the TTAB for an inter partes opposition hearing. If a mark filed under the use and foreign-based provisions of the Act is not opposed, the mark is registered, a certificate of registration is printed and mailed to the applicant, copies are made for sale to the public, a notice of registration is printed in the **Trademark Official Gazette**, and a record of the registration is kept in the Patent and Trademark Office. If a mark filed under the intent-to-use provision is not opposed, a Notice of Allowance will be issued by the PTO and the applicant then has a period of six months to use the mark in commerce or request further six month extensions, up to a total of three years. After use is perfected, the mark will undergo a second examination by an attorney advisor, and, if entitled to registration, a notice of registration will be printed in the Offical Gazette and a record of the registration will be maintained in the office.

Summary of Workload and Performance Data

Performance Measure:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Pre-examination:

Pendency to first action - all cases (in mos)	2.5	2.8	3.0	3.0
Pendency to registration/abandonment-use cases (in months)	13.3	13.8	13.0	13.0
Contested cases - Trial and Appeal Board:				
Received during the year	3,694	3,637	3,800	4,892
Disposed of during the year	(3,603)	(3,642)	(3,900)	(4,134)
Pending (end of year)	5,597	5,592	5,492	6,250

1/ Applications covering two or more classes of goods or services are counted as two or more applications.

2/ With the implementation of Intent-to-Use legislation in November 1989, 1990 filings are estimated to increase by 25 percent over the original 1990 estimate of 80,400. 1991 filings are estimated to increase by six percent above the revised 1990 estimate.

Department of Commerce
Patent and Trademark Office
Salaries and Expenses
INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Examination of Trademarks....................	Pos./BA	279	$14,278	397	$18,908	118	$4,630
	FTE	272		344		72	

This increase is composed of two initiatives: an initiative for Examination of Trademark and an initiative for Trademark Process Automation.

Examination of Trademarks (118 permanent positions, 72 FTE, $3,149,000)

The PTO requests an increase of 118 permanent positions, 72 FTE and $3,149,000 for Examination of Trademarks.

	Permanent Positions	FTE	Amount
Trademark Examination.........................	103	61	$2,629
Trademark Post Registration..................	11	8	243
Trademark Pre-Examination....................	4	3	277
Total.......................................	118	72	$3,149

Trademark Examination (103 permanent positions, 61 FTE, $2,629,000)
An increase of 103 positions, 61 FTE and $2,629,000 is requested to address the increased workload in Trademark examination. The Trademark Law Revision Act of 1988 was implemented on November 16, 1989. The Act now permits the filing of a trademark application based on an applicant's bona fide intention to use the mark in commerce, and retains the other two bases for filing an application - actual use in commerce or ownership of a foreign application or registration. Because of the new intent-to-use provision in the Act, it is anticipated that application filings will increase 25 percent over the original 1990 budget estimate and by 6 percent annually in subsequent years. Examining and support staff must be increased commensurate with the increased filings to maintain pendency of three months to first action for all cases and 13 months to disposal for use cases with timely disposal of all other applications. If increased staffing is not provided, quality of examination and service to the public will deteriorate and the ability of parties to make informed marketing decisions regarding use of their marks in the marketplace will be impaired.

With the anticipated volume of applications and workload, this increase provides for two additional Law Offices to be established in 1991. This increase is essential to ensure effective management of training and workloads in the Examining Operation.

A 1988 initiative was approved for key entry of Trademark data from new applications into the TRAM/T-SEARCH systems. An increase is needed to maintain the viability of the application data base on a timely basis and, hence, to continue to maintain pendency for use-based applications. This increase allows the contract to expand as applications increase.

Trademark Post Registration (11 permanent positions, 8 FTE, $243,000)
An increase of 11 positions, 8 FTE and $243,000 is necessary to process the increased filings of post registration papers within the Trademark Service Division. Section 8 and 15 affidavits are increasing significantly because of the record high levels of registrations issued six years ago. (Section 8 affidavits must be filed between the fifth and sixth year after registration). It is anticipated that the demand for certified copies will increase significantly as a result of the increased application filing activities under the Trademark Law Revision Act of 1988. The requested increases are required to handle increased workloads.

Trademark Pre-Examination (4 permanent positions, 3 FTE, $277,000)
An increase of four positions, three FTE and $277,000 is necessary for mailroom functions. The additional resources are required to meet the increased demands resulting from higher filings under the Trademark Law Revision Act of 1988. The additional staff will be hired for the second shift operation which was implemented in FY88. In addition, as the number of filings and disposals continue to increase, the demand for the retrieval of trademark files by both the Trademark examining operation and members of the public will increase. This increase is essential to maintain trademark pendency and the high standards for mail processing and file retrieval.

Trademark Process Automation

The PTO requests an increase of $1,481,000 for automation initiatives. Of this amount, $992,000 is requested to continue leasing and maintaining the automated Trademark Search System (T-Search). Examining attorneys are using both the word and design capabilities of T-Search to conduct all trademark searches during examination and the system is deployed in the Trademark Public Search Library. Modernization of the T-Search terminal components (hardware and software) to improve system performance will require an increase of $339,000. The current hardware configuration of B-22 terminals was designed in 1981 and the terminals are no longer manufactured or sold. The remainder of this increase, $150,000, is requested to support system performance enhancements that are available from the contractor. Each year a number of requests for modifications to the T-Search System are generated by the examiners and other users. It is essential that the performance of the T-Search System be improved to allow the maintenance of the reduced trademark pendencies and quality examination in the Trademark operation. We anticipate a requirement to upgrade T-Search to expand the systems capacity to handle additional users and the increased filings expected under intent-to-use. On May 31, 1989 trademark text databases were released for purchase by the public. PTO anticipates a demand for the image database. A modification to the T-Search System will allow digitized image data to be written to magnetic tape in a standard format so that the images can be sold to the public.

All trademark initiatives are fully financed by Trademark user fees.

Trial and Appeal Board	Pos./BA	37	$1,758	45	$2,115	8	$357
	FTE	39		45		6	

Trademark Appeals (8 permanent positions, 6 FTE, $357,000)
An increase of eight positions, six FTE and $357,000 is required due to Trademark application filing increases of 25 percent in 1990 and another six percent annually in subsequent years due to the implementation of the Trademark Law Revision Act of 1988. As the additional applications are examined in the Trademark Examining Operation and mature into FINALS or publications for opposition, ex parte appeals and inter partes (oppositions and cancellations) filings will increase by a commensurate level at the Trademark Trial and Appeal Board. This increase will be necessary to address these workload increases.

This initiative is fully financed by Trademark user fees.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Obligations in Thousands)

Activity: Information Dissemination

Goals and Objectives

Goals:

- Automate the Patent and Trademark processes.
- Disseminate information relating to new technology and trademarks through the sale of copies of issued patents and registered trademarks.
- Stimulate innovation through prompt dissemination of patent information.
- Organize technological and trademark information in a manner which will be readily accessible to both examiners and the public.

Objectives:

- Facilitate effective dissemination of patent and trademark information to the user community through automation of the patent and trademark information retrieval systems.
- Efficiently process allowed patent applications.
- Properly maintain patent and trademark search room facilities, instruct the public in their use, and fill requests for copies of official documents.
- Maintain a current and accessible subject matter classification system for use in locating prior art and new technology; ensure the integrity of related search files and data records; and facilitate retrieval through automated patent search systems.
- Further disseminate patent and trademark information through the Patent Depository Library systems and technology assessment and forecast programs.

Proposed Legislation

Public Law 100-703 authorizes the programs of the Patent and Trademark Office through fiscal year 1991.

Base Program

Customer Services

The Customer Services activity includes reproduction services, assignment functions, and file integrity maintenance of the patent and trademark search rooms. This includes the production and sale of certified and uncertified copies of office records and printed copies of patents and trademark registrations. Legal instruments that affect or transfer property rights in patent and trademark cases are received, examined, and ministerially recorded. Assignment information on Patents and Trademark applications and registrations is made available for public use in the Assignment Search Room. PTO maintains a patent search room and a trademark search room containing over 15 million U.S. patents and over 3.3 million trademark files primarily for public use. The public can also access the Automated Patent System and the Trademark T-Search automated systems in the public search rooms.

Publication Services

Publication Services manage, monitor, and execute the various stages through which allowed applications progress before they are issued as patent grants. Program activities include preparing, scheduling, and transmitting allowed applications for printing; developing and administering document quality standards; certifying and distributing patent grants; and disclosing information to the public, principally through the two weekly editions of the Official Gazette (one patent edition and one trademark edition). The PTO maintains a Patent Maintenance Fee Division for notification and termination actions and collection of maintenance fees.

Data and Document Retrieval Systems

The programs of this line item maintain and update a subject matter classification system for U.S. and foreign patents and related technical literature that is vital to the patent application examination process. The examiner search files, containing more than 15.6 million U.S. patents, 13 million foreign patent documents, and about 1.4 million technical literature documents, are continually expanding. About 300,000 U.S. patents and cross-references and over 400,000 distinct foreign patents are added annually. A concentrated effort is being made to reclassify the files by expanding the classifications for new technologies and subdividing the expanding search files of patents and technical literature into technologically up-to-date and smaller, more efficiently searched classification groups. This is necessary to cope with the increasing complexity of technology and the growing size of the search file. Other resources are for foreign patent processing, maintenance of a Scientific Library, the Technology Assessment and Forecast program and the Patent Depository Library System. This line item also includes funding for patent automation activities.

Department of Commerce
Patent and Trademark Office
Salaries and Expenses
INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Customer Services	Pos./BA	105	$8,647	155	$10,561	50	$1,914
	FTE	112		154		42	

The increase for this line item is composed of two initiatives. The first is for increased services workload and the second is for public search room services.

Increased Services Workload: (34 permanent positions, 26 FTE, $1,721,000)
The PTO requests 34 positions, 26 FTE and $1,721,000 to process public requests for services entirely funded by fees. The request is composed of the following components:

	Permanent Positions	FTE	AMOUNT
Public Service Center	4	3	194,000
Assignment Workload Increase	26	20	1,114,000
Certification Workload Increase	4	3	103,000
Copy Sales Workload Increase	0	0	310,000
TOTAL	34	26	$1,721,000

Public Service Center: (4 permanent positions, 3 FTE, $194,000)
An increase of four positions, three FTE and $194,000, which is totally fee supported, is needed to handle a 20% increase in workload. The enhancement will enable the Public Service Center to meet its goals of timely responses to requests from the public for information on PTO products and services and problem resolutions. The Center is designed as the focal point for all questions and inquiries on the PTO and, due to its success and increasing intellectual property activity the Center is experiencing a significant increase in the volumes of public contacts with the Office. If enhancements are not received then the Center will not be able to meet its goals and an increasing number of public and in-house complaints will be received.

Assignment Workload Increase: (26 permanent positions, 20 FTE, $1,114,000)
Increased filings have increased the workload for processing assignments. The assignment function records the transfer of ownership rights of a patent or trademark. Base resources have been provided for processing 127,000 patent and trademark assignments. The PTO estimates 276,225 patent and trademark assignments to be recorded in FY 1991. This equates to an increase of over 30%. Twenty-six positions, twenty FTE and $1,114,000 is needed to process this increase.

Certification Workload Increase: (4 permanent positions, 3 FTE, $103,000)
The Certification division expects a 30% increase in requests from the public for certified copies of patent application files, office records trademark files, and registrations due to the increase in workload for FY 1991.

Four positions, three FTE and $103,000, which is totally fee funded, is requested in order to prevent delays in the certification service and deterioration of products. If the PTO fails to process user requests for certified copies on a timely basis the result is the loss of filing dates of U.S. applicants in foreign countries, as well as loss of revenues to the PTO.

Copy Sales Workload Increase: ($310,000)
An increase of $310,000 for copy sales and public photocopier contracts cost increases is requested to keep pace with the volumes of patents issued. The funds requested will allow this mostly contractually operated function to expand consistently with the growth in copy requests an still maintain all standards for product quality and timeliness. This initiative aligns program income and secures a permanent funding base for the expanded program. This increase is supported totally by user fees.

Public Search Room Services: (16 permanent, 16 FTE, $193,000)
The PTO requests an increase of 16 permanent positions, 16 FTE and $193,000 to establish a permanent funding base for the Patent and Trademark Automated Search Rooms. Federal rules have recently been published in the Federal Register to establish fees for public use of the PTO's automated search systems (APS-Text and T-Search). The purpose of this initiative is to secure a permanent funding base in the budget for thes two totally fee supported functions. The resources requested are consistent with the costs reviewed and approved by the Administration during the review of the Federal Register notice in early 1989. The actual amount of this request is $1,141,000 which will be reduced by $961,000 This amount was initally approved in the FY 1986 Congressional Request for the Automated Trademark Public Search Room. When this request was submitted the PTO assumed cost estimates which were structurally different from the current needs. Therefore, we are reducing our request by that amount.

The PTO is a service oriented institution which has established goals for providing the public with records of property rights. Without this increase, services to the public will be unable to market intellectual property and the public will not have current ownership information which will adversely affect U.S. Commerce.

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Publication Services..........................	Pos./BA	124	$4,216	144	$4,901	20	$685
	FTE	116		131		15	

Patent Post Examination (20 permanent positions, 15 FTE, $685,000):
The PTO requests an increase of 20 positions, 15 FTE and $685,000 to process a 20% increase in the volume of maintenance fees and certificates of corrections. Of this amount, 12 FTE and $599,000 is required to process 101,000 printed patents, an increase of 15,900 prints above the 1990 estimates. These additional funds are requested to schedule and manage the processing of allowed patent application files and associated drawings for creating a full patent text machine language data base and the composition and printing of weekly patent issues and related announcements in the *Official Gazette*. The timely publication of patent issues is necessary to maintain the reduced patent pendency. The patent text data base is also required for the APS automated text search system used by all examiners. An increase of four positions, three FTE and $86,000 is requested for the Patent Maintenance Fee Division. The workload to process the maintenance fee has risen quickly as patent issues from the Examination Corps have increased to address the patent pendency reduction plan in an environment of accelerating receipts. Sufficient resources are not available within base to process the projected volume of 117,000 maintenance fees and terminations in the Patent Maintenance Fee Division. As a result, backlogs in collection and notification of maintenance fees will increase. If backlogs are permitted to grow, the public will not be made aware of which patents have been extended and which have been terminated. The PTO will not have fulfilled the requirements of Public Laws 96-517 and 97-247 which deal with the due-date notification and collection of patent maintenance fees. The PTO will also suffer an income shortfall.

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Data and Document Retrieval Systems.........	Pos./BA	295	$32,160	320	$34,303	25	$2,143
	FTE	297		317		20	

This initiative consists of three parts: 1) patent search file integrity (10 permanent positions, 8 FTE, $243,000); 2) examiner search services (15 permanent positions, 12 FTE and $2,586,000); and 3) information dissemination automation (-$686,000).

Patent Search File Integrity (10 permanent positions, 8 FTE, $243,000)
This increase consists of three parts: 1) New Issue Processing (6 permanent positions, 5 FTE, $145,000); and 2) Clerical Original References (4 permanent positions, 3 FTE, $95,000); and 3) Japanese Abstracts ($3,000).

An increase of six positions, five FTE and $145,000 is requested to process the increased volume of new U.S. patents. The annual volume of newly issued U.S. patent copies to be processed, labeled, and forwarded to the examiner search file and the public search file has grown from 572,295 in FY 1985 to 636,888 in FY 1988. Current estimates anticipate a volume of 836,000 documents to be processed in FY 1991. With the additional work, a variety of recurring problems with the printing contractor, and the need to improve the quality of the work produced have created an extremely difficult situation. These resources will provide timely support to the examiners and other PTO employees who rely on the search files. If this staffing level is not increased, a decrease in the quality of the search file can be anticipated.

The second part is a request for four positions, three FTE, and $95,000 to clerically process an increase of 10,000 Original References (ORs) to 113,000 ORs for 1991. This increase is needed to keep pace with the professional OR goal. If documents are professionally reclassified they should be clerically processed and returned to the search files as quickly as possible. Completed professional reclassification projects are of no value physically awaiting clerical processing efforts. Increased support in preparing associated search tools in a timely and accurate fashion is also required. It is imperative that the search files be restructured through the reclassification process to support comprehensive, quality searches by the examiners.

The third part addresses increased requirements for the 1990 initiative dealing with the classification of Japanese Abstracts. This request addresses an increase in Japanese patent documents in 1991 beyond the scope of the 1990 initative. The Japanese Patent Information Organization (JAPIO) is increasing the scope of their English Language Abstracting Service from 70 percent to 100 percent of the unique, published Japanese patent applications. The Japanese documents must be classified according to U.S. standards. The Patent Cooperation Treaty requires the PTO to place in our search file unique Japanese patent documents having an English language abstract. More importantly, the goal of issuing high quality U.S. patents requires examiner access to complete search files, files that must include patents examined by the world's largest patent office----the Japanese Patent Office.

Examiner Search Services (15 permanent positions, 12 FTE and $2,586,000)
This initiative consists of three parts: 1) Genetic Sequencing Search (Biotechnology) (6 permanent positions, 5 FTE and $1,734,000); 2) On-line Commercial Data Base Searching ($257,000); and 3) Examiner Training for the International Patent Classification (IPC) System (9 permanent positions, 9 permanent positions, 7 FTE and $595,000).

The first part of this increase for six positions, five FTE and $1,734,000 is requested in support of the biotechnology patent applications. The world-wide activity in the field of biotechnology is signified by projections for the doubling of known sequences every one to two years. Paralleling this growth are projections that biotechnology patent applications with sequences will continue to grow in number. With a growing backlog of these applications, industry, and the Congress and the PTO became extremely concerned about the speed and quality of examination of biotechnology patent applications. This urgent situation led to several top priority steps beings taken, including establishment of a new biotechnology patent examining group, and the acquisition of a basic computerized system for searching sequences. Resources are needed in several areas in order to develop effective search tools that will aid examiners in producing good quality, timely patents. These resources will provide for automatic input, early search access, provide for future public access and dissemination of patent sequence data bases and facilitiate efficient and accurate printing of issued patents.

The second part of this increase for $257,000 which is requested to expand examiner commercial data base searching. Thorough and timely patent examinations require that patent and nonpatent literature in commercial data bases be searched in addition to the prior art contained in examiner search files. Over recent years, examiners have come to rely heavily on searching a broad range of technical fields in this way. In some subject fields, online searching is the only practical method for searching the pertinent prior art. Patent pendency and patent quality are both impacted in a positive way by online searching of commercial data bases. Availability of the needed funds will permit continued use of this important search method without interruption, and to the extent needed by patent examiners. This situation will contribute to pendency maintenance and an increase in the quality of patents. A funding shortage of the current magnitude will require a cut in service by one-third and imposition of strict rationing. Negative impacts will include a reduction in patent quality, increased pendency, and lowering of examiner morale.

The third part of this increase for nine positions, seven FTE, and $595,000 is requested for more effective examiner training in the use of the International Patent Classification (IPC) System. The IPC is the principal tool to be used by the patent examiners in search of foreign patents in APS. Studies and feedback from foreign patent offices have revealed a serious deficiency with our patent examiners. As evidenced by their assignment of IPC classification to issuing U.S. patents, the accuracy of placement of these documents is insufficient to insure adequate search coverage. Further, in an increasing number of technology areas, the IPC is being used as the only classification system by which foreign documents can be accessed from our paper search files. As APS is deployed, the IPC will become the examiners' main search resource for foreign patent information. Consequently, continuing development of IPC based paper search files and building of the foreign patent portion of APS requires the continuing participation by those knowledgeable of the esoterica of foreign patent literature and, as well, the incorporation of the comprehensive sources of foreign patent data.

This request will institute a program to verify, and as necessary, correct the quality of the assignments by examiners of the IPC categories. Data will be gathered in this new program to identify IPC and organizational areas requiring training emphasis. The training will be structured and provided.

The IPC validity and quality checks, coupled with continuous, focused, training reinforcement, will progressively improve the examiners' abilities to use the IPC as an effective search tool. The continuing contribution of foreign patent expertise to the building of IPC based paper search files and the APS foreign patent module will markedly improve the PTO's coverage of the foreign patent literature in the patent examining process, resulting in significant quality improvement of issued U.S. patents. Failure to take these or similar actions will result in a continuation of the PTO's marginal coverage of the foreign patent literature and a progressive degradation of the quality of U.S. patents in relation to the patents of other issuing authorities, i.e., the European Patent Office.

Information Dissemination Automation (-$686,000)

This change consists of two parts. An increase of $342,000 is requested to purchase magnetic tapes to fill customer orders and to support the Trilateral data exchange agreement with the Japanese Patent Office (JPO) and the European Patent Office (EPO). One of the primary objectives of the PTO is to satisfy the public's demands for dissemination of PTO information. This initiative is fully funded by user fees.

A decrease of $1,028,000 is requested for the Information Dissemination share of the costs of the Automated Patent System. This system is designed to improve the quality of search and retrieval. The 1991 estimate for automation initiatives is explained in detail in the Automation Summary section of the Executive Direction and Administration budget activity.

(Dollars in thousands)

Information Dissemination Automation	1991 Base	1991 Estimate	Increase/ (Decrease)
Automated Patent System	$13,147	$12,119	($1,028)
Management and Administrative Systems	0	342	342
Total	$13,147	$12,461	($686)

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Obligations in Thousands)

Activity: Executive Direction and Administration

Goals and Objectives

Goals:
- Maintain patent pendency at 18 months and improve patent quality.
- Stimulate productivity and economic development.
- Provide executive direction for the administration of the Patent and Trademark Office (PTO).
- Administer legal, international, legislative, management and automation activities.
- Maximize the effectiveness of patent and trademark systems in the United States.
- Automate the Patent and Trademark processes by 1990's.
- Strengthen worldwide protection of intellectual property.

Objectives:
- Improve management planning and control processes through automation, systems analysis methodology, and the centralization of financial management and budgetary responsibility.
- Improve the protection of intellectual property rights in the U.S. and abroad by developing domestic legislation and international agreements.
- Provide support services to all PTO operations promptly, efficiently and competently.
- Perform quality reviews of examined patent applications.
- Provide centralized guidance, coordination and implementation of PTO internal improvements.
- Administer and manage automation initiatives to aid in developing new search, retrieval and display systems.

Proposed Legislation

Public Law 100-703 authorizes the Patent and Trademark Office programs through fiscal year 1991.

Base Program

Commissioner

The Office of the Commissioner, in cooperation with the Department of Commerce and OMB, determines domestic patent and trademark policies, and, in cooperation with the Department of State, the United States Trade Representative, and other DOC bureaus develops international intellectual property policies and participates in interagency groups to develop intellectual property policy recommendations. The Commissioner directs the examination and issuance of patents as well as the examination and registration of trademarks, and directs the dissemination of information contained in patent and trademark documents. The Commissioner renders quasijudicial rulings on patent and trademark issues arising in the PTO and serves as a liaison with intellectual property bar associations, industry, the public, and between the Administration and Congress.

Solicitor

The Solicitor handles all litigation to which the Commissioner is a party; investigates legal matters for the Commissioner; prepares opinions and decisions on legal questions; provides advice and assistance on legislative matters, application of administrative laws and regulations and maintains the Solicitor's library.

The Office of Enrollment and Discipline examines and registers attorneys and agents to practice before the Patent and Trademark Office; investigates complaints of misconduct and brings disbarment proceedings against registered attorneys and agents.

Legislation and International Affairs

The Office of the Assistant Commissioner for External Affairs supervises the Office of Legislation and International Affairs and the Office of Public Affairs.

The Office of Legislation and International Affairs drafts legislative and policy proposals concerning intellectual property matters, prepares supporting documentation to carry out the legislative program and the policies of the Commissioner, and reviews and prepares analyses of other legislative proposals concerning intellectual property matters. This Office prepares Congressional testimony for the Commissioner and other PTO and Department officials and maintains a liaison with Congress, the intellectual property bar associations, industry, and others concerned with proposed and pending legislation.

This Office promotes international development of intellectual property systems and advocates improvements and more cost effective means of protecting intellectual property rights of U.S. nationals throughout the world. This includes developing and maintaining multilateral systems for protection of intellectual property rights; assisting in the establishment of bilateral agreements with other intellectual property offices; participating in the intellectual aspects of trade consultations; promoting the establishment of adequate systems in developing countries for the protection of intellectual property rights; and developing international standards and procedures to encourage foreign filing by U.S. nationals and to facilitate access to the information contained in patent and trademark documents.

The Office of Public Affairs arranges media meetings for the Commissioner and other senior PTO officials, prepares press releases on PTO activities, and through printed materials, informs the public of the patent and trademark systems and the operation of the PTO.

Management Planning

Management planning offices implement budget, fiscal, personnel and long range planning policy. Offices included in the management planning function develop and monitor the long and short-term objectives of the PTO; assist on personnel matters, recruitment, position classification and pay administration, employee development, personnel/payroll processing, records administration, and employee labor relations programs; operate a management information system providing current and accurate information on PTO program production; and maintain PTO budgetary and financial systems.

Administrative Services

Support services for PTO are: administration of equal employment opportunity programs; printing services and maintenance of official records; procurement support and contract management; supply, property, and photocopier management; telecommunication, space and lease management; and travel and shuttle services. Other services include: managing performance measurement systems, evaluation of proposals on organizational changes and administrative issuances, and coordination of government-wide management improvement programs.

Automation

This function is responsible for implementation of the Office-wide Automation Master Plan. This line item provides funds for patent and data base automation and to direct, plan and provide automation support for the PTO. Support is provided for existing ADP systems as well as for the patent and trademark automation programs. Support includes: systems analysis and design; acquisition or development of centralized computer systems, software and automated information systems; installation and test of systems; operation and maintenance of information systems; and operation of general purpose ADP and communication equipment.

Quality Review

The Quality Review program evaluates and monitors patent product quality in the examining process by conducting reviews on a four percent sample of all regular patent applications allowed by the Patent Examining Corps. The Quality Review program also provides feedback to management for evaluation and corrective purposes and makes recommendations for procedural change.

Space Acquisition and Management

The PTO currently leases all of its space for employees and workstations from private contractors, with the exception of 49,037 square feet in the Department of Commerce Hoover Building. The majority of the PTO space holdings are located in 10 office buildings in the Crystal City, Arlington, Virginia area and comprise 848,404 square feet of space. Another 70,345 square feet of space is located in three warehouses in Arlington and Newington, Virginia and is primarily used for the filing and retrieval of patent and trademark files. Since 1986, the PTO has been responsible for the management of nine buildings in the Crystal City complex where the PTO is the major Federal lease holder. Management responsibilities include planning, directing, coordinating, monitoring, and administering the PTO's delegation agreement for the management of all real property occupied by the PTO. These responsibilties were delegated to the PTO from GSA when that agency decentralized its lease management functions. The yearly rental payments and management costs represent a sizable portion of the PTO obligations.

Summary of Workload and Performance Data

Commissioner:

The Commissioner testified before Congressional committees on general oversight, the budget, and other legislative proposals and continued to implement the plan to reduce patent and trademark application pendency times and to automate the PTO. He participated in domestic and international patent and trademark activities, including various meetings of patent and trademark law associations. The Commissioner's Education Round Table continues to bring together experts in critical and creative thinking skills to guarantee that Americans will have the innovative skills to meet the challenges of an increasingly competitive world.

Summary of Workload and Performance Data

Solicitor:

Performance Measure:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Cases disposed	132	142	170	170
Freedom of Information Act requests	143	132	140	140
Legal opinions rendered	513	503	800	800
Answers to inquiries	5,787	4,358	3,000	3,000
Publication of Patent and Trademark suits	2,355	1,856	2,500	2,500
PTO Employee Depositions	27	14	30	30
PTO Decisions forwarded for Publication	158	118	170	170
Attorneys tested	913	1,071	900	1,050
Attorneys registered	455	511	450	550
Disciplinary proceedings	3	3	3	5

Legislation and International Affairs:

The Office of Legislation and International Affairs prepared testimony and urged Congressional action on a wide variety of legislative proposals and intellectual property rights, including legislation concerning patenting higher life forms. The Office provided technical assistance in drafting intellectual property legislation forwarded by the Secretary of Commerce and prepared background material. The Office participated in international efforts to enhance the protection of intellectual property and the administration of intellectual property laws, such as the consultative meetings on the revision of the Paris Convention, Committee of Experts on Harmonization of Patent Laws, and the Trilateral Conference on Automation. The Office also participated in bilateral negotiations on strengthening intellectual property laws with developing countries, including Korea, Taiwan, Thailand, Indonesia, Turkey, Brazil, Chile, Egypt and Saudi Arabia and training and assistance programs in the U.S. and abroad for nationals of developing countries including China, Korea, Taiwan, Saudi Arabia, and Tanzania. Also, the Office worked with the Department of Commerce, Department of State, and the U.S. Trade Representative on trade-related intellectual property issues, such as negotiation of international standards within the framework of the GATT, providing technical assistance in the "Section 301" process and leading a working group on patent issues in Japan.

Management Planning:

Summary of Workload and Performance Data

Performance Measure:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Accounting transactions processed............	24,451	27,050	24,500	24,500
Deposit account transactions processed.......	410,824	428,706	430,000	472,495
Cash receipt transactions processed..........	743,680	783,071	750,000	790,195
Personnel actions processed..................	15,818	13,743	19,000	24,200
Payroll actions processed....................	17,702	20,357	23,000	27,830

These offices continued cooperative automation exchange efforts with the European and Japanese Patent Offices, and carried out the fiscal and budgetary responsibilities of the PTO.

Automation:

Automated Patent System (APS):
Progress in responding to recommendations of Industry Review Panel; successful stability test of APS image search and retrieval capability in an examining group demonstrates viability of APS as an operational system in a production environment; significantly strengthened technical, administrative and contract management of APS program; backfile image capture of U.S. patents completed in 1989; APS text search capabilities available to the public in the patent Public Search Room.

Trademark Automation:
Trademark examining attorneys use T-Search in a production environment; T-Search available to the public in the Trademark Public Search Room; continued efforts to correct errors in trademark backfile data bases.

Management and Administrative Systems:
Support operations maintained on the A-15 mainframe; major procurement for equipment (terminals, printers, bar code readers, etc.) which will communicate with the A-15 mainframe, will be installed in distributed user areas to facilitate management and administrative support.

Quality Review:

Summary of Workload and Performance Data

Performance Measure:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate

Maintain Patent Attorney Roster: (1 permanent position, 1 FTE, $72,000)
An increase of one position, one FTE and $72,000 is necessary to handle the increased number of applicants desiring to be admitted as registered patent attorneys or agents to practice before the PTO. The Office of Enrollment and Discipline develops and grades tests for admission to practice before the PTO. The new position would be responsible for preparing and grading the registration examinations, as well as reviewing and preparing these decisions of persons not meeting scientific and technical training requirements. Over the past several years, the number of applicants who have taken the semiannual tests has risen dramatically from 722 in 1986 to 1,263 in 1989, an increase of 75 percent.

The Office of Enrollment and Discipline (OED) also investigates complaints of unethical conduct by persons recognized to practice before the PTO. These investigations take on the average from 6 to 18 months to complete. Presently at least one staff-year of the staff attorneys who investigate these complaints must be devoted to preparing, administering and grading the registration examinations as well as rendering decisions on scientific and technical training requirements of persons seeking admission to the examinations.

If the PTO is to continue to investigate and register new attorneys and agents to practice before the PTO and to reduce the backlog of pending investigations, the increase of one position must be obtained. This function is totally fee supported.

Maintain Personnel Staffing Ratio : (8 permanent positions, 6 FTE, $729,000)
The PTO requests 8 positions, 6 FTE and $729,000 for personnel staffing enhancements. The Office of Personnel cannot keep pace with the demands of servicing the steadily increasing staffing levels of the PTO. The President's Council on Management Improvement recommends a staffing ratio of one personnel official to 60 employees. The personnel office is currently staffed at one personnel official to 67 employees. The population of the PTO is expected to reach a level of 5,017 employees for FY 1991 as a result of the rapid growth in application filings and the passage of the Intent-to-Use legislation.

This initiative also includes funds to broaden the recruitment base in shortage category occupations. It is becoming increasingly difficult to recruit professional employees, i.e. computer specialists, librarians and technical information specialists. This request will enable PTO to recruit in areas outside of Washington, D.C. and to increase advertising in journals and professional magazines.

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Administrative Services......................	Pos./BA	56	$3,096	60	$3,358	4	$262
	FTE	78		81		3	

Essential Program Support: (4 permanent positions, 3 FTE, $262,000)

The PTO requests an increase of four positions, three FTE, and $262,000 to maintain the procurement support service. The workload of the procurement office increased by about 50 percent in FY 1988 due to increasing PTO staff which was driven by increased applications. The Department has also added to the office's workload by requiring tighter reviews, increased oversight, and data systems input.

In addition, the maintenance of the patent pendency reduction goal requires that the award of all contracts and purchase orders is completed within specified time frames. This is crucial in supporting the secretarial goal.

An increase in resources would lead to savings on every contract action because of the ability of each specialist to devote more time to each action and complete thorough business and pricing analyses. Contract closeouts would increase in number which could free up thousands of dollars which have been committed and obligated but not disbursed. Non-tangible benefits would include the ability to maintain procurement processesing goals in light of steadily increasing workloads.

If resources are not allocated, current services will deteriorate and the detailed analysis of contract actions will not occur, which will result in greater government spending and waste.

INCREASES FOR FY 1991
(Obligations in Thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Automation	Pos./BA	223	$23,270	241	$26,126	18	$2,856
	FTE	221		249		28	

Automation (Executive Direction and Administration) -

This increase for the Automation line item is comprised of the following initiatives:

	Permanent Positions	Total FTE	Amount
APS Management and Operations	6	6	($1,093)
Maintain and Secure PTO Archives	0	3	207
T-Search Systems Analysis	2	2	92
Database Integrity	9	16	2,644
Management and Administrative Systems	1	1	1,006
Total	18	28	$2,856

APS Management and Operations (6 permanent positions, 6 FTE, -$1,093)
The PTO requests a net change of six permanent positions, six FTE and -$1,093,000 for APS Management and Operations.

An increase of $346,000 is requested to support six permanent positions and six FTE for the APS Contracts Staff which provides contracting services, support and guidance in all APS contracting efforts. A separate APS contracts staff was recommended by the Department. There are no base funds for this function.

A decrease of $1,439,000 is requested for the Automated Patent System (APS). This decrease reflects the decreased share of the costs of the Automated Patent System in the Automation line item.

Maintain and Secure PTO Archives (3 temporary positions, 3 FTE, $207,000)
The PTO requests an increase of three temporary positions, three FTE and $207,000 to maintain and secure PTO archive records.

Of this amount, $74,000 is requested to hire a contractor to perform required maintenance on the image capture equipment located in the National Underground Storage (NUS) facility in Boyers, Pennsylvania. The existing image capture contract (with CMC) is scheduled to terminate in early 1990. The PTO has purchased the equipment that was installed by CMC. The image scanning capabilities (along with maintenance) are necessary to provide weekly updates to the PTO's Classified Search and Image Retrieval System, to rework images in error, and to capture miscellaneous materials such as non-patent literature. Without a maintenance contract the in-house image capture operation would be brought to a halt as the equipment failed.

This initiative also includes $133,000 to support three temporary positions and three FTE and for additional space at NUS to store magnetic tapes. The staff resources support a second shift in the computer operations. The current tape library in Boyers will reach capacity in FY 1989. The PTO anticipates an increase in the number of orders for magnetic tapes. Without the three positions delays will occur in providing tape copies to customers.

T-Search Systems Analysis (2 permanent positions, 2 FTE, $92,000)
The PTO requests an increase of two permanent positions, two FTE and $92,000 to support the systems analysis for the automated trademark systems. T-Search and TRAM are an integral part of Trademark examination and as such must be updated and enhanced to keep current with changing rules and regulations. The implementation of provisions of the Trademark Law Revision Act also imposed additional requirements on system analysis.

This initiative is fully funded by Trademark user fees.

Database Integrity (9 permanent, 7 temporary positions, 16 FTE, $2,644,000)
The PTO requests an increase of nine permanent positions, seven temporary positions, 16 FTE and $2,644,000 to support the Ongoing Image Capture Project and the optical character recognition conversion contracts, to prepare contracting requirements, to assist and manage daily contracting activities, to handle customer growth, the increased volume of requests and ongoing Trilateral commitments, and to coordinate comprehensive marketing programs for PTO products. This also includes a temporary staff to conduct quality assurance of the image data base and to complete error corrections of the text data base, perform image capture functions at PTO, and to provide clerical services to handle administrative workload.

Management and Administrative Systems (1 permanent position, 1 FTE, $1,006,000)

Of this amount, $331,000 is requested to migrate the PALM system from the current UNISYS/DMS environment to a more advanced data base environment with a fourth generation language, run on an IBM compatible mainframe. The current version of PALM dates back to the early 1980's and has evolved gradually over the intervening years through modification and expansion of the software. The development and implementation of a redesigned PALM system will enable the system to absorb anticipated increases in workload which will stem from projected increases in application filings. If this initiative is not funded, the PTO will accept certain risks associated with the ability of current architecture to absorb substantial increases in future workloads.

This amount also includes $291,000 to establish a network to integrate the various automated systems within the PTO. The PTO presently has a number of independent systems such as APS, T-Search, PALM/TRAM, CCI and the ACIS network. These networks are usually incompatible with one another and involve duplicative cabling to many of the same locations. This initiative will allow the various systems to be interconnected and will reduce the need for duplicative cabling.

This initiative also includes $39,000 for one permanent position and one FTE to provide backup to critical personnel responsible for ACIS budget, APS contract financial management, and the preparation of reports to DOC and external agencies such as OMB and GAO. With the growth in the ACIS programs over the past several years, the complexity of maintaining effective controls has greatly increased.

Finally, this initiative includes an increase of $345,000 to fund cost increases associated with the purchase and installation of Lot B equipment. Lot B equipment is the peripheral equipment necessary for the system users to access and interact with the A-15 mainframe computer.

(Dollars in thousands)

Automation (Executive Direction and Administration)	1991 Base	1991 Estimate	Increase/ (Decrease)
Automated Patent System	$9,163	$7,724	($1,439)

Patent Quality Review: (1 permanent position, 1 FTE, $125,000)
An increase of one position, one FTE and $125,000 is necessary to address the increased workload arising from Patent Examiners' allowances and the resultant increase in the number of cases comprising the four percent sample. The Office of Quality Review reviews the application of substantive statutory criteria for patentability; the adequacy of the examiner search of prior patent or other literature; and the adherence to examining procedures. The Office provides information to managers and examiners on the result of its review and makes recommendations for maintaining or improving the quality of examination. In order to maintain the sampling of four percent, this increase is necessary. This initiative is fully funded by fees.

Space Management............................	Pos./BA	3	$23,477	3	$29,498	0	$6,021
	FTE	3		3		0	

Space Acquisition and Management ($6,021,000):
The PTO requests an increase of $6,021,000 (object class 23.1) for the leasing of additional space in Crystal City, Virginia.

The PTO has outgrown its leased space holdings in the Crystal City complex. The continued growth in the Patent Examining Corps; the pending growth in the Trademark Examination program due to implementation of provisions of the Trademark Law Revision Act of 1988 (intent-to-use); needed expansion for patent and trademark search files; and inadequate training facilities, particularly for the Patent Academy, have all contributed to a very dire need for more space. In 1989, the General Services Administration (GSA) approved the acquisition of 180,000 square feet of office space. An additional 49,000 square feet will be needed in 1991 to provide room for the positions that are being requested in the 1991 budget request. The cost for this additional space will total $6,021,000 in 1991. Failure to acquire this space will prevent the achievement and maintenance of the primary PTO goals as needed staff can not be hired in 1990 or 1991 since space will not be available.

This initiative is fully financed by patent and trademark fees.

Automation Master Plan Summary

The following tables show cost estimates for the Automation Master Plan (1983-1995) in current dollars reflecting anticipated inflation beyond 1991. The Automation Master Plan is currently being revised. Table 1 bridges from the line item format to the three main systems. These systems are defined as follows:

Patent Automation - the automation of patent related activities within the PTO through the implementation of the Automated Patent System (APS). APS includes automation of the patent and trademark databases which include systems for image and text capture. Cost projections represent current cost estimates of the APS contract, as well as cost estimates for APS contract support.

Trademark Automation - automation of trademark searching activities within the PTO through implementation of the Trademark Search System (T-SEARCH) through 1986, and the automation of trademark processing activities within the PTO through TRAM and T-Search from 1987 on.

Management and Administrative Systems - those automation activities which support existing ADP systems and both the patent and trademark automation programs. Included in this category are the automation staff, various support contracts and the existing computer facility and related operations that monitor patent and trademark process flows, and perform accounting and management information functions.

	1995	53,569	3,470	21,120	78,159				

AMOUNTS FOR 1984 INCLUDE A NONRECURRING REDEPLOYMENT OF RESOURCES TO REFLECT ACTUAL APS CONTRACT PROVISIONS.
AMOUNTS FOR 1986 REFLECT A NONRECURRING SEQUESTRATION DUE TO THE BALANCED BUDGET AND EMERGENCY DEFICIT CONTROL ACT OF 1985.
THE REVISED PLAN AMOUNTS INCLUDE PRIOR YEAR UNOBLIGATED BALANCES.

Table 2, which follows, takes the three systems inflated totals from the bottom of Table 1 and divides them into the categories defined as follows:

- Workstations - cost items for the workstation configuration of each of the automated systems. There are four categories of work- stations required to support the automated systems:
    - Full APS (text and image) workstations for examiner search and retrieval;
    - Text search (terminals for examiners) and office automation workstations for management information;
    - Print servers to control printed output from APS;
    - Data capture workstations for control of input to APS.

  The cost includes all associated hardware to support the workstation configuration.

- Other equipment - cost items for system architecture for each of the automated systems. This cost includes all associated hardware except workstations to support full operations of each system not treated as a contractor service.

- Licensed software - cost items for the acquisition, license and development of all software to support the automated systems.

- Contractor services - cost items for software and hardware maintenance, hardware replacement parts, all direct labor and overhead to support system development, software development, acquisition support and general support. This also includes hardware, software and other systems costs where such are imbedded in the cost of a contractor service, as well as costs associated with contractor fee and other administrative costs.

- Staff and support - cost items for the existing ADP system, PTO staff and various contractor support for all automation areas.

AMOUNTS FOR 1986 REFLECT A NONRECURRING SEQUESTRATION DUE TO THE BALANCED BUDGET AND EMERGENCY DEFICIT CONTROL ACT OF 1985.
THE REVISED PLAN AMOUNTS INCLUDE PRIOR YEAR UNOBLIGATED BALANCES AND SURPLUS FUNDS.

PTO-104

Changes for FY 1991 Automation Summary

Automated Patent System (APS)

Funding in FY 1991 for Patent Automation is provided by the following budget activities (dollars in thousands):

Budget Activity:	1991 Base	1991 Estimate	Increase (Decrease)
Patent Process	$11,984	$25,954	$13,970
Information Dissemination	13,147	12,119	(1,028)
Executive Direction and Administration	9,163	7,724	(1,439)
Total	$34,294	$45,797	$11,503

The PTO and the Administration have settled on this level of funding for FY 1991. Under the scenario accompanying this budget request, the following major milestones would be accomplished:

- Decision point for expansion of text search to the Patent Depository Libraries.
- While deployment of classified search and image retrieval to Group 210 will take place in FY 1990, further deployment will not be undertaken until later, pending recompetitions and the loading of the Primary Data Storage Devices (Rapid Access Devices).
- While Group 210 image data will be loaded on primary storage (RAD) in FY 1990, the data load for all remaining U.S. patent images will not be completed until later, and foreign patent availability would not be ready until after 1995.
- Secondary storage (HDD) image data load for U.S. patents will be complete in 1992, while foreign patents will be completed much later.
- Foreign patent image retrieval subsystem will be fully developed about 1994. Data base will be complete after 1995.
- Development of classification/reclassification support begins in 1992 and continues through 1995.
- Capture of missing patents begins in 1990, but is not completed until about 1993.

Trademark Automation

Funding in FY 1991 for Trademark Automation is provided as follows (dollars in thousands):

Budget Activity:	1991 Base	1991 Estimate	Increase (Decrease)
Trademark Process	$1,849	$3,330	$1,481

Major milestones in 1991 for Trademark Automation include:

- Modernization of the T-Search terminal component (hardware and software) to improve system performance.
- System performance enhancements supported by budget request.
- Modification to T-Search system to allow digitized image data to be written to magnetic tape in a standard format so that the images can be sold to the public.

Management and Administrative Systems

Funding in FY 1991 for Management and Administrative Systems is provided by the following budget activities (dollars in thousands):

Budget Activity:	1991 Base	1991 Estimate	Increase (Decrease)
Patent Process	$311	$0	($311)
Information Dissemination	0	342	342
Executive Direction and Administration	14,107	18,402	4,295
Total	$14,418	$18,744	$4,326

Major milestones for Management and Administrative Systems includes:

- Staff increases to provide a separate APS contracts staff, to maintain and secure PTO archives, to support systems analysis for the automated trademark systems, to support database integrity, and to increase administrative and management support.

Revised Automation Master Plan Summary
Actual FY 1989 Summary

The following section is included in response to a directive from the House Committee on Appropriations included in House of Representatives Report No. 98-226 which states:

> "The Committee directs the Patent and Trademark Office to include in each year's budget justification a comparison of the planned costs and benefits and the planned schedule...versus the actual costs, benefits and schedule."

I. Planned versus Actual Costs

The following tables compare plan versus actual obligations for FY 1989 in two ways: by budget activity and by the system categories.

FY 1989 Automation Obligations by Budget Activity
(dollar amounts in thousands)

	Patent Process	Trademark Process	Information Dissemination	Executive Direction and Administration	Total
Budget Plan	$24,977	$2,126	$11,598	$24,485	$63,186
Prior Year Funds	3,453	1,458	898	5,179	10,988
Total Available	28,430	3,584	12,496	29,664	74,174
Actual Obligations	27,786	2,509	12,310	26,503	69,108
Balance	$644	$1,075	$186	$3,161	$5,066

FY 1989 Automation Obligations by Major System Category
(dollar amounts in thousands)

	Automated Patent System	Trademark Automation	Management and Administrative Systems	Total
Budget Plan	$45,995	$2,126	$15,065	$63,186
Prior Year Funds	4,351	1,458	5,179	10,988
Total Available	50,346	3,584	20,244	74,174
Actual Obligations	49,069	2,509	17,530	69,108
Balance	$1,277	$1,075	$2,714	$5,066

Unobligated balances of $5,066,000 in FY 1989 were unavoidable and due primarily to delays in procurement processing.

The following provides more detail on obligations within the major system categories (dollars in thousands):

Automated Patent System: Obligations - $49,069
- The Automated Patent System (APS) prime contract for equipment, software and contractor services - $41,451.
- I.V.&V. activities related to the APS prime contract - $1,251.
- Technical support activities provided by contract - $3,888.
- Costs related to Industry Review Advisory Committee (IRAC) for APS - $7.
- Miscellaneous costs related to system management and support - $2,472.

Trademark Automation: Obligations - $2,509
- T-Search contract for lease and maintenance of equipment and software for T-Search System - $759.
- Trademark share of rental and maintenance of current systems for TRAM - $1,309.
- Trademark share of the Lot B peripheral equipment - $322.
- Other miscellaneous expenses - $119.

Management and Administrative Systems: Obligations - $17,530
- Compensation and benefits for Office of Information Systems staff - $9,580.
- Rental and maintenance for non-Trademark portion of current systems - $1,762.
- Supplies and miscellaneous equipment for current systems - $2,625.
- Support contracts for current systems - $1,539.
- Travel, shipping and printing - $113.
- Miscellaneous rentals, supplies and equipment - $141.
- Miscellaneous services and maintenance - $757.
- Miscellaneous general expenses - $1,013.

II. Actual Automation Cost Savings

A summary of costs savings realized in the PTO budget thru FY 1991 include:

Fiscal Year	Line Item	Description	Base Reduction
1986	Trademark Printing	In-house photocomposition	($731,000)
1987	Examination-Professional (Patent Process)	Meade data base reduction	($612,000)
1988	Examination of Trademarks	General savings from automation of Trademark Process	($68,000)

III. Schedule of Major Automation Events for FY 1989 through FY 1991

Automated Patent System (APS)-Includes Data Base Auto.	1990 Congressional Schedule	1991 Congressional Schedule	Comments:
Full Text Search			
Extend text search by completing installation of additional text terminals if needed	3rd Qtr/1989	3rd Qtr/1989	Completed
Expanded U.S. Patent text data base available	3rd Qtr/1989	4th Qtr/1990	Revised Schedule due to complications in data conversion and delays in acquiring data storage
Complete public search room capability	2nd Qtr/1990	3rd Qtr/1989	Initial Capability Completed
U.S. Patent Backfile Image Capture			
Complete capture of full backfile of U.S. Patent images	4th Qtr/1989	4th Qtr/1989	Initial Capability Completed
Classified Search and Image Retrieval			
Complete evaluation of the effectiveness of electronic searching of classified image files and the electronic searching of text and image files together and the effect of electronic searching on examiner performance and productivity.	1st Qtr/1989	1st Qtr/1989	Completed
Successful completion of stability test period	1st Qtr/1989	1st Qtr/1989	Completed

Automated Patent System (APS)-Includes Data Base Auto.	1990 Congressional Schedule	1991 Congressional Schedule	Comments:
Deployment decision for second testbed examining group	3rd Qtr/1989	4th Qtr/1989	Completed
Analysis of review panel recommendations completed	4th Qtr/1989	4th Qtr/1989	Completed
Ergonomic and performance enhancements installed and tested	4th Qtr/1989	3rd Qtr/1990	Revised Schedule due to protracted four-party negotiation for an acceptable workstation
Complete loading of 150 dpi image data base for second examining group	N/A	3rd Qtr/1990	New Milestone
Extend APS image search and retrieval to second examining group	N/A	3rd Qtr/1990	New Milestone
Begin load of complete U.S. file of patent images to high density storage devices	N/A	1st Qtr/1991	New Milestone
Office Automation			
Complete deployment of office automation capabilities to all PTO managers	4th Qtr/1989	N/A	Deferred per IRAC Recommendation

Trademark Automation (TRAM, T-Search)	1990 Congressional Schedule	1991 Congressional Schedule	Comments:
Text Editing - I			
Implement Text Editing - I capability	3rd Qtr/1989	2nd Qtr/1990	Revised Schedule due to delayed Lot B installation
Applicant and Registrant Index			
Complete implementation of index to allow applicant and registrant ownership information to be retrieved on-line	3rd Qtr/1990	N/A	Deferred Beyond FY 1991

Trademark Automation (TRAM, T-Search)	1990 Congressional Schedule	1991 Congressional Schedule	Comments:
Data Base Administration			
Implement capability of automated procedure to ensure that Trademark data meets high standards of accuracy and completeness	3rd Qtr/1989	2nd Qtr/1990	Revised Schedule due to higher priority of ITU implementation
Electronic Voice Box			
Implement electronic voice box capabilities	4th Qtr/1989	2nd Qtr/1990	Revised Schedule due to vocabulary changes
Assignment System			
Implement new assignments capability	1st Qtr/1990	4th Qtr/1991	Revised Schedule due to delay in documentation of user requirements
Intent-to-Use Legislation			
Implement revisions consistent with ITU legislation of 1988	1st Qtr/1990	1st Qtr/1990	Completed
Adversary Proceedings Index			
Implement new adversary proceedings index capability	3rd Qtr/1990	N/A	Deferred Beyond FY 1991
Trial and Appeal Board Administration			
Implement new TTAB administration capabilities	4th Qtr/1990	N/A	Deferred Beyond FY 1991
Develop functional requirements document for 2nd generation Automated Trademark Systems	N/A	4th Qtr/1990	New Milestone
Creation of text CD ROM file	N/A	1st Qtr/1991	New Milestone

Management and Administrative Systems (MAS)	1990 Congressional Schedule	1991 Congressional Schedule	Comments:
Current Network Equipment Replacement Award contract	3rd Qtr/1989	4th Qtr/1989	Completed
Install Equipment	4th Qtr/1989	2nd Qtr/1990	Revised Schedule due primarily in contract award delay

Activity: Offsetting Fee Collections

Goal:

To offset by user fee collections portions of the processing c sts of the Patent and Trademark Office in order to support the main Department subgoals and PTO objectives:

- Maintain patent pendency at 18 months and improve patent qua ity.
- Automate the patent and trademark processes.
- Maintain trademark pendency at three months to first action or all cases and thirteen months to disposal for use cases with timely disposal of all others and improve trademark quality.
- Strengthen worldwide protection of intellectual property.

Objective:

To utilize fee collections to maintain reduced patent pendency maintain trademark pendency and improve public services.

Base Program

The Patent and Trademark Office charges fees for processing patents and trademarks and for providing services related to the processing of patents and trademarks in accordance with the provisions of Public Law 96-517, Public Law 97-247, Public Law 99-607, and Public Law 100-703. The principal features of these Acts are:

1. Establishment of statutory fees for patents (Section 41(a) and Section 41(b) of title 35, United States Code), and authorization to adjust these fees every three years to reflect fluctuations in the Consumer Price Index (CPI) during the previous three year period.
2. Establishment of trademark fees by the Commissioner under Section 31 of the Trademark Act of 1946 (15 U.S.C. 1113), and authorization to adjust these fees in the aggregate every three years to reflect fluctuations in the Consumer Price Index (CPI) during the previous three year period.
3. Establishment of service fees by the Commissioner under Section 41(d) of title 35, United States Code, and authorization to adjust these fees in the aggregate every three years to reflect fluctuations in the Consumer Price Index (CPI) during the previous three year period.
4. Reduction by 50 percent of the patent processing fees (Section 41(a) and 41(b)) charged to independent inventors, small businesses, and nonprofit organizations (e.g., universities).
5. Prohibition against using trademark fee revenues other than for the processing of trademark registrations and for other services and materials related to trademarks (Section 42(c) of title 35, United States Code).
6. Restriction of the amount of fees used to finance automatic data processing activities to 30%, (i.e, 70% of the costs of automation must come from appropriated funds).
7. Prohibition against using fee revenues to finance the costs of public patent and trademark search rooms and libraries.
8. Authorization to establish fees for automated patent and trademark search systems.
9. Authorization to use appropriated or apportioned fee revenues for any PTO operations or activities, except for the prohibitions and restrictions mentioned above.
10. Along with the submission of the annual PTO budget, the Secretary of Commerce shall provide to the Committees on the Judiciary:
    (a) a list of patent and trademark fee collections received during the previous fiscal year;
    (b) a list of PTO activities during the preceding fiscal year which were supported by fee expenditures and by appropriations;
    (c) budget plans for significant PTO programs, projects and activities including outyear estimates;
    (d) any proposed disposition of surplus fees by the PTO; and
    (e) any other information considered necessary by the Committees.

Patent and trademark fee collections are distributed to PTO budget line items. It should be noted that this distribution does not represent fees "collected" by the line item. Specific fees generally cannot be credited to a particular line item since many line items contribute effort necessary to accomplish the task for which the fee is paid. Therefore, no cost center or budget line item has an irrevocable claim to a particular fee. Fees are distributed to PTO budget line items primarily for budget presentation purposes. Fees are collected by function as shown on the following page.

Since the fee legislation (Section 42(c) of title 35, United States Code), restricts the use of trademark fees to the financing of trademark costs, the PTO must maintain separate accounts for patent and trademark fee collections. Patent and trademark fee collections for 1989 through 1991 are shown in the following table:

Summary of Workload and Performance
(Dollar amounts in thousands)

	1989 Actual Amount	1990 Currently Available Amount	1991 Base Amount	1991 Estimate Amount	Increase/ (Decrease) Amount

INCREASES FOR FY 1991
(Obligations in Thousands)

	1991 Base	1991 Estimate	Increase (Decrease)
Offsetting Fee Collections....................	$193,521	$241,620	$48,099

The offsetting fee estimates shown in this request reflect the portion of PTO program costs required to be funded by fee collections. Fees were revised on April 17, 1989 for the fiscal year 1989 - 1991 fee cycle. The 1991 estimate assumes the following:

1. Patent fees (Section 41(a) and Section 41(b)) were adjusted by a factor of 10.3 percent, equal to the change in the Consumer Price Index for the prior three year (1986-1988) period. Workloads have been adjusted to: (1) reflect the receipt of growing numbers of patent applications; (2) patent issues projected in the 1991 patent production model; (3) patent maintenance fees as reflected by current renewal rates, and (4) attendant fees as growing in proportion to patent applications and issues.

2. Patent service fees authorized under Section 41(d) were adjusted in the aggregate by a factor of 10.3 percent, equal to the change in the CPI for the prior three year (1986-1988) period.

3. Patent Cooperation Treaty (PCT) fees authorized under Section 376 of title 35, United States Code were adjusted by an amount to recover the costs of the program. Workloads have been increased consistent with projected PCT applications.

4. Trademark fees were reduced in two areas. The trademark application filing fee was reduced from $200 to $175, and the trademark assignment fee was reduced from $100 to $8. The 1991 estimate includes new fees to implement the intent-to-use provisions of the Trademark Law Revision Act of 1988.

CONSULTING AND RELATED SERVICES
(Obligations in thousands of dollars)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting Services	...	$10	$10
Management and professional services	$43	30	30
Special studies and analyses	...	15	15
Management and support services for research and development	...	...	...
Total	$43	$55	$55

No consulting services were acquired by the Patent and Trademark Office during FY 1989.

Management and professional services were acquired during FY 1989 from:

- Professional arbitrators for employee union hearings ($36,000)
- Independent contractors (court reporters) provided professional services. ($16,500)

Funding for consulting and related services in 1990 and 1991 will provide support to the PTO in its efforts to reduce pendency times, to improve the quality of its products and services, to automate office processes, and to protect and promote U.S. intellectual property rights abroad.

Mr. Early. Here to testify is the Acting Assistant Commissioner for Patents and Trademarks, Jeffrey Samuels. Since this is your first appearance before the subcommittee, we will insert your biographic sketch into the record at this point, and then you may proceed with your statement however you want.

[The biography of Mr. Samuels follows:]

Biography of Jeffrey M. Samuels, Assistant Commissioner for Trademarks, Patent and Trademark Office

Jeffrey M. Samuels became Assistant Commissioner for Trademarks on November 9, 1987. He is responsible for the administration of the trademark programs in the U.S. Patent and Trademark Office.

Mr. Samuels was employed from 1976 to 1987 by The Bureau of National Affairs, Inc., a Washington, D.C.-based publisher of information services. From 1976 to May 1982, Mr. Samuels was a legal editor on the staff of "BNA's Patent, Trademark & Copyright Journal." From May 1982 to November 1987, Mr. Samuels served as managing editor of the publication. While at BNA, Mr. Samuels also organized and moderated a number of conferences in the intellectual property law field. He has authored several articles relating to intellectual property law developments and served as editor of the publication "Patent, Trademark and Copyright Laws." Before leaving BNA, Mr. Samuels helped launch a new publication covering worldwide developments in the intellectual property field.

Mr. Samuels graduated from Colgate University (B.A. 1972) and Albany Law School (J.D. 1975). He is a member of the New York, Virginia, and District of Columbia bars. He is also a member of the American Bar Association's Section of Patent, Trademark and Copyright Law, the American Intellectual Property Law Association, and the District of Columbia Bar Association's Section on Patent, Trademark and Copyright Law and the Section on Computer Law.

Mr. Samuels is married to the former Linda Bartman and has two children, Joanna and Eric. He resides in Fairfax, Virginia.

Mr. Samuels. Thank you, Mr. Chairman.

I appreciate the opportunity to present the President's request for appropriations for the Patent and Trademark Office for fiscal year 1991. With me is the PTO's Assistant Commissioner for Finance and Planning, Brad Huther.

The PTO's fundamental mission is to administer the laws relating to patents and trademarks in order to promote industrial and technological progress in the United States and strengthen the national economy. This mission is accomplished by examining patent and trademark applications, issuing patents and registering trademarks, disseminating patent and trademark information to the public and encouraging a domestic and international climate in which intellectual property can flourish.

We intend to fulfill our mission through the following four point program; to maintain the average time it takes to get a patent at 18 months; to maintain the "3/13" trademark pendency goal for a "use-based application," and to achieve timely disposal of applications filed under the "intent-to-use" provisions of the Trademark Law Revision Act of 1988; third, to automate the operations of the Patent and Trademark Office by the 1990s, and fourth, to strengthen the worldwide protection of intellectual property.

These program goals are supported by the Patent and Trademark Office's fiscal year 1991 request of $353,647,000, and 4,765 positions, an increase of $77,770,000 and 867 positions above the fiscal year 1990 program level. Because offsetting collections are projected to total $241,620,000, our budget authority request of $112,027,000 represents less than 32 percent of our operating costs.

This committee is aware that the PTO has been responding to the public's need for better services. As we prepare to celebrate later this year the bicentennial of the signing of the first patent law, the 1980s will be remembered as a period of significant improvements in the quality and timeliness of issued patents and trademarks.

During the past decade, we achieved major reductions in patent and trademark processing time. We launched an ambitious but critically important automation program and we strengthened intellectual property protection worldwide. To achieve these objectives, we relied on an effective short term planning process using the annual budget review as the driving factor. That process has served us well, but we now are facing unprecedented challenges in the 1990s.

Application filings are already at an all-time high and growing. Complex demographic changes are occurring in our society that will profoundly affect our ability to attract and retain new employees. Automation is expected to cause far-reaching changes in the PTO's operating environment, some of which are already taking place in the trademark operation.

Accordingly our planning process is being refocused in order to link short term operational priorities with our long range strategic directions, while at the same time holding costs down. We continue to see dramatic growth in the number of patent applications being filed in the Office. Last year, we had predicted application filings for fiscal year 1990 and 1991 to reach 140,000 and 144,000, respectively, but we now expect those levels will be surpassed by about 19 percent for a two year total of 55,000 additional cases above plan.

Because every group of 13,000 cases roughly translates into a one month pendency burden, this added work load is especially significant. These trends indicate that by the mid-1990s, patent application filings will approach 250,000, which is roughly two-and-one-half times the filing rate of the early 1980s.

In order to address this phenomenal increase in workload, we plan to continue our aggressive recruitment efforts, but we also are seeking new and innovative strategies to increase production capacity, such as instituting a productivity gain sharing program and taking steps to ensure longer retention of qualified employees.

We believe we must find ways of reducing learning curves and eliminating labor intensive operations wherever possible. We are committed to balancing this effort with aggressive steps to improve patent quality. Specifically, we have implemented a Quality Reinforcement Program throughout our patent examining operation. This program has improved the overall completeness of the patented files, so that patents issued, if challenged in court, are more likely to be found valid.

In the critically important biotechnology discipline, we have worked hard to build a cadre of well-qualified examiners, and to supply them with personal computers, access to commercial databases and other tools to search and examine this rapidly expanding field of technology.

Turning to trademarks, since 1985, we have successfully maintained the trademark pendency goal of three months to first action and 13 months to registration. Our goal for the 1990s is to maintain the "3/13" pendency goal for all filings under standard use provisions with timely disposal of all applications filed under the "intent-to-use" provisions of the Trademark Law and Revision Act of 1988, which was implemented this past November.

This legislation is expected to increase trademark application filings to a level of 135,000 by 1995, a rate of increase equally as dramatic as patents. Our strategy in trademarks is to continue hiring staff to accommodate the increased workload while implementing new initiatives to enhance the quality of trademark registrations.

For example, we are developing new requirements which are designed to make our automated trademark systems more efficient and responsive, and we have implemented a new Office of Trademark Quality Review. Last year, Mr. Chairman, we had informed you that we had successfully implemented a number of substantive recommendations given to us by an Industry Review Panel on the Automated Patent System (APS).

As a result of the panel's recommendations and the recommendations of its successor, the Industry Review Advisory Committee, the PTO has adopted an evolutionary approach to system development, and we are now ready to begin the gradual deployment of APS to a second patent examining group.

APS full-text searching is fully operational in all 16 patent examining groups and in our public search room. We are exploring ways to enhance the public's use of other features of APS, and are considering other alternatives to disseminate our information more conveniently via the use of CD-ROM technology.

Mr. Early. What is that CD-ROM?

Mr. Samuels. It is disks, optical disks, that information is put upon, and we have been sending information in that form to our patent depository libraries now for several years.

The Automated Trademark System continues to be an effective tool in increasing the quality of the decisions rendered by our trademark examining attorneys. This system has also been offered to the public at our facilities in Arlington, Virginia. We look forward to sending the fourth edition of our Automation Master Plan to the Committee later this Spring.

Effective intellectual property protection is an increasingly important factor for U.S. businesses competing in the world market. Multilaterally, the PTO is assisting the U.S. Trade Representative (USTR) in advocating the establishment of minimum standards of protection and enforcement of intellectual property rights within the framework of the General Agreement on Tariffs and Trade.

We are working with U.S. industry in the World Intellectual Property Organization to achieve an acceptable harmonization of patent laws. Bilaterally, we are emphasizing negotiations to strengthen intellectual property laws in developing countries, and more recently the countries of Eastern Europe. We are continuing training and assistance programs in the United States and abroad for nationals from developing countries including China, Korea, Taiwan, Saudi Arabia and Tanzania.

Also, the office will continue to work with the U.S. Trade Representative in implementation of the "special 301" provisions of the 1988 amendments to the Trade Act. The budget request for fiscal year 1991 reflects the administration's continued commitment to achieve our major goals: A net increase of 590 permanent positions and $29,219,000 is requested to maintain the 18 month average patent pendency period and to enhance patent quality. Provision of office automation capabilities is proposed for the Patent Examining Corps for $1,939,000, to be offset by savings related to the elimination of clerical typing positions. An increase of 95 permanent positions and $5,428,000 is requested to address the higher workload and information dissemination activities, as well as to improve patent search file integrity and examiner search services. Enhanced services supportive of patent examination require an increase of 14 permanent positions and $7,209,000 to address higher levels of applicant requests to practice before the PTO; to enhance personnel services to keep pace with increasing staff; to provide procurement services; to maintain the Patent Quality Review program, and to pay for our additional space requirements for the expanding work force.

An increase of 126 positions and $3,632,000 is requested to address higher trademark workloads to maintain the reduced pendency goals and improve trademark quality. These enhancements are totally supported by trademark user fees.

An increase of $17,310,000 and 18 permanent positions is requested for our automation programs, of which $11,503,000 is for the next phase of development and deployment of the Automated Patent System.

As a final note, Mr. Chairman, fiscal year 1991 marks the end of the PTO's current three year authorization cycle, during which we will have collected approximately $614,000,000 in user fees. Given that the increased costs of processing the additional patent workload in fiscal year 1990 and 1991 must be paid for from both current and projected revenues, the bottom line is that we expect to have little, if any, flexibility in our non-trademark fee accounts during the next two years. Mr. Chairman, this concludes my statement. I will be pleased to respond to any questions you may have.

[The statement of Mr. Samuels follows:]

STATEMENT BY
ACTING COMMISSIONER OF PATENTS AND TRADEMARKS
JEFFREY M. SAMUELS
SUBCOMMITTEE ON COMMERCE, JUSTICE, STATE, THE JUDICIARY AND RELATED AGENCIES
COMMITTEE ON APPROPRIATIONS
HOUSE OF REPRESENTATIVES
FEBRUARY 28, 1990

Mr. Chairman and Members of the Committee:

I appreciate the opportunity to present the President's request for appropriations for the Patent and Trademark Office (PTO) for fiscal year 1991. With me is the PTO's Assistant Commissioner for Finance and Planning, Brad Huther.

FY 1991 REQUEST LEVEL

The PTO's fundamental mission is to administer the laws relating to patents and trademarks in order to promote industrial and technological progress in the U.S. and strengthen the national economy. This mission is accomplished by:

(1) examining patent and trademark applications, issuing patents and registering trademarks;

(2) disseminating patent and trademark information to the public; and

(3) encouraging a domestic and international climate in which intellectual property can flourish.

We intend to fulfill our mission through the following four-point program:

(1) to maintain the average time it takes to get a patent at 18 months;

(2) to maintain the "3/13" trademark pendency goal and to achieve timely disposal of applications filed under the intent-to-use provisions of the Trademark Law Revision Act of 1988;

(3) to automate the operations of the Patent and Trademark Office by the 1990's, and

(4) to strengthen the worldwide protection of intellectual property.

These program goals are supported in the Patent and Trademark Office's FY 1991 request of $353,647,000 and 4,765 positions, an increase of $77,770,000 and 867 positions above the FY 1990 program level. Because offsetting collections are projected to total $241,620,000, our budget authority request of $112,027,000 represents less than 32 percent of our operating costs.

PLANNING FACTORS

This Committee is aware that the PTO has been responding to the public's need for better services. As we prepare to celebrate later this year the bicentennial of the signing of the first patent law, the 1980's will be remembered as a period of significant improvements in the quality and timeliness of issued patents and trademarks. During the past decade we achieved major reductions in patent and trademark processing time, we launched an ambitious but critically important automation program and we strengthened intellectual property protection worldwide.

To achieve these objectives, we relied on an effective short-term planning process using the annual budget review as the driving factor. That process has served us well, but we now are facing unprecedented challenges in the 1990's: application filings are already at an all-time high and growing; complex demographic changes are occurring in our society that will profoundly affect our ability to attract and retain new employees; and automation is expected to cause far-reaching changes in the PTO's operating environment, some of which are already taking place in the trademark operation. Accordingly, our planning process is being refocused in order to link short-term operational priorities with our long-range strategic directions, while at the same time holding costs down.

We continue to see dramatic growth in the number of patent applications being filed with the Office. Last year, we had predicted application filings for FY 1990 and FY 1991 to reach 140,000 and 144,000, respectively, but we now expect those levels will be surpassed by about 19 percent, for a two-year total of 55,000 additional cases above plan. Because every group of 13,000 cases roughly translates into a one-month pendency burden, this added workload is especially significant. These trends indicate that by the mid-1990's patent application filings will approach 250,000, which is roughly two and one half times the filing rate of the early 1980's.

In order to address this phenomenal increase in workload, we plan to continue our aggressive recruitment efforts, but we also are seeking new and innovative strategies to increase production capacity, such as instituting a productivity gainsharing program and taking steps to ensure longer retention of qualified employees. We believe we must find ways of reducing learning curves and eliminating labor-intensive operations wherever possible. We are committed to balancing this effort with aggressive steps to improve patent quality. Specifically, we have implemented a Quality Reinforcement Program throughout our patent examining operation. This program has improved the overall completeness of the patented files so that the patents issued, if challenged in court, are more likely to be found valid. In the critically important biotechnology discipline, we have worked hard to build a cadre of well-qualified examiners and to supply them with personal computers, access to commercial data bases and other tools to search and examine this rapidly expanding field of technology.

Turning to trademarks, since 1985 we have successfully maintained the trademark pendency goal of three months to first action and 13 months to registration. Our goal for the 1990's is to maintain the "3/13" pendency goal for all filings under standard "use" provisions with timely disposal of all applications filed under the "intent-to-use" provisions of the Trademark Law Revision Act of 1988, which was implemented this past November. This legislation is expected to increase trademark application filings to a level of 135,000 by 1995--a rate of increase equally as dramatic as patents. Our strategy in trademarks is to continue hiring staff to accommodate the increased workload while implementing new initiatives to enhance the quality of trademark registrations. For example, we are developing new requirements which are designed to make our automated trademark systems more efficient and responsive, and we have implemented a new office of Trademark Quality Review.

Last year we informed you that we had successfully implemented a number of substantive recommendations given to us by an Industry Review Panel on the Automated Patent System (APS). As a result of the Panel's recommendations and the recommendations of its successor, the Industry Review Advisory Committee, the PTO has adopted an evolutionary approach and we are now ready to begin the gradual deployment of APS to a second patent examining group. APS Full Text Searching is fully operational in all 16 patent examining groups and in our Public Search Room. We are exploring ways to enhance the public's use of other features of APS and are considering other alternatives to disseminate our information more conveniently via the use of CD-ROM technology. The Automated Trademark System continues to be an effective tool in increasing the quality of the decisions rendered by our Trademark Examining Attorneys. This system has also been offered to the public at our facilities in Arlington, Virginia. We look forward to sending the fourth edition of our Automation Master Plan to the Committee later this Spring.

Effective intellectual property protection is an increasingly important factor for U.S. businesses competing in the world market. Multilaterally, the PTO is assisting the U.S. Trade Representative (USTR) in advocating the establishment of standards for protection and enforcement of intellectual property rights within the framework of the General Agreement on Tariffs and Trade (GATT). We are working with U.S. industry in the World Intellectual Property Organization to achieve an acceptable harmonization of patent laws. Bilaterally, we are emphasizing negotiations to strengthen intellectual property laws in developing countries and more recently, the countries of Eastern Europe. We are continuing training and assistance programs in the U.S. and abroad for nationals from developing countries including China, Korea, Taiwan, Saudi Arabia, and Tanzania. Also, the Office will continue to work with the U.S. Trade Representative in implementation of the "special 301" provisions of the 1988 amendments to the Trade Act.

FY 1991 SPECIFIC REQUESTS

The budget request for FY 1991 reflects the Administration's continued commitment to achieve our major goals:

- A net increase of 590 permanent positions and $29,219,000 is requested to maintain the 18 month average patent pendency period and to enhance patent quality. Provision of office automation capabilities is proposed for the Patent Examining Corps for $1,939,000, to be offset by savings related to the elimination of clerical typing positions. An increase of 95 permanent positions and $5,428,000 is requested to address the higher workload in information dissemination activities, as well as to improve patent search file integrity and examiner search services. Enhanced services supportive of patent examination require an increase of 14 permanent positions and $7,209,000 to address higher levels of applicant requests to practice before the PTO; to enhance personnel services to keep pace with increasing staff; to provide procurement services; to maintain the patent quality review program, and to pay for our additional space requirements for the expanding workforce.

- An increase of 126 positions and $3,632,000 is requested to address higher trademark workloads, to maintain the reduced pendency goals and improve trademark quality. These enhancements are totally supported by trademark user fees.

- An increase of $17,310,000 and 18 permanent positions is requested for our automation programs, of which $11,503,000 is for the next phase of development and deployment of the Automated Patent System.

As a final note, FY 1991 marks the end of the PTO's current three-year authorization cycle during which we will have collected approximately $614,000,000 in user fees. Given that the increased costs of processing the additional patent workload in FY 1990 and FY 1991 must be paid for from current and projected revenues, the bottom line is that we expect to have little if any flexibility in our non-trademark fee accounts during the next two years.

Mr. Chairman this concludes my statement. I will be pleased to respond to any questions you may have.

STATUS OF COMMISSIONER

Mr. **Early**. What is the status of—you are acting?

Mr. **Samuels**. I am the Acting Commissioner of Patents and Trademarks at this time.

Mr. **Early**. And has the President selected a——

Mr. **Samuels**. Yes, he has. The President, in October, announced his intention to nominate Harry Manbeck to be the next commissioner. Just yesterday, Mr. Chairman, the confirmation hearings for Mr. Manbeck's appointment were held, and it is anticipated that he would be confirmed and in place sometime next month.

Mr. **Early**. Fine. Is he a career man?

Mr. **Samuels**. No. He has spent his entire career with the General Electric Company. He has been their General Patent Counsel for about the last 20 years.

FLEXIBILITY IN PTO OPERATIONS

Mr. **Early**. Mr. Samuels, that last statement in your written testimony really disturbs me. Given that the increased cost of processing the additional patent work load in fiscal year 1990 and 1991 must be paid from current and projected revenues, the bottom line is that we have—we expect to have—little, if any, flexibility in our non-trademark fee accounts during the next two years.

That is not a healthy thing, is it? Or is it?

Mr. **Samuels**. Well I agree with you, Mr. Early. It is not healthy or desirable. It is dictated, though, by a number of factors.

Mr. **Early**. What are they?

Mr. **Samuels**. I guess the two main factors I would point to was the decision of Congress last year to require us to spend earlier than we anticipated some $12 million in surplus fees in order to cover a $12 million reduction in our budget authority. In addition, we do not have authority under our authorization legislation to increase our patent and trademark fees until fiscal year 1992. In other words, in our current authorization bill which covers us for the fiscal years 1989 to 1991, we are locked into the fees that went into effect last April, and we cannot adjust them until the conclusion of that fee cycle.

Mr. **Early**. For the record, will you provide, in your professional opinion, what if anything we could do to address that, that would also include that situation?

[The information follows:]

Flexibility in PTO Operations

The user fees which the PTO collects are advanced payments for services to be provided later. As such, excess fee collections in any year represent a double-edged sword. On the positive side, PTO has more fee revenues than planned for the current year. On the negative side, PTO workload and costs for the next year will be higher than planned. Prior to FY 1989, excess fee collections were primarily carried forward into the next year. Starting with FY 1989, the PTO is requesting to use excess fee collections in the year they are collected to address the higher workloads more promptly. If our current projections are correct, all non-Trademark excess fee collections will be used in FY 1990. Hence there will be little or no surplus carried forward, which will reduce PTO's flexibility in FY 1991.

When the Congress requires the PTO to use excess fee collections to offset budget authority, our ability to provide timely service with high quality is compromised. Sequestration of user fees would also fall into this category. Under current legislation, the budget authority needed for PTO operations would drop to 20% of total costs by 1995. By enacting our budgets as planned, savings in budget authority would continue to be realized. Further changes in legislation to this effect would enable PTO to use fees to offset costs which currently must be paid by budget authority.

OMB BUDGET CUTS

Mr. EARLY. Now what was your budget request to OMB, and what items did OMB eliminate from the request and what will be the impact of these reductions on the operation of the Patent Office?

Mr. SAMUELS. For the most part, Mr. Chairman, our budget request to OMB is one which we are presenting to Congress today. OMB and the Department made very minor changes, and they were primarily in the automation area, reducing our request for such things as greater security, more staff to handle procurements, things of that nature.

But I could say truthfully that we received probably 99.9 percent of everything that we requested.

Mr. EARLY. Well, why don't you provide for the record even the small reductions, especially in automation. I cannot understand that. Why should they reduce your budget when you are bringing in more money than you are spending?

Mr. SAMUELS. I think it was a feeling on the part of both the Department and OMB that these requests that they cut were "overhead" which we could meet through adjustments in our own personnel within the office.

Mr. EARLY. Some bureaucrats think that any time they scrutinize the budget, if they do not make a change, management will not know that they changed anything. I want to know why they cut anything, and specifically I want to know what the automation cuts are.

Mr. SAMUELS. We will respond to that, Mr. Chairman.

[The information follows:]

ADMINISTRATION CUTS

The budget review process through the Department of Commerce and OMB resulted in the following changes to our budget request for FY 1991:

Program level

	($000's)
Request to Department	$354,064
Request to OMB	354,309
Request to Congress	353,647

As the numbers indicate, there were some pluses and minuses, but the net effect was to grant nearly all of the PTO's original request.

The Office of Management and Budget reduced the 1991 budget request of the PTO by $862,000. The reductions are the net of inflationary adjustment reductions (−$2,034,000), management savings (−$1,808,000), and funds for the pending 1991 pay raise (+$2,980,000). There were no reductions to the automation programs of the PTO nor to the PTO automation initiatives for 1991.

FY 1990 BUDGET REDUCTIONS

Mr. EARLY. Now how much of your 1990 appropriation was sequestered, and what was the impact of this reduction on the operation of the office?

Patent and Trademark Office
Salaries and Expenses

PERIODICALS, PAMPHLETS AND AUDIOVISUAL PRODUCTS

(Obligations in thousands of dollars)

	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Periodicals	$73	$48	$69	$74
Pamphlets	29	41	44	47
Audiovisuals	6	5	7	7
Total	$108	$94	$120	$128

Narrative Statement

Technical literature documents in the form of periodicals and pamphlets are essential in the patent and trademark examination process. The printing costs are reflected above. The requirement for technical literature documents is directly proportional to the workload and resultant production in patent and trademark examination activities. The use of audiovisuals is primarily for PTO's National Inventors Day program.

Mr. **Samuels**. Well we had a total BA reduction of approximately $16 million; $4 million was an across the board reduction, BA, and $12 million was to be made up from surplus fees which I alluded to earlier; so we had a total reduction of $16 million. That was the amount of the Congressional cut to our budget request. It reduced our appropriation below the Gramm-Rudman baseline so that there was no BA sequester. However, our fees were sequestered by $2,520,000.

Mr. **Early**. In your professional opinion, do we often spend money to save money? You are bringing in three dollars for every dollar you spend, according to your statement—and that is accurate, is it not?

Mr. **Samuels**. We are bringing in three dollars for every dollar that we spend? I am not sure I follow that.

Mr. **Early**. Offsetting collections are projected to total $241 million, and the budget authority request was $112 million, so you are really bringing at least two to one.

Mr. **Samuels**. Right. Sixty-eight percent of our total operating costs are covered by fees, right.

Mr. **Early**. Would those reductions, in your professional opinion, reduce what you might have done in fees?

Mr. **Samuels**. Well during this year, Mr. Chairman, I think that we were able to cover those reductions because fortunately we had surplus fees that we could draw upon. But the point that I was making at the conclusion of my testimony is that that flexibility is now gone, and we do not have those reserves to draw upon in the near future.

So while it did not hurt us near-term, in the long term, it will hurt us. And it also, if I may make a comment, Mr. Chairman, since part of the money that was taken from us was the fees, in my view, this really represents a breach of the commitment that we made to our user communities, the patent and trademark applicants, the people who pay these fees, back in the early '80s, when we significantly increased all of our patent and trademark fees. What we told our user community was that you agree to pay these higher fees and we will provide you with more prompt and higher quality examination. And now to see these fees being taken for purposes totally unrelated to the proposes of the Patent and Trademark Office is obviously disturbing, not only to us, but I think to our user communities as well.

PATENT PENDENCY

Mr. **Early**. I am fairly impressed with you and your group, but I have trouble with your statement where you say you maintain the average time at 18 months. Are you telling the committee that this past year the time for patent pendency was 18 months?

Mr. **Samuels**. The average pendency time for the examination of all the patent applications was down to 18 months on September 30, 1989.

Mr. **Early**. Do you think this budget is going to let you—with those other stats you gave us, with the increased workload—I do not see the relative increases in personnel and budget. Do you think you are going to maintain that? You say it is a goal to maintain it. Do you think you will achieve that goal with this budget?

Mr. **Samuels**. Yes, Mr. Chairman. If we get the amount of money that we have requested, we believe that we will maintain the 18 month pendency. The request includes hiring an additional 375 patent examiners, hiring additional clerical support for those examiners. And we think that if we get these resources, that we will make 18 months.

I might add, Mr. Chairman, that the 18 month goal was a goal of the office for about eight or ten years.

Mr. **Early**. For a long time.

Mr. **Samuels**. And now that we have made it, we do not want to slip back to what the situation was in the early '80s, when pendency was in the mid-20s, and projections showed us going to four year pendency. There is a lot of hard work and effort by the PTO management and obviously by our patent examiners, and a lot of extraordinary efforts undertaken in order to make this 18 month pendency goal.

And it is certainly our intent and we expect to maintain that goal in the future years, and this budget will permit us to do it, at least in 1991.

AUTOMATION SCHEDULE

Mr. **Early**. My reservations are on the automation, Mr. Samuels. I just think we are not being progressive if we do not do everything in that particular respect. And then in your statement on page 27 of the budget justification is listed a request for an increase of approximately $14 million for the automated patent system.

Is that going to keep you on schedule for the three year plan you mentioned in your statement?

Mr. **Samuels**. Well, we will have the fourth edition of our Automation Master Plan to this Committee sometime this Spring. The increase, we are asking for is a net total increase in the automation budget of $17 million, the vast majority of which will be for the use of the Automated Patent System. And this would permit us to continue our plans for the gradual deployment of the full system to the Patent Examining Corps. It will permit us to continue with system development. It will permit us to continue with the loading of the images, and it is consistent with the recommendations of the Industry Review Advisory Committee.

Mr. **Early**. Now is your person in charge of automation here today?

Mr. **Samuels**. Yes, he is.

Mr. **Early**. Is he ready to testify that we are doing everything with this budget that we could be doing to expedite our automation as quickly as possible? Can we hear from him?

Mr. **Samuels**. Sure.

Mr. **Giammo**. I am Thomas Giammo, Assistant Commissioner for Information Systems.

We can always do more with more money. However, I think we are doing what reasonably can be accomplished without wasting money. There is a certain pace that you have to do—we are going through a period for about two years now where we had to consolidate some of the attempts we had done before. We have had to redo some of the systems. We are finishing that phase now.

We are moving, I think, in a very reasoned way in the 1991 time period to begin to do the deployment of the system beyond where we have it now. The strong increases will come in 1992, 1993, and 1994. We are anticipating a very large budget request for those periods of time, as we begin to get confidence in what we have done and we are able to deploy it throughout the entire corps.

Mr. **Early**. Will you expand for the record on why those big increases are for 1992, 1993, and 1994 and not now? I would like you to do that for the record.

[The information follows:]

OUTYEAR INCREASES FOR AUTOMATION

The major cost elements in our current planning for FY 92 and beyond call for the acquisition of the optical drives needed to store the U.S. and foreign patents, the workstations to access the data base, printing capability to support both the patent examiners and the public, and a high capacity network to deliver the data to the workstations.

We intentionally targeted the beginning of deployment in late FY 1992 to take advantage of the significant technical improvements forecast by that time frame. We expected that these improvements would result in a much more stable technology, with improved performance and at very attractive prices—especially in the optical storage and networking technologies. The other major factor affecting both the beginning of deployment and significantly influencing the pace of deployment thereafter, was the availability of conditioned space. Another consideration, though not as important as the availability of space, was the capability of the PTO to logistically manage such a large deployment. While, in retrospect, we may have been somewhat conservative in our estimates of what we could logistically accomplish, the view is that we face a substantial challenge in loading over 5 million patents—once to the fast access optical devices, then again to the backup devices. Also, over 1,500 examiners must be trained, and 1,400 to 1,500 devices installed.

Mr. **Early**. On Mr. Samuels' statement, he says automation is expected to cause far-reaching changes in PTO's operating environment, some of which have already taken place in the trademark operation; do you agree with that?

Mr. **Giammo**. Yes, I think it is going to have a fundamental change in the entire office over the next decade.

Mr. **Early**. Do you think it will result in less people and probably produce more product with automation?

Mr. **Giammo**. You have to keep in mind the projections that were made in Mr. Samuels' statement regarding the phenomenal increases in workload. And I think what this will allow us to do is in terms of the total number of people—probably will have to go up. We are getting tremendous increases in the amount of workload.

What we are hoping to do is to be able to maintain the staff at a reasonable level while maintaining quality. What hurts a lot is when you get a lot of increases in workload. There is a tendency to let up on quality. I think one of the primary advantages of the automated system is that it allows individuals to accomplish more in the same period of time, working on applications. So that we are not standing still in trying to reduce our staff. We are swimming upstream against a very, very strong current.

Mr. **Early**. Still, you are not really running against it, either, with the automation.

Mr. **Giammo**. We have not yet made great inroads; I will be honest about that. I think we are on the verge of it. We have a very, very successful test bed operation with one group. We have one group out of 16 examiner groups that is fully automated now with both a text and an image search system. The experience with that has been extremely favorable.

We are moving to a second group in June. That will give us enough confidence in fine-tuning the system, so that again, starting in the 1992 time frame, we will begin massive deployments of the system into the entire corps. Now see, that is where the money comes. That is when you are stockpiling work stations with people; you start talking storage medium to store all the patents so that they can reach them on line and so forth.

AUTOMATED PATENT SYSTEM EXPENDITURES

Mr. EARLY. All right. Mr. Samuels, with regard to the justification of $14 million, which you say $17 million on page 27 of the justification, I want you to provide for the record what the total is in current and planned expenditures for the system.

Mr. SAMUELS. Yes, sir.

Mr. EARLY. I also want you to tell us when the system will become 100 percent operational for what you want, and what impact this system will have on patent quality and timeliness. I would like you to do that for the record.

Mr. SAMUELS. I certainly will, Mr. Chairman.

[The information follows:]

APS EXPENDITURES AND IMPACT

The FY 1991 Budget request supports the following current and planned expenditures for the APS System:

Fiscal year:	($000's)
1990	$35,372
1991	45,797
1992	47,727
1993	60,484
1994	60,386
1995	53,569

As previously stated, we are planning on substantial increases to our budget request in the FY 1992 to 1996 time frame. The major cost elements call for the acquisition of optical drives needed to store patent data, workstations to access the database, printing capability, and a high capacity network.

The Text Search system is already 100% operational and deployed to all 16 patent examining groups. The Image Search system is now deployed in one of the 16 examining groups. A second deployment is planned for this fiscal year. With the experience gained from these first two groups, and with new contracts in place to provide the necessary equipment, we will begin deploying to the remaining groups in FY 1992 and complete deployment to all groups in FY 1996.

Although the major benefits of the APS system are to be gained in the quality area, APS will also enable us to maintain patent quality and pendency despite significant expected increases in the size of the U.S. and foreign patent search files. The provisions of APS text and image search capability of the U.S. and foreign patent files, as well as providing access to non-patent literature, will permit examiners in the same amount of time they currently have to examine an application. The existing paper files cannot cope with this challenge for two reasons. First, they cannot be maintained at the level of integrity necessary to support an accurate determination of patentability by the examiners. Second, they are not sufficiently flexible to permit the deployment of the new methods of searching which the examiners need to cope with the volume of information the files will hold.

Mr. SAMUELS. If I could just follow up on what Mr. Giammo said. There is money in this 1991 budget request to begin deployment of what we called in the office "Project 4,000." And what this will provide is a PC for many if not all of the patent examiners in the Patent and Trademark Office.

This will allow them to compose their own office actions and to take advantage of various other office automation features. We think that this will result in greater productivity. It will also have the benefit of a reduction in our clerical work force. In the fiscal year 1991 request, for example, we projected a reduction of about 33 positions in the clerical support because the 1991 request will enable us to, I think, put 400 PCs on the desks of patent examiners. And we continue to plan to expand that.

It is a five year program that will cost approximately $10 million, but the offsetting gains will exceed those costs. So it will be a net plus to the Office.

Mr. Early. That is how I think we should be going. How much is included in your 1991 budget request for APS, and how much did you request of OMB for this?

Mr. Samuels. For the Automated Patent System, total budget request, I believe, is about $45 million.

Mr. Early. And how much did you ask OMB for originally?

Mr. Samuels. That is for the Automated Patent System, $45 million. What we asked OMB for was approximately that amount, Mr. Chairman.

Mr. Early. Okay, if you find that it was reduced, even a little, I want you to put that amount in the record.

Mr. Samuels. We will.

[The information follows:]

APS Contract Cuts

The initial FY 1991 budget proposal submitted by the PTO to the Secretary of Commerce proposed $46.062 million in funding for APS. During discussions with the Department, and as a result of refinements in the PTO's cost model, the Administration agreed on a proposed new funding level and on an adjustment to the deployment schedule. The resulting OMB FY 1991 budget submission requested APS funding of $45.797 million.

PATENT APPLICATION INCREASE

Mr. Early. You are projecting an increase in patent applications from 140,000 in 1990 to 177,000 in 1991. What accounts for this substantial increase?

Mr. Samuels. Basically Mr. Chairman, there has been an explosion in technology both here and world wide in fields of biotechnology, the computer arts, robotics, and superconductivity. It is just an explosion in technology. And whenever that occurs, we always see, and we see right now, an increase in filings.

This is not unique to the United States. The European Patent Office and the Japanese Patent Office are experiencing the same phenomenon.

Mr. Early. How do we maintain our 18 month average with that type of increase?

Mr. Samuels. Well we have been able to do it, Mr. Chairman, through aggressive hiring and training of our patent examiners, through our automation efforts, through maintenance of our classification systems, and through clerical support. Basically this 1991 budget request and other requests that have come up are for the most part for the people that we need in order to examine these applications and to process them.

The whole patent pipeline, if I could add, Mr. Chairman, is a very delicately balanced thing, and you cannot take from one area—for example, clerical support—without having negative impact on patent pendency.

Mr. EARLY. Don't we do that?

Mr. SAMUELS. I am making the point that that is a delicately balanced pipeline.

Mr. EARLY. Regarding the $26,249,000 and the 585 professional and clerical staff positions to handle this workload while maintaining the 18 month average, how did you determine the number of additional positions?

Mr. SAMUELS. Well with respect to the number of patent professionals, we have models that have been finely honed over the course of the last several years, which enable us to project our hires in various fields and what the attritions will be. Then we are able to model how many examinations somebody who has been in the office a certain number of years will be able to produce.

So we put all that information together in a statistical model, and we can fairly accurately predict how many more people we will need in order to examine the applications within a certain pendency period.

BIOTECHNOLOGY APPLICATIONS

Mr. EARLY. Now in your statement, you said that in the critically important biotechnology discipline, we have worked hard to build a cadre of well qualified examiners and to supply them with personal computers, access to commercial databases and other tools to search and examine this rapidly expanding field of technology.

Are you telling us that they all have the computers and the tools that they should have?

Mr. SAMUELS. Yes, we have made special efforts with the group 180, which deals with the biotech applications, to make sure that they have PCs available to them if they want them so that they can compose their own office actions, have access, on line access to commercial databases and other search tools.

I should add that we have been working very closely with the biotechnology industry. We have set up a biotech institute. This enables the PTO to communicate with those in industry and to learn from them. They provide us with a lot of searching tools and training for our patent examiners.

Mr. EARLY. Are you satisfied with your outreach for that particular type of expertise?

Mr. SAMUELS. Yes, I think we have had a very cooperative situation here with respect to the PTO and the biotech industry. They seem willing to help us. We acknowledge that we have a problem, but we are working toward reducing pendency in that area, and the biotechnology industry has been very helpful to us.

PATENT INTERFERENCE CASES

Mr. **Early**. Mr. Samuels, what are interference cases, and why are they increasing?

Mr. **Samuels**. Interference cases are when you either have a situation where there are two applications or an application and an already issued patent, in which it is determined that the same subject matter is claimed in either the bulk of those applications or in an application and in the patent.

I do not have the figures before me as to whether they are increasing or not. The problem with interferences, Mr. Chairman, is that they take a long time to resolve. Under the old rules and the mid-'80s, we changed them. But under the old rules, it was not uncommon to take five, ten, even twenty years to resolve an interference.

Under the new rules which went into effect in the mid-'80s, our goal is to reduce the time it takes to rule on an interference proceeding to about two years, and for the most part we are meeting that goal. But still, interferences, just by their very nature, are very complex and very cumbersome procedures.

BIOTECHNOLOGY APPLICATION

Mr. **Early**. Back to the biotechnology. On the biotechnology patents, are they meeting the 18 month average?

Mr. **Samuels**. No, Mr. Chairman. As I indicated, we acknowledge we have problems. The average pendency as of the end of fiscal year 1989 for biotech field was, I believe, 26.3 months. But that is down from what it was earlier. I think it reached 27 months, at one point, I think in April of 1988. So there is some improvement, but far from the 18 month pendency.

Our goal is to meet that 18 month pendency by the end of fiscal year 1992.

Mr. **Early**. Do you anticipate this budget will continue to decrease that biotechnology patent?

Mr. **Samuels**. Yes, it would, Mr. Chairman.

TRADEMARK APPEAL CASES

Mr. **Early**. You also indicate that trademark appeals cases are increasing. To what do you attribute this increase?

Mr. **Samuels**. Trademark filings are increasing. Primarily as a result of the operation of the new trademark law. The new trademark law provides another basis for which U.S. applicants can seek a Federal trademark registration.

Last year, we had about 83,000 applications, and we had planned for this year, as a result of the new law, about a 25 percent increase in filings to about 100,000. But it is primarily as a result of the operation of the new law.

Mr. **Early**. So you do not detect any particular or significant trends either in the source of violations or the plaintiffs?

Mr. **Samuels**. Well, I was addressing in that previous answer with respect to the filings. New appeals that applicants take when they receive a final rejection from the office go to the Trademark Trial and Appeal Board. We are anticipating an increase in workload for that body as well, primarily as just a function of filings.

About four percent of all applications work their way up to the Appeal Board. So as the filings go up, the workload of the Board goes up.

Mr. **Early**. So it is just that? It is not a source of violations or the plaintiffs themselves?

Mr. **Samuels**. Correct.

TRAINING NEW HIRES

Mr. **Early**. How about with regards to training? You request an increase of $359,000 for the Patent Academy to permit assimilation of a large number of new hires.

Does the office have a sufficient number of experienced staff to train new hires?

Mr. **Samuels**. Well, Mr. Chairman, the 1991 budget request provides for expansion of the Patent Academy. We are looking at more innovative ways in order to provide the necessary training for our new patent examiners.

For example, one thing we are looking at is rehiring recently retired patent examiners who have the interest in coming back and training new people within the office. Training is a very time consuming job, as you can imagine. And if we can have more people, former examiners who are obviously highly experienced and willing to put in the time and effort involved, that is all to the good, and frees up the other people within the training academy to do other things as well.

Mr. **Early**. Who is going to keep up with them? You know, we don't save money by not training.

Mr. **Samuels**. We are very much committed to providing all of our new employees, professional employees, with the necessary training. It takes years though, Mr. Chairman, before a patent examiner is able to examine applications with any degree of speed and quality, necessary quality.

CD–ROM DISKS

Mr. **Early**. Can you give me a little description on those CD-ROM disks?

Mr. **Samuels**. Right now, Mr. Chairman, we have a couple of products that we provide to our patent depository library network. Patent depository libraries are libraries, public libraries, university libraries that are located in 47 of the 50 States.

What we have on these CD–ROMs is a product which we refer to as CASIS, which is a classification system to patents that have been issued. Somebody can come into a PDL and have access to the CD–ROM product and get certain information regarding a particular patent by searching a variety of appeals.

We also recently, Mr. Chairman, made available a trademark CD–ROM, which is now available in a number of the patent depository libraries as well.

Mr. **Early**. Is that the facts that's stated, that those particular specific disks that——

Mr. **Samuels**. It's a very economical way to make information available. The problem with CD–ROMs is that they cannot be updated on a daily basis. So they do not have the latest information on them.

But I think that they are a valuable source of information. It doesn't supplant our automation activities. It's a supplement or adjunct to it.

PUBLIC CONSIDERATION OF PTO STAFFING LEVEL

Mr. EARLY. Let's go back to fee collections. You know, they are estimating an increase of their $51,643,000 in fee collection for fiscal year 1991.

Since fees offset about two-thirds of the entire cost of running the office, does the office believe that more consideration should be given to the impact on the public in determining an appropriate staffing level for this office?

Mr. SAMUELS. Well, Mr. Chairman, before we adjust fees, we go through a public hearing process, and we hear from all of the various constituent groups.

I think though that, by and large, people are satisfied with the level of fees. They'll complain whenever you increase fees but I think they do realize that they are getting——

Mr. EARLY. I am talking more of the level of staff.

Mr. SAMUELS. When we adjust fees and increase fees, for the most part it is for staff. So we do consult with our constituent groups.

Implicitly, whenever they talk to us about our fee levels, what they are really talking about in large part is our staffing needs. And if they felt that our staffing needs were too high, they would make that point when they came to testify with respect to the level of fees that we were charging.

Mr. EARLY. But I want to make sure that we are collecting the most that you can in fees and that you keep up with the 18 months pendency rate.

EXCESS FEE COLLECTIONS

Now, fee collection in the office's budget submission for fiscal year 1987 and 1988 and 1989 were understated from $10 million to $24 million when compared to the actual fees collected in these years.

First, why was there such an error in collections anticipated? And on what basis does the office project the estimated fee reimbursement in its budget submissions?

Mr. SAMUELS. I think the main problem, Mr. Chairman, is that we prepare these budgets two years before the actual operation of that fiscal year. It's very difficult for us to be able to foresee with total accuracy what the actual filings will be, especially when we're talking about technological developments. There can be a breakthrough any day in a certain field which will lead to an explosion of applications in the office.

I think we are doing a better job today than we have in the past in being able to predict our level of filings, but I don't think we are ever going to be able to predict with a hundred percent accuracy what those level of filings will be.

Mr. **Early**. I know 100 percent. But, that's the really quality of the office; I would think that it should be better than a $10 to $24 million discrepancy, so that we can better plan.

Mr. **Huther**. If I might add, Mr. Chairman, as Mr. Samuels pointed out earlier, once we set the fees under the provisions of our authorization bill, those fees remain in place for a period of three years.

So what we do is attempt to construct our budget plans around our three-year workload estimates. And we have to do that, in effect, four years before the final fee is collected in the third year of that cycle.

So what we do is use a different variety of trend analyses, picking experience over a long period of time, ranging back six or 10 years in some cases, to test whether or not our workload forecasts are correct.

The $10 million that you referred to is admittedly a large sum of money. When you view it in the context of a $615 million fee collection program, such as we are doing in the fiscal 1989-1990-1991 timeframe, that represents a fairly small percentage of that total workload.

Mr. **Early**. Ten is on the lower end though. It's 10 to 24. And with a three-year plan, I would think, from 1987 to 1988 to 1989, that when you come in, even though it is put together, you should be able to readjust it a little bit and be a little closer.

Mr. **Huther**. Well, that's partly why we developed in this submission before you four different ways of forecasting the filing trends in the fiscal year 1991 timeframe which we brought to OMB, and also to international organizations, to review the methodology that they use as well.

So, as Mr. Samuels points out, we don't think we've got a perfect crystal ball with which to do that forecasting. But we do believe that we are getting more accurate as time goes on.

SPACE INCREASE

Mr. **Early**. The budget request also includes $6 million for increases for additional space.

Why is this necessary and what are the plans?

Mr. **Samuels**. Space is a critical need to the PTO, Mr. Chairman. We need more space because we are hiring more people. We are automating. In order to automate, we have to retrofit a number of the buildings that we are currently located in.

By the way, we are currently located in all or part of approximately a dozen buildings in the Crystal City Complex. We have a total space budget this year, Mr. Chairman, close to $30 million. And it's because we're expanding.

Mr. **Early**. And would we actually save money if we put them all together?

Mr. **Samuels**. Consolidate? We are right now engaged in strategic planning with respect to what our space needs will be in the near future.

Our leases will expire in 1996 though we have a five-year option on them. We are actively pursuing what our alternatives are. Do we stay in Crystal City in the buildings that we are in? Do we consolidate in one big building, and if so, where? We are looking at various options right now.

HIRING PROFESSIONALS

Mr. **Early**. Has the PTO had any problems in attracting attorneys and other professionals given the specialized nature of your work?

Mr. **Samuels**. Well, Mr. Chairman, I guess in certain disciplines it is a little harder to attract qualified employees than in others—the biotech area, for example, where private industry can pay people two to three times as much as we can.

We are, in particular, having problems. But I think our main problem is not so much hiring the people. Our real problem is in retaining them. What we typically find is that after somebody has been in the office two years or three years, and maybe has gone to law school on the Government, at least in part, that they are extremely valuable assets to private industry, whether it's law firms or industry. I think the statistics show that 50 percent of the patent examiners that we've hired over the last three years have left the office. And that just gives you some idea as to the retention problems that we are experiencing.

APS PRIORITIES

Mr. **Early**. Tell me, if additional funds were available in fiscal year 1991 for the automated patent system, what would PTO's priorities be? For what purposes would additional resources be allocated?

Mr. **Samuels**. With respect to the Automated Patent System, I supposed that we would move ahead more aggressively with respect to the loading of the images and the deployment of the system to the various art groups. We have 16 art groups.

The full Automated Patent System right now is only deployed in one. And our plans for fiscal year 1991 is only to deploy it to one additional group. So, you see, there are a lot of other patent examiners, a vast majority who will not have access to the full system by the end of 1991 under this budget.

So if we did get additional resources, we would move ahead more aggressively in those areas.

FLEXIBILITY IN PROFESSIONAL SALARIES

Mr. **Early**. Fine. Now, first, do you have the same flexibility with regards to where you say you have a problem retaining these attorneys?

The SEC has some flexibility to adjust those salaries. Do you?

Mr. **Samuels**. Well, we have worked with the Office of Personnel Management with respect to gaining authority to pay special pay rates for our biotech examiners. And to that extent, we have some flexibility.

Mr. Huther reminds me that all of our engineering professionals are eligible for special pay rates.

In sum, Mr. Chairman, if I can make the point, what we are talking about with the special pay raise and other means to pay more money is just several more thousands of dollars. And when you're talking about being able to pay somebody maybe $35,000 as opposed to $30,000, when they can go out and make $70,000, it's not going to make much difference.

Mr. **Early**. Why don't you identify a couple of cases of people that have left. There doesn't have to be names, but cases where they—what the amount of money that they left for. Could you provide that?

Mr. **Samuels**. Okay.

[The information follows:]

ATTRITION OF PROFESSIONAL EXAMINERS

The best way for us to depict the impact of private sector salaries on losses of professionals to the private sector is by providing the following table. The numbers are not comprehensive, but they are representative of the patterns we've been experiencing since 1988.

Years of experience	Number of staff	Average PTO salary	Average new salary	Highest new salary
Patent examiners:				
0 to 1 year	3	$23,000	$36,333	$46,000
1 to 2 years	13	27,278	44,961	65,000
2 to 3 years	6	28,852	51,857	70,000
3 to 4 years	13	34,580	50,846	59,000
4 to 5 years	20	40,818	59,750	79,000
5 years	6	48,592	63,000	76,000
Executive level managers	2	70,000	150,000	180,000
Examiners-in-chief	13	75,500	170,000	300,000
Trademarks				
Managing attorney	1	63,000	83,000	83,000
Trial and appeals board attorney	1	76,000	90,000	90,000

Since 1982 we've hired highly qualified patent professionals with a grade average in school of B or better. These individuals are doing excellent work as patent examiners, but they are also highly attracted toward the private sector. The private sector has, through their ability to pay substantially more money for salaries then we can, been hiring many examiners from us while still in the middle of their law school program or typically upon completion of law school and receipt of a Juris Doctor degree or its equivalent. This accounts for the large number of examiners leaving after about four years experience in the Office.

Our ability to pay special rates for our examiners only makes us competitive with other government agencies. We lag far behind the private sector in what we can pay our people. Without exception, the Examiners-in-Chief who left the Board of Patent Appeals and Interferences indicated they were leaving the PTO for economic reasons.

Mr. **Early**. Gentlemen, we want to thank you for your testimony. You made an excellent statement and fine presentation.

[The following questions were submitted to be answered for the record:]

Questions Submitted by Congressman Early

FY 1990 Pay Raise Cost

QUESTION:

What is the total cost of the January 1990 pay raise for the Patent and Trademark Office and what is the cost of the pay raise for senior executives?

ANSWER:

The total cost of the January 1990 pay raise for the Patent and Trademark Office is $4,157,000 in fiscal year 1990. This includes $76,200 for the cost of the pay raise for senior executives.

QUESTION:

How will PTO absorb this cost? What impact will these reductions have on your agency's programs? Will these reductions have any effect on staffing levels or the length of time positions must remain vacant?

ANSWER:

In FY 1990, Congress directed the PTO to absorb the full cost of the January 1990 pay raise. The PTO will do so by using 1989 and 1990 excess fee revenue. In the Patent program, $3,831,000 of anticipated 1990 excess fee income will be used. In the Trademark program, $326,000 of 1989 excess fee income carried forward will be used. Use of excess fee income will prevent any negative impact on PTO programs. As such, there will be no impact on staffing levels or the length of time positions must remain vacant.

QUESTION:

Do you anticipate any other shortfalls which would require you to reallocate resources?

ANSWER:

No. The only unanticipated costs would be related to the higher than anticipated workloads the PTO is experiencing. The PTO will cover these costs and use unobligated balances carried forward and anticipated 1990 excess fee income. The PTO does not anticipate any reallocation of resources which would require a reprogramming notice.

QUESTION:

What is the full year cost of the 1990 pay raises in 1991? How much is included in your 1991 request for this purpose and how much are you being required to absorb? If you are absorbing the cost, how are you doing it?

ANSWER:

The full year cost of the FY 1990 pay raises in 1991 is $5,543,000, of which $5,156,000 is for the Patent program and $387,000 is for the Trademark Program. The full payraise amount for the Patent program is requested in the 1991 Budget. The Trademark program payraise is fully funded by offsetting fee collections.

Patent Workload

QUESTION:

The budget justification shows that you anticipate an increase in your original FY 90 estimate in patent applications (from 140,000 to 162,000) and a further increase in FY 91 (from 162,000 to 177,000). This is a 25% increase. What accounts for this increase?

ANSWER:

The rapid increase in growth of patent application filings is a world-wide phenomenon. In particular, the USPTO, EPO and JPO have experienced enormous growth in receipts during the 1980's.

The ability to predict application filings growth is at best an empirical process. The USPTO uses a mathematical trend analysis to forecast filings based upon our most recent ten years of actual application filings. Despite our best efforts to project filings, actual filing rates continue to exceed our estimates. The unprecedented growth has continued unabated for eight years with no sign of slowing.

The reasons for this growth are many-fold, but we are unable to determine which factors contribute most directly to this phenomenon. Strength of and confidence in the patent system apppear to contribute to applicants seeking protection for their invention. Perhaps, more significantly, world-wide growth in research and development expenditures may be an important economic indicator which seems to correlate most favorably with application filing trends.

APS Contracts Staff

QUESTION:

PTO is requesting a permanent funding base for APS Contract management staff. Why is this important to have?

ANSWER:

The APS contracts staff was established by the Department of Commerce in 1986-1987 to oversee contracts associated with the development of the APS system. In 1988, the contracts staff was transferred from DOC to PTO under the direction of the Assistant Commissioner for Information Systems. There was no transfer of positions or associated FTE. Since 1988, the PTO has absorbed the additional contracts staff within its ceiling. The FY 1991 request is an effort to formally obtain an increase in staff ceilings, recognizing the Contract staff's existence.

The APS Contracts staff provides contracting services, support and guidance in all APS related contracting efforts. The staff provides technical support to the Assistant Commissioner in efforts related to the preparation, negotiation, and execution of APS task orders. It also monitors contractor performance, and ensures compliance with the Federal Acquisition Regulations, the FIRMR, and other applicable regulations.

Appropriate Patent Pendency

QUESTION:

PTO has finally achieved and is now maintaining an 18 month patent pendency. Since this goal was set several years ago, is this satisfactory today or is further improvement needed? ...As APS is implemented, could the patent pendency be reduced further? What would be a desirable level?

ANSWER:

Achieving the eighteen months' average pendency goal was a major USPTO accomplishment in 1989. This eight year effort culminated during a period of unprecedented growth in patent application filings. All indications from the Patent community are that eighteen months is the most appropriate pendency period.

Achievement of the eighteen months' pendency goal provides significant benefits to industry and the public, most notably by
(1) protecting research and development investments,
(2) encouraging more rapid expansion of technology, and
(3) preventing importation of infringing products.

The optimum patent pendency period of eighteen months was first established in 1964 at a time when average pendency stood at 35 months. The need for and desirability of having an eighteen months' pendency program was set forth in a comprehensive study completed in 1972 entitled "A Study of the 18 Month Patent Pendency Goal - Its Validity, Attainability and Impact on the U.S. Patent

System." In 1979, the need for this pendency program was confirmed in the Zero Base Analysis conducted by the PTO, which was endorsed by the Office of Management and Budget (OMB).

In 1980, patent pendency stood at 22.6 months and without an infusion of resources the 1981 PTO budget model showed that pendency was headed for 48 months by the late 1980's. As indicated in the February 2, 1981, U.S. News & World Report article entitled "Patent System a Drag On Innovation", the long delays in getting patents were intolerable and Congressional action was sought to speed up the process.

The goal of shorter pendency was being sought during the late 70's and early 80's. In a letter to the Senate Appropriations Subcommittee dated February 26, 1979, Tom Arnold, past Chairman of the Patent, Trademark and Copyright (PTC) Law Section of the American Bar Association (ABA), and then President of the American Patent Law Association, said "I write because we find a crisis situation developing in the PTO." He stated that the delay in patent pendency was creating a situation damaging to the country's pace of technological development, balance of international payments, and commitments to new business ventures.

In a house hearing before Chairman Kastenmeier in 1980, Mr. Robert B. Benson, another past Chairman of the PTC Section of the ABA stated his concern regarding increasing pendency as follows:

> We are really asking to upgrade and make the U.S. Patent Office a first-class operation that can handle patents and get them out in a reasonable time so the businessmen and others can make investments based on those patents.
>
> I mentioned earlier, one time we had an objective to get the pendency down to 18 months, because if you file in many foreign countries based on a U.S. case, the patents are published at 18 months. That's common under PTC [Patent Cooperation Treaty], and yet we are going in the wrong direction.

Also in 1980, the PTC Section of the ABA passed the following resolution:

> Section favors in principle funding for the Patent and Trademark Office adequate for staffing and material at a level to permit high quality examination of patent applications with an average pendency time of 18 months and to provide adequate and timely services to the public.

The FY 1982 budget hearings were the scene of an even more emphatic call for reduced pendency. Former Commissioner Donald Banner, speaking for Intellectual Property Owners, Inc., said the "increase in backlog, and in average pendency, is a serious matter." He went on to state "We are trampling on our technology seed corn, and we shall regret it."

Former Secretary Baldrige, responding to the public concerns regarding the PTO, submitted proposed legislation, subsequently enacted in August 1982, to significantly increase user fees as a means of financing PTO's program improvements, including eighteen months pendency goal.

In 1985, the eighteen months' pendency was officially made a Department goal. Secretary Mosbacher reaffirmed the Administration's commitment to eighteen months' pendency in his May 5, 1989 letter to the Director of OMB wherein he included this goal as one of the Department's major objectives.

This Administration continues to receive strong indications from industry and the Congress that the eighteen months' pendency goal is valid and highly desirable. A good example of this is found in Congressman Wyden's letter to Secretary Mosbacher concerning the need to achieve the eighteen months' pendency goal promptly for biotechnology inventions.

In a recent meeting of the PCT Section of the ABA on the subject of harmonizing the world's patent laws, strong opposition was voiced against publication of U.S. patent applications without the guarantee of exclusive rights. Publication of patent applications eighteen months after filing is the rule abroad because most foreign patent offices are unable to grant patents, render patentability determinations, or in many cases even provide a patent search within eighteen months. U.S. industry strongly prefers to know whether exclusive rights will be granted prior to having their inventions disclosed to the world. If patent rights are not to be granted, the technology in many cases can be maintained as a trade secret. In this regard, the USPTO is the only major patent office in the world that is able to issue timely valid patents.

Eighteen months pendency is meaningful as a goal for two reasons. First, it is the shortest pendency reasonably attainable under current statutes and rules. Second, eighteen months is an international publication standard. The major foreign patent offices in the world, including the Japanese and European Patent Offices, publish at eighteen months. Under the Patent Cooperation Treaty, international applications are published in eighteen months.

USPTO cannot assure you that the above-mentioned associations or their members which have been quoted will still advocate 18 months' patent pendency. When pendency is at a reasonable level, our users seldom either complain or applaud. However, Tom Arnold, referred to earlier and a Dean of the Patent Bar, when recently addressing the suggestions by other members of the Bar that pendency should be allowed to slip, stated:

> It seems to me crisply clear that industry needs early examination of applications and should never tolerate the postponement of the commencement of examination more than six months beyond the filing date, and should never relax the commitment vigorously to the target of 18 months to complete examination. Those time frames are realistic and industry needs that standard of excellence in aid of judging infringement issues before committing millions of dollars to plant and product design.

By the end of FY 89, more than half of the patent examining groups had achieved the 18 months pendency goal. Some groups, such as the computer structure and systems group and biotechnology group, have yet to achieve 18 months' pendency. It is our aim to reduce the pendencies in all examining groups to eighteen months while improving examination quality. Biotechnology Group 180 is slated to achieve 18 month's pendency by 1992.

Eighteen months continues to be the most desirable pendency goal which is reasonably attainable. USPTO does not anticipate that the 18 months' pendency goal should or could be lowered. APS is being deployed to improve patent quality. While it may have some impact on patent pendency, it is not anticipated at this time that APS will be used by the PTO to significantly reduce pendency in the future.

Patent Search Integrity

QUESTION:

How would you rate the current integrity of patent search files? What are your goals in this area for FY 91? The future?

ANSWER:

As with any paper-based, hand-filing system, the PTO's search files have inherent limitations. Data gathered from an ongoing USPTO file integrity maintenance program revealed an average file disintegrity of about 7%. File disintegrity is caused by removal of documents from the file for patent examination purposes, documents misfiled, mutilated documents, and missing documents. Disintegrity in high technology and high use areas is well in excess of the 7% average.

In anticipation of the introduction of the Automated Patent System (APS) and for budgetary reasons, the file integrity program was reduced in FY 1984. However, APS has been delayed, and while no systematic, current data are available, spot checks and complaints from the Patent Examining Corps indicate that some portions of the search collection need to be checked more thoroughly and frequently. Because base resources have proven inadequate in maintaining integrity given the rapid growth in the Patent files, we have requested $243,000 in the FY 91 Budget in order to reinforce our file integrity efforts.

The USPTO continues to rely on the future implementation, office-wide, of APS as the only viable permanent solution to the file integrity problem. Recognizing, however, that the paper file must continue to be the USPTO's main search information resource pending conversion to APS, resources will be allocated or requested as needed to avoid major deterioration of those files.

Intellectual Property Rights

QUESTION:

What role is the PTO playing in current trade negotiations on intellectual property rights? Are you providing assistance to the USTR? Can you give us some idea of the extent of the workload involved and the resources allocated for these activities?

ANSWER:

The PTO plays a significant role in the multilateral and bilateral trade negotiations on intellectual property rights. With respect to the multilateral negotiations in the Uruguay Round to achieve an agreement on intellectual property rights (TRIPs), the Assistant Commissioner for External Affairs serves as the deputy negotiator responsible for intellectual property policy. He, together with attorneys from his Office, works closely with USTR, other Government agencies, and private industry to assist on the development of standards in the fields of patents, trademarks, copyrights, trade secrets, and integrated circuit lay-out designs. They also assist USTR in the actual negotiations of the TRIPs Agreement in the Round.

Bilaterally, attorneys from the PTO also work closely with USTR in the implementation of the Special 301 provisions of the Omnibus Trade and Competitiveness Act of 1988, as well as the intellectual property components contained in other trade agreements and bilateral investment treaties. The PTO has assisted the USTR most recently with negotiations with the following countries: Chile, China, Egypt, India, Indonesia, Japan, Korea, Malaysia, Mexico, Pakistan, Poland, the Phillippines, Saudi Arabia, Taiwan, Thailand, Turkey, the USSR, and Venezuela. In addition, the PTO has worked closely with USTR in developing and expressing the views of the United States with respect to the recent EC deliberations on permitting reverse engineering or decompilation of computer software prompted by the proposed directive under consideration.

While it is difficult to track resource expenditures by specific activity, we estimate that we have spent approximately five staff-years during the last year on the Uruguay Round and 18 bilateral negotiations. These estimates are in addition to recurring work involving the World Intellectual Property Organization and routine forms of assistance on various activities requested by agencies within the Department of Commerce.

WEDNESDAY, FEBRUARY 28, 1990.

U.S. TRAVEL AND TOURISM ADMINISTRATION

WITNESSES

ROCKWELL A. SCHNABEL, UNDER SECRETARY OF COMMERCE FOR TRAVEL AND TOURISM

LEE J. WELLS, DIRECTOR, OFFICE OF STRATEGIC PLANNING AND ADMINISTRATION

MARK E. BROWN, DIRECTOR, OFFICE OF BUDGET

Mr. EARLY. Next we are going to hear from the United States Travel and Tourism Administration. And this will be the last item that we will consider this morning.

The fiscal year 1991 budget request for the United States Travel and Tourism Administration is $14,362,000. This is an increase of $240,000 above the 1990 appropriation.

We will insert the budget justifications submitted in support of this request into the record at this point.

[The justifications follow:]

Department of Commerce
United States Travel and Tourism Administration

GENERAL STATEMENT

The United States Travel and Tourism Administration (USTTA) was established on October 1, 1981, by the National Tourism Policy Act. The mission of USTTA is to increase U.S. export earnings through trade in tourism by carrying out trade development, trade policy and statistical research programs designed to increase the American travel industry's awareness of the export market, facilitate the entry of medium and small sized American travel companies into the market, and eliminate barriers to market entry for those companies. Efforts to support this mission are carried out in three units: policy and planning, research, and tourism marketing.

The policy and planning activity initiates, directs and coordinates the formulation of domestic and international economic and trade policies and programs; identifies restrictive trade practices which act as barriers to the domestic and export growth of U.S. tourism services, supports negotiations to remove those barriers; and acts through bilateral and multilateral arrangements such as GATT, OECD, WTO and OAS to facilitate U.S. international trade in tourism. The research activity compiles economic and demographic data on international travel markets and analyzes and disseminates this data to meet the needs of public and private sector decision makers. The tourism marketing activity strengthens the export competitiveness of U.S. tourism firms, serves as a catalyst to enable the American travel industry to develop export promotion programs, and seeks to increase the number of new firms entering the international tourism export market and the number of established international tourism exporting firms entering additional markets.
The following is a comparison of the 1990 appropriation currently available with 1991 estimates and related data on current employment:

(Dollar amounts in thousands)

	Appropriation Currently Available		1991 Estimate		Inc.(+) or Dec.(-)		Perm.
	Perm. Pos.	Amount	Perm. Pos.	Amount	Perm. Pos.	Amount	Emp. 12/31/89
Salaries and expenses...............	91	$14,122	91	$14,362	'''	+$240	86

The request for USTTA in FY 1991 is 91 permanent positions and $14,362, an increase of $240 from 1990. It is proposed that this request be funded by direct appropriation. USTTA will repropose last year's fee on commercial airlines and cruise lines, the receipts from which will offset the Department of Commerce costs of providing travel promotion services. The Administration continues to support the objective of recovering the costs of USTTA programs through a fee on those who benefit from these programs. The request is comprised of the following changes:

Highlights of 1991 Changes

The increase of $240 in FY 1991 is comprised of adjustments to base of $651 and program decreases of $411.

Economic Importance of International Tourism

International inbound travel and tourism is an important element of the Department of Commerce mission of promoting the economic security of the U.S. through growth and improved domestic and international economic competitiveness. Foreign visitors totaled 34.2 million in 1988, up over 4 million from 1987. Their travel receipts, including fare payments to U.S. carriers, reached $37.1 billion, up $7.4 billion over 1987. It is estimated that in 1989 international visitors will increase to 38 million producing $43 billion in export income for the United States. In 1990 foreign visitors to the United States will exceed 40 million generating more than $48 billion in export revenue. Expenditures by foreign visitors in this country directly supported over 500,000 jobs in 1988 with payroll of $6.7 billion. Foreign tourist-generated tax revenues totaled over $3.4 billion in 1988, of which approximately $1.5 billion was federal tax revenue. The rest was state and local tax revenue. International visitors on average stay five times longer and spend six times more than their U.S. counterparts traveling in this country. They also visit more destinations and use paid accommodations, rental cars, intercity bus, train and domestic air travel proportionately more often than domestic travelers.

The U.S. travel deficit was $2.9 billion in 1988, a decrease of 58% from the 1987 imbalance. However the United States had travel account surpluses with major trading partners with whom the country had substantial trade deficits. Canadians spent $735 million more in this country than U.S. travelers spent in Canada, and Japanese visitors spent $4.5 billion more traveling here than American travelers spent traveling to Japan. The U.S. had merchandise trade deficits of over $10 billion with Canada, and over $50 billion with Japan in 1988.

International tourism is one positive area in which the U.S. can work to offset its trade deficit. This opportunity is even more promising when we consider that the Japanese Government has adopted the policy of encouraging 10 million Japanese citizens to travel abroad by 1991 to help offset its trade imbalance. The goal is to reduce their trade surplus by $20 billion in 1991. Current estimates are that the 10 million traveler goal will be surpassed two years ahead of schedule. Many nations are competing for a share of that opportunity. Given the United States' long standing imbalance, every effort should be made to capture a large percentage of the Japanese export receipts generated through trade in tourism.

Competition for international visitors is among and between national governments. With potentially large increases in the number of outgoing visitors, a country can increase its share by well conceived, orchestrated and coordinated efforts at increasing trade development efforts by all the components of its tourism industry. While other national governments heavily fund promotion campaigns and subsidize travel service providers, the United States does neither. With limited resources, the United States through the

United States Travel and Tourism Administration provides technical assistance, economic research and trade policy support intended to stimulate the ability and facilitate the willingness of the American travel industry to work cooperatively to generate export income for the United States through trade in tourism.

For the past several years USTTA has placed major emphasis on its partnership approach to regional, state and local tourism organizations and private sector tourism companies. With its knowledge and experience in the market place, USTTA serves as a catalyst in the market to organize and coordinate cooperative travel export development programs in which U.S. travel industry organizations seek business for their destinations, attractions and events. In FY 1989, USTTA generated nearly 5,300 partners who invested $15.7 million in a broad array of cooperative trade development programs.

USTTA organizes and participates in regional, state and local tourism conferences in the U.S. designed to increase market awareness, provide technical assistance to medium and small sized suppliers entering foreign markets, and enable states and the tourism industry within them to initiate cooperative, regional tourism export development programs in foreign markets. These efforts have resulted in international tour product development projects with America's Heartland, Old West Trail, and Foremost West states. They have also led to regional, cooperative, consumer television campaigns with the New England states, and the states of California, Florida, Illinois and New York.

To compete successfully in the world's tourism market, the United States needs to continue and expand these efforts. There are signs of success. The states' spending exclusively for international tourism programs increased 36% from 1987 to 1988, from over $8 million to $11.5 million.

However, the competition is not standing still. Canada, Ireland and Australia, all of which individually invest in excess of $30 million annually in their National Government's tourism trade development programs have taken dead aim on reducing America's share of the international export travel market. They have realized and publicly acknowledged that the U.S. efforts have been limited financially and they feel that with effective, well coordinated trade development, policy and research programs they can substantially increase their share of the international travel market at the direct expense of the United States. The European Travel Commission has launched a worldwide trade development effort to increase its share and as the European Community 1992 (EC-92) approaches, the United States must be prepared for even more aggressive efforts.

A key Department of Commerce objective is to increase exports of goods and services. The U.S. current account balance has swung dramatically from a small surplus in 1982 to a $95 billion deficit in 1988. The U.S. share of the international export market has dropped 30% since the 1950's. American basic industry has lost nearly half of the global market share it commanded twenty years ago. World markets have become complicated, unpredictable, interdependent and extremely competitive. The growth of the world markets, however, presents opportunities to export U.S. goods and services. International travel is America's largest business service export, accounting for 41% of the total in this category. Programs aimed at stimulating international tourism export growth are a prime USTTA objective.

JUSTIFICATION OF ADJUSTMENTS TO BASE
(Dollar amounts in thousands)

ADJUSTMENTS:

Adjustment	Activity/Subactivity	Perm. Pos.	Amount
11.G and 12.1 Personnel Compensation and Benefits			
Adjustment for 1990 pay increase and related costs:			
Total cost in FY 1990 of pay increase			+84
Less amount absorbed			-84
Anticipated FY 1990 pay increase supplemental			0
Amount in FY 1991 to provide full-year cost of pay increase			+122
Less amount absorbed			0
Subtotal, adjustment for 1990 pay increase			122

Effective January 1, 1990, Federal employees received a 3.6 percent pay increase. In 1990, USTTA is absorbing the full cost of this pay increase.

Adjustment	Activity/Subactivity	Perm. Pos.	Amount
Other Cost Changes			
Adjustments for 1991 pay increases and related costs:			
Total costs in 1991 of general pay increase			+86
Less amount absorbed			-43
Subtotal, adjustment for 1991 general pay increase			43
Total cost in 1991 of SES pay increases			68
Less amount absorbed			-34
Subtotal, adjustment for 1991 SES increases			34
Total adjustment for 1991 pay increase			77

The President's Budget includes an estimated general pay raise of 3.5% effective January 1, 1991. One-half of the 1991 costs of that increase will be absorbed. The estimate also includes an average SES increase of 22%, with 50% of the cost absorbed.

Adjustment	Amount
Overseas Wage and Price Increases/Contract Adjustments	+299

The increase of $299,000 for overseas wage and price increases/contract adjustments represents uncontrollable fluctuations in the exchange rate and inflation which result in mandatory increases in overseas operational costs as a result of being required to pay in local foreign currencies. Estimates were derived from projected currency and inflation increases provided by Data Resources Inc.

	Perm. Pos.	Amount
11.0 Personnel Compensation:		
Extra Compensable Day...		+17

An increase of $17,000 for the cost of one extra compensable day in 1991 compared to 1990 is calculated by dividing the 1990 estimate for personnel compensation and benefits by 261 compensable days.

12.0 Benefits:

Federal Employees' Retirement System

	Perm. Pos.	Amount
Federal Employees' Basic Benefits...		+25

The number of employees covered by the Federal Employees' Retirement System (FERS) will continue to rise as employees covered by the Civil Service Retirement System (CSRS) leave and are replaced by employees covered by FERS. USTTA estimates that the percentage of payroll of eligible employees covered by FERS will rise from 38.3% in FY 1990 to 45.0% in FY 1991. This will result in an increase of $25,000.

	Perm. Pos.	Amount
Thrift Savings Plan...		+4

The cost of agency contributions to the Thrift Savings Plan will also rise as FERS participation increases. The increase of $4,000 reflects the difference between the FY 1990 and FY 1991 costs associated with the employer contribution to the Thrift Savings Plan for FERS employees.

	Perm. Pos.	Amount
Civil Service Retirement System..		-13

The number of employees covered by the Civil Service Retirement System (CSRS) will continue to drop as positions become vacant and are filled by employees who are covered by the Federal Employee's Retirement System. USTTA estimates the percentage of payroll of employees who are covered by retirement systems will drop from 61.7% in FY 1990 to 55.0% in FY 1991. This will result in a decrease of $13,000 in the cost of CSRS contributions.

	Perm. Pos.	Amount
Federal Insurance Contributions Act (FICA):		
Old Age, Survivors, and Disability Insurance (OASDI)		+12

Employees covered by CSRS are not covered by Old Age, Survivors, and Disability Insurance (OASDI) but are covered by Hospital Insurance (Medicare). All other employees are covered by both OASDI and Medicare. As the percentage of payroll covered by FERS rises, the cost of OASDI contributions will increase. In addition, the maximum salary subject to FICA tax is $55,291 in FY 1990 and $67,639 in FY 1991, and the OASDI rate will increase from 6.17% in FY 1990 to 6.20% in FY 1991. This will result in an increase of $12,000.

	Perm. Pos.	Amount
Medicare		+1

All employees are subject to medicare contributions. The rate will remain at 1.45%, but the percentage of total payroll subject to FICA will increase from 83.0% for full-time permanent in FY 1990 to 86.0% for full-time permanent in FY 1991, resulting in an increase $1,000.

	Perm. Pos.	Amount
Health insurance premiums		+26

The Government's contribution to Federal employees' health insurance premiums increased by 25% effective January 1989. This increase requires an additional $26,000 calculated on the estimate presented in the FY 1990 Budget.

	Perm. Pos.	Amount
Employees' Compensation Fund		+2

The increase in the repayment to the Employees Compensation Fund is the result of higher cost in the period ending June 30, 1989, than in the year ending June 30, 1988. The 1989 charges will be reimbursed to the Department of Labor, Employees Compensation Fund. This amount will result in an increase of $2,000.

	Perm. Pos.	Amount
23.1 Rental payments to GSA		+15

The GSA estimates a 2.39 percent increase based on GNP projections for 1990 for currently occupied space. The estimate of $331,000 for FY 1990 rent payments was subtracted from the FY 1991 base of $346,000 for an increase of $15,000.

		Perm. Pos.	Amount
23.3	Communications, utilities and other rent:		
	Federal Telecommunications System (FTS)		+7
	An increase of $7,000 represents 4.0% of the revised 1990 base for an adjusted 1991 cost less the 1990 Congressional estimate of $45,000.		
	FTS 2000		-15
	Following implementation of FTS-2000, GSA anticipates lower rates charges for telephone services.		
24.0	Printing		+44
	Cost for printing and binding has increased due to an increase in labor, paper and commercial procurement prices. In FY 1989 an ATB of 4% was given. The increase to 7% provides an additional ATB in the amount of 18,960 based on the budget submitted. In FY 1990 an ATB of 7% is requested to provide for the increased cost. This adjustment represents an increase of $44,000.		
25.0	Other services:		
	Working Capital Fund		+28
	The estimated increase of $28,000 provides inflationary cost increases in the Departmental Working Capital Fund to maintain the current level of operations. These include items such as within-grade step increases, rent payments to GSA, payroll costs, and other adjustments which are beyond the control of the Department.		
	Other Services		-5
	Maintenance of equipment decreases in 1991 due to replacement of old equipment with higher repair costs in 1990.		
26.0	Supplies and Materials		+5
	The $5,000 increase represents 4.0% of the 1990 Congressional estimate of $119,000.		
Total, Adjustments-to-Base			+651

Appropriation Language and Code Citation

1. "For necessary expenses of the United States Travel and Tourism Administration..."

16 U.S.C. 18
22 U.S.C. 2121-2127

16 U.S.C. 18 requires the "Secretary of Commerce to cooperate ...in the collection, publication, and dissemination of information with respect to places of interest, ...for the purpose of encouraging, promoting, or developing such travel. Nothing shall prohibit ...materials in foreign languages..."

22 U.S.C. 2121-2127 provides that "...the Secretary of Commerce shall...develop, plan and carry out a comprehensive program designed to stimulated and encourage travel to the United States by residents of foreign countries..."

2. "including employment of American citizens and aliens by contract for services abroad;"

No Specific Authority

44 CG 761, OPM guidance, and House Report 89-188 have concluded that Federal agencies must have specific authority to employ personnel by contract. In order to present its overseas exhibitions USTTA often requires the use of receptionists, clerical, procedures; or who only need to be employed for a short period of time. In some cases, however, it is more advantageous to employ U.S. citizens in the host country because they have greater familiarity with American methods and, therefore, require less effort to train.

3. "rental of space abroad for periods not exceeding five years, and expenses of alteration, repair, or improvement;"

No Specific Authority

40 U.S.C. 278a prohibits expenditures for building rental if the rent is more than 15 percent over the fair market value of the premises and prohibits expenses for alterations, improvements, and repairs of rented premises which exceed 25 percent of the rent.

Buildings, pavilions, and space in such structures must be rented for exhibitions. Rental terms are established by fair authorities and may or may not exceed the percentage provision in 40 U.S.C. 278a. Without this waiver, the program may be prohibited form exhibiting at certain fairs which support USTTA's tourism development objectives.

4. "payment of tort claims in the manner authorized in the first paragraph of 28 U.S.C. 2672, when such claims arise in foreign countries;"

No Specific Authority

28 U.S.C 2672 provides for settlement of tort claims for money damages of $2,500 or less against the United States by the head of each Federal agency for loss of property or personal injury or death caused by a negligent or wrongful act of any private person, would be liable under local law. However, 28 U.S.C. 2680 exempts the settlement of tort claims which arise abroad from the provisions of 28 U.S.C. 2672.

5. "and not to exceed $12,000 for representation expenses abroad;"

No Specific Authority

5 U.S.C. 5536 prohibits additional pay or allowance to employees unless the appropriation therefore specifically states that it is or the additional pay or allowance.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Dollar amount in thousands)

Activity: International tourism trade development
Subactivity: Tourism export development

Goals and Objectives for FY 1991

Goals:

The goal of tourism export development is to increase U. S. export earnings through trade in tourism.

Objectives:

The objectives of this subactivity are to encourage the U.S. travel and tourism industry to expand its international trade efforts to increase U.S. export earnings through trade in tourism; expand international markets by removing or reducing barriers and impediments to international trade in tourism; increase the number of medium and small-sized firms involved in the international travel export market; and provide accurate and timely market research and economic data on international travel markets to international travel exporters. Other objectives are to provide medium and small-sized businesses with the market intelligence, counseling and training necessary to develop their international tourism export marketing programs; and to encourage and sponsor additional involvement by regional organizations, state and local governments in international tourism export development efforts through seminars, workshops and other forms of technical assistance.

The benefits of achieving these objectives is seen in additional job creation, reduction in the balance of payments deficit, increased tax revenues, greater peace and understanding among people, better care of the environment, improved educational opportunities and improvement in our quality of life.

Base Program

To meet its goals and objectives, USTTA develops pertinent international trade information on numerous export development opportunities for the American travel industry and provides counseling and training on these opportunities for the U.S. and international tourism business community. USTTA develops and makes available to the private sector as well as regions, state and local governments, a wide variety of tourism export development programs, designed to meet planning and marketing needs of industry users and achieve the ultimate aim of increasing U.S. international tourism exports.

HEADQUARTER'S STAFF SUPPORT (Personnel 25; $1,592)

In support of USTTA goals and objectives, USTTA headquarters staff plans and coordinates the use of resources to implement trade development, trade policy and economic research programs and to support staff abroad.

Marketing Staff-(Personnel 15; $987)
The Office of the Assistant Secretary for Tourism Marketing is responsible for establishing, implementing and supervising the agency's tourism trade development program. This office is also responsible for the development and implementation of cooperative trade development programs with U.S. regions, states, cities, and the travel industry. The office of the Assistant Secretary establishes and maintains working relationships with U.S. tourism groups to enlist cooperative partners, provide technical assistance and training to the U.S. travel trade, and holds trade development conferences aimed at coordinating U.S. trade development in key foreign markets. The office conducts program reviews to assess and direct USTTA activities abroad. The marketing staff is also responsible for training, career development, financial management, and liaison with other segments of USTTA and Departmental program elements as well as for building a highly motivated, well-trained corps of tourism-oriented career officers for regional office operations. These foreign service officers were selected in FY 1989 as a result of a rigorous assessment process. Candidates were tested for their commercial travel trade and management experience as well as their intercultural and interpersonal skills. This office is also responsible for developing, organizing and coordinating the Federal government's role in and promotion of international fairs, expositions and special events, and international sporting events held in the United States. USTTA coordinates all Commerce Department efforts involving the Bureau of International Expositions (BIE) including counseling potential U.S. fair organizers on BIE application procedures, reviewing private sector applications for compliance with BIE regulations, and making recommendations to the Secretary on the viability and feasibility of individual projects.

Research Staff-(Personnel 6; $329)
The Office of Research provides staff support and develops economic and marketing data required for program planning and evaluation in the public and private sector; develops market analyses in direct support of Departmental and agency objectives and strategies; provides planning input for, undertakes necessary research in support of, and advises on the direction and content of programs contained in the agency's regional trade development plans; carries out tracking and periodic evaluation studies to assess the relative effectiveness of USTTA's trade development programs; forecasts trends in international tourism; maintains a data bank of international travel information; and services numerous travel industry requests for technical assistance and research information each year.

Policy Staff-(Personnel 4; $276)
The Office of Policy and Planning is responsible for the development of domestic and international tourism trade policies, legislative initiatives, and planning functions, including preparation of position papers on tourism industry issues, legislative proposals and related analyses, comments, and testimony. It provides staff support to the Tourism Policy Council and the Travel and Tourism Advisory Board. The office interacts with other governmental policy offices, intergovernmental organizations and the travel trade. It also develops policy and planning strategies in the area of international travel and tourism agreements; represents global U.S. trade in tourism policy interests, with particular emphasis on obtaining improved access for U.S. tourism efforts; represents the United States as an official participant at international meetings; and conducts bilateral and multilateral negotiations with other national governments to reduce or eliminate impediments to international trade in tourism. The office identifies policy options to improve the market climate in which the U.S. travel industry must operate. The office analyzes the impact legislation and regulations proposed within and outside the United States will have on the American travel industry.

REGIONAL OFFICE OPERATIONS (Personnel 51; $10,019)

Regional office operations abroad directly support USTTA goals and objectives to increase U.S. export earnings through trade in tourism and to increase the number of medium and small-sized firms participating in the international travel market. These regional offices were established to carry out Department of Commerce programs for the direct benefit of the U.S. economy and the U.S. tourism industry. USTTA has offices in nine countries; one domestic office in Miami, Florida, to service five South American countries and contract representation to service three Far East countries. Regional offices also operate cooperative travel development, technical assistance, and educational programs in 11 other countries in cooperation with the U.S. and Foreign Commercial Service and local VISIT USA Committees. In total, these primary and secondary markets provide over 85% of all international visitors to the U.S. and 79% of U.S. tourism export earnings. The regional offices develop and implement cooperative trade development and support programs which stimulate international trade in tourism to all areas of the U.S. These programs are developed with the cooperation and input of Visit USA Committees in each market which consist of U.S. and foreign travel industry marketing representatives who provide the public and private sector support for USTTA's export development programs. Cooperative programs may include cooperative advertising, journalist and travel trade familiarization tours, market development travel missions, tour development travel trade shows, media events, and marketing workshops and seminars for the travel industry. Cooperative support programs may include the development of informational travel brochures and displays, consumer and trade information services, maintenance of film and video libraries, photo libraries, and reference library material. These programs stimulate demand for U.S. tourism products. Informational materials are distributed through regional office consumer and trade information centers by trained market specialists and information counselors. These counselors educate and motivate the foreign-based wholesale and retail industry to increase their efforts in behalf of international tourism export development to the United States while providing travel information to consumers and retail travel agents.

POLICY PROGRAM ($0)

This program area conducts activities contributing to the following major objectives: supporting bilateral and multilateral representations focused on reducing trade barriers to U.S. tourism exports; initiating and supporting activities on tourism trade issues that arise in international forums such as GATT, OECD, OAS and WTO to facilitate U.S. tourism exports; coordinating international transportation policy initiatives with the Departments of State and Transportation, particularly with regard to U.S. civil aviation bilateral negotiations; providing support to the U.S. Trade Representative in conducting and implementing results of trade negotiations in tourism services; developing a U.S. policy response to EC- 92 programs, directives and regulations; and implementing the tourism provisions of the U.S.-Canada Free Trade Agreement, U.S. bilateral tourism agreements and other country specific policy arrangements.

USTTA's trade policy program coordinates development of domestic and international tourism policy and legislative initiatives with the travel industry, the Congress and with other Federal agencies, including other units of the Department of Commerce. The program identifies policy options to improve the economic and political climate in which the U.S. travel industry must operate. It analyzes the impact legislation and regulations proposed within and outside the United States will have on the American travel industry. It also supports the Under Secretary by preparing planning documents, position papers, and policy speeches.

The tourism policy program identifies foreign government-imposed impediments to international travel and represents the United States in bilateral and multilateral negotiations aimed at reducing or removing these barriers. Major impediments include exchange controls limiting the amount of currency a traveler may take out of his home country to pay for travel services obtained abroad; excessive passport fees and departure taxes; restrictions which prohibit individuals of a certain age from traveling abroad; non-interest-bearing bank deposit requirements for nationals seeking to travel abroad; exit visa requirements; and arbitrary limits on transportation capacity to and from U.S. foreign travel markets.

USTTA also administers bilateral tourism agreements between the U.S. and foreign countries and coordinates the national Tourism Policy Council. Mandated by the National Tourism Policy Act, the interagency council (1) coordinates the policies and programs of Federal agencies that have a significant effect on tourism, recreation, environmental quality, economic development, transportation, and national heritage preservation; (2) identifies areas of cooperation between Federal agencies and the programs they administer; (3) assists in resolving interagency policy and program conflicts; and (4) seeks and considers industry, state and local government concerns about Federal policies which conflict with the orderly growth and development of tourism. USTTA also encourages state and local governments to adopt tourism policies to facilitate the growth of America's tourism industry.

Policy also coordinates Federal aviation, transportation, cultural and historic preservation, recreation, and international trade policies as they relate to the National Tourism Policy. USTTA leads U.S. Government delegations at multilateral international negotiations affecting international trade in tourism.

RESEARCH PROGRAM ($860)

USTTA's research program develops economic and marketing data required for program planning and evaluation in the public and private sector of the U.S. tourism industry; develops market analyses in direct support of Departmental and agency objectives and strategies; provides planning input for, undertakes necessary research in support of, and advises on the direction and content of trade development programs contained in the Agency's regional marketing plans; carries out tracking and periodic evaluation studies to assess the relative effectiveness of USTTA's trade development programs; forecasts trends in U.S. international tourism; maintains a statistical data bank of international travel industry information; and services numerous travel industry requests for technical assistance and research information each year.

USTTA gathers, analyzes, and provides comprehensive, timely data on international travel market economic activity to public and private sector marketing and policy planners. Major components of the USTTA research program include:

USTTA Survey of International Air Travelers - ($453)

Initiated in FY 1982, the In-Flight Survey (IFS) gathers essential marketing information from U.S. and foreign travelers departing the United States. This survey requires the cooperative support of major international air carriers and U.S. international airport authorities. USTTA finances this program in part through user fees, subscriptions, and interagency funding. Besides providing comprehensive analyses of visitor characteristics, travel patterns and spending habits, the survey is used to upgrade the Commerce Department's data on the U.S. international travel dollar accounts. OMB has mandated that BEA use the traveler expenditure data generated by this survey for estimating U.S. international travel receipts and payments (in the balance of payments accounts). Using the In-Flight Survey data, the Bureau of Economic Analysis (BEA) figures for foreign visitor spending in the U.S. were revised upward by over $12 billion for 1988, and the chronic international travel dollar deficit was revised downward by nearly $5 billion. Notwithstanding this important use, the travel industry relies heavily on the IFS. Annual reports are issued to subscribers on inbound and outbound market characteristics. Special analyses and user tapes are provided to major sponsors and individual purchasers as requested.

Basic Foreign Travel Statistics - ($112)

USTTA collects two types of basic data on international travelers. The first is a monthly count of non-immigrant foreign visitor arrivals by country of residence. Derived from INS Form I-94, the data is collected by the Immigration and Naturalization Service (INS) on inbound visitors only to the U.S. This report provides the basic information on numbers of foreign visitors traveling to the U.S. from various countries. USTTA releases to paying subscribers quarterly reports of this data. USTTA receives these reports on a monthly basis from INS and analysis them to determine the number of visitors by country of residence, port of entry, mode of transportation, and type of visa. These data provide a base-line measurement on U.S. tourism export activities.

The second tracks air arrivals and departures of aliens and U.S. citizens by point of origin and destination. These data are derived from the INS Form I-92 on a flight by flight basis. The information, processed and published by the Department of Transportation (DOT), provides critical support for the In-Flight Survey. It is used to weight the In-Flight Survey sample up to the known universe. In addition, it is the only source of data available on international travel patterns and volumes of outbound U.S. citizens. It also provides a means for analyzing U.S. international carriers' competitive performances against foreign carriers in individual foreign markets.

Cosponsored Consumer Surveys - ($225)

In-country consumer surveys are jointly-sponsored by USTTA and the Canadian Government. Sale of survey reports and sponsorship by U.S./foreign travel industry organizations help fund the studies. The annual cost of the surveys is about $550 thousand, of which USTTA provides $225 thousand , Tourism Canada $225,000 and other, non-Federal sponsors, $100 thousand. The studies establish U.S. competitive positioning, potential travelers' characteristics, prime target market segments, and their images, attitudes, and international travel preferences. Data from these surveys guide development of U.S. public and private sector cooperative programs in the countries studied.

Marketing Program Evaluation Studies - ($70)

Program evaluation studies track and assess the effectiveness and impact of selected USTTA marketing programs. These studies include pre- and post-campaign consumer surveys, coupon conversion studies, tracking of changes in visitation patterns of specific target market groups, and follow-up surveys of cooperative trade show and seminar attendees.

WORLD FAIRS AND EXPOSITIONS-($0)

USTTA develops, organizes, and coordinates the Federal Government's role in and promotion of international fairs, expositions, special events, and international sporting events which take place in the U.S. USTTA coordinates all Department of Commerce efforts involving the BIE including counseling potential U.S. fair organizers on BIE application procedures, reviewing private sector applications for compliance with BIE regulations, and making recommendations to the Secretary of Commerce on the viability and feasibility of individual city's submissions to BIE for World's fair/exhibition recognition. USTTA will develop an international cooperative trade development strategy to support the 1992 Christopher Columbus Quincentennial and the 1994 World Cup Soccer Tournament both to be held in the U.S.

MULTILINGUAL RECEPTIONIST ($240)

This cooperative program is supported by USTTA, The Department of Education, airport, city and county authorities . USTTA's portion of funding represents 16 percent of the total amount spent on this program. The multilingual receptionist program now operating at 12 major U.S. airports provides assistance and interpreting service to non-English speaking international visitors. The receptionists are stationed in Federal inspection areas and work closely with the Immigration and Naturalization Service, the Customs Service and the Department of Agriculture to expedite the entry of foreign visitors.

Summary of Workload and Performance Data

	FY 1988 Actual	FY 1989 Actual	FY 1990 Estimate	FY 1991 Estimate
Number of cooperative partners	4,725	5,258	3,905	4,355
Dollars invested by cooperative tourism export partners	14,028,169	15,680,621	11,595,000	16,900,000
Number of journalist familiarization tours	458	356	333	520
Number of travel trade missions	90	89	71	78
Number of travel mission participants	2,192	1,269	1,057	1,950
Number of workshops and seminars held by regional offices	101	116	101	117
Number of trade participants in workshops and seminars	16,317	17,210	14,650	18,200
Number of consumer requests for information	403,852	435,174	450,500	611,000

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Dollar amounts in thousands)

Activity: International tourism trade development
Subactivity: Executive direction

Goals and Objectives for FY 1991

Goals:

The goal of USTTA executive direction is to direct and administer the Agency's efforts to stimulate U.S. export earnings through international trade in tourism to the United States.

Objectives:

The objectives of this function are to: (1) develop and implement managerial policies; (2) provide strategic and tactical direction to USTTA trade development, trade policy and statistical research programs; (3) provide effective administrative support of agency operations; and (4) represent USTTA before the Congress, Federal agencies and other governmental and private sector organizations.

Base Program

USTTA's executive direction is provided by the Office of the Under Secretary and the Office of Strategic Planning and Administration. Together these offices provide strategic and administrative guidance and support to headquarters and foreign operations. Resources required for centralized services are also provided in this subactivity.

HEADQUARTERS STAFF (Personnel 15; $833)

Office of the Under Secretary - (Personnel 7; $534)
The Under Secretary of Commerce for Travel and Tourism is responsible for the management and leadership of USTTA. The Under Secretary exercises the duties and responsibilities of the Secretary under the International Travel Act of 1961, as amended by the National Tourism Policy Act of 1981, and other authorities as delegated by the Secretary. The Under Secretary provides leadership at the national level to

focus the attention and efforts of private, state and local tourism officials on increasing U.S. export earnings through international trade in tourism. The Under Secretary for Travel and Tourism is responsible for directing USTTA activities including Executive branch coordination, regional/state/city /industry/ intergovernmental coordination and liaison, public relations support, and policy direction for the Travel and Tourism Advisory Board and Tourism Policy Council

Office of Strategic Planning and Administration - (Personnel 8; $299)
The Office of Strategic Planning and Administration serves as the primary administrative arm of the Office of the Under Secretary, the Assistant Secretary for Tourism Marketing and the USTTA Foreign Service. The office is responsible for the effective development of the agency's strategic plan and the operation of USTTA's financial, administrative and personnel management programs. It also serves as the USTTA representative to numerous Department of Commerce organizations and other agencies.

CENTRALIZED SERVICES ($1,229)

Centralized services consist of accounting, personnel, and administrative support furnished by the Department of Commerce to USTTA offices located in Washington. These services include GSA space rental, postal charges to USPS, telephone services, FTS, equipment rental, general administrative printing, office supplies, ADP services and equipment.

Mr. EARLY. Here to testify in support of this budget request is Rockwell Schnabel, Under Secretary for Travel and Tourism.

Since this is your first appearance before the committee, we will insert your biographical sketch in the record at this point, and then you may proceed with your statement.

[The biography of Mr. Schnabel follows:]

BIOGRAPHY OF ROCKWELL A. SCHNABEL, UNDER SECRETARY OF COMMERCE FOR TRAVEL AND TOURISM

Rockwell A. Schnabel is Under Secretary of Commerce for Travel and Tourism. The Former U.S. ambassador heads the United States Travel and Tourism Administration. He completed a three year tour of duty as the United States ambassador to Finland in February 1989 and has been associated with the Department of Commerce since that time.

The United States Travel and Tourism Administration (USTTA) is the agency responsible for increasing U.S. export earnings through trade in tourism. With headquarters in Washington, D.C., USTTA maintains offices in ten major international cities and establishes this nation's international tourism policies and trade development programs.

Born in Amsterdam, The Netherlands in 1936, Schnabel relocated to the United States in 1957 and became a U.S. citizen. He served in the U.S. Air National Guard.

An international investment banker, he joined Bateman Eichler, Hill Richards, Inc., Los Angeles, in 1959, where he held various senior management positions including president of the firm's holding company, Bateman Eichler, Hill Richards Group, Inc. From 1975 to 1979 he was president of Unilife Assurance Group, Luxembourg, and from 1983 to 1985 he was deputy chairman of the board of Morgan, Olmstead, Kennedy & Gardner, Inc. (now Wedbush Morgan Securities), in Los Angeles.

Prior to government service he was active in a number of civic, political, professional and cultural organizations in Los Angeles. He was a founder of Citizens for America, a national civic league, and was active in the Los Angeles Olympic Organizing Committee for the '84 Games serving as the envoy to The Netherlands. He was awarded the Medal of Honour by The Netherlands Olympic Committee and a Gold Medal by the Dutch government. Schnabel was also granted the decoration of Commander, Grand Cross of the Lion of Finland by the president of Finland.

Schnabel is married to the former Marna Del Mar. They have three children.

SUMMARY STATEMENT

Mr. SCHNABEL. Thank you, Mr. Chairman. Good morning.

The Administration's proposed budget for the United States Travel and Tourism Administration for Fiscal Year 1991 is $14,362,000. This proposal is $240,000 more than the FY 1990 appropriation for the agency.

For the first time in many years, the budget requests appropriated funding for USTTA. This funding will enable USTTA to work with the industry to promote travel to the United States.

The Administration will be transmitting shortly, a proposal which would assess a fee on commercial airlines and cruise lines who directly benefit from the USTTA's activities. These fee revenues will help reduce the Federal budget.

The travel and tourism industry is extremely diverse with numerous components comprising the largest service industry in the world. In fact, according to a recent study by American Express, the total size of the industry worldwide is two trillion dollars, employing some 100 million people in the world, one in 16, in the work force.

In the United States, the industry is the second largest employer next to health services, directly employing approximately six million people, and the size of the U.S. travel and tourism industry is $350 billion, or $1 billion a day.

I hear these numbers, and I am amazed that this industry still suffers from a serious lack of recognition both within its own ranks and externally. While we have been making some strides through the work of the National Tourism Awareness Council and National Tourism Week, there is much more to be done to position the travel and tourism industry where it belongs with appropriate recognition and awareness of the tremendous economic contribution that it makes.

Recent performance of the inbound market is definitely helping efforts. This nation achieved a very significant milestone in 1989, during which the United States enjoyed a travel surplus of some $450 million for the first time, as foreigners spent more money visiting the U.S. than U.S. citizens spent traveling abroad. Globally, the industry is booming, and we are doing our best to increase our market share of these valuable travelers as the world's destinations become more and more competitive.

During 1989, some 38 million people visited the United States, spending a total of $43 billion, which made it the number one export in this country. With the 1991 request, USTTA proposes to do the following:

One, develop and implement integrated cooperative travel export promotion programs in nine primary and 16 special markets abroad.

Two, conduct regional, state, and local tourism market planning and private development seminars. Areas in rural America will be included in this educational type of program.

Three, coordinate the Federal Government's role in supporting and marketing major international events to be held in the United States, which will have a significant impact on America's export earnings from trade and tourism, such as the World Soccer Games that are coming to the United States.

Number four, collect, analyze and disseminate accurate and timely economic and consumer behavior data on America's foreign travel markets, and work on improving the statistics.

Number five, identify and attack foreign and domestic impediments to international trade in tourism through legislation, bilateral and multilateral negotiations, and coordinate national tourism policy through the Commerce Secretary's Tourism Policy Council and the Travel and Tourism Advisory Board.

And as we look into the future, we can see many opportunities for the industry. We are very fortunate to live in an era of reduced political tensions worldwide, which should enhance international travel.

We predict that soft adventure travel such as rafting, trips to our national parks, and dude ranches will all benefit from these travelers. The cultural and educational component to travel will also be very important in the future.

Mr. Chairman, that concludes my brief remarks. And I would be very happy to answer any of your questions.

[The statement of Mr. Schnabel follows:]

TESTIMONY OF THE
HONORABLE ROCKWELL A. SCHNABEL
UNDER SECRETARY OF COMMERCE FOR TRAVEL AND TOURISM
BEFORE
THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON COMMERCE, STATE, JUSTICE AND RELATED AGENCIES

9:30 A.M.

FEBRUARY 28, 1990

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE.

THE ADMINISTRATION'S PROPOSED BUDGET FOR THE UNITED STATES TRAVEL AND TOURISM ADMINISTRATION (USTTA) FOR FISCAL YEAR 1991 IS $14.362 MILLION. THIS PROPOSAL IS $240 THOUSAND MORE THAN THE FY 1990 CONGRESSIONAL APPROPRIATION FOR THE AGENCY.

FOR THE FIRST TIME IN MANY YEARS, THE 1991 REQUEST INCLUDES FUNDING FOR USTTA TO WORK WITH INDUSTRY TO PROMOTE TRAVEL TO THE UNITED STATES.

AS IT HAS FOR THE PAST THREE YEARS, THE ADMINISTRATION WILL ASK CONGRESS TO ESTABLISH A FACILITATION FEE. WE WILL BE TRANSMITTING SHORTLY A LEGISLATIVE PROPOSAL WHICH WOULD ASSES A FEE ON COMMERCIAL AIRLINES AND CRUISE LINES.

THE TRAVEL INDUSTRY

THE TRAVEL AND TOURISM INDUSTRY IS EXTREMELY DIVERSE WITH NUMEROUS COMPONENTS COMPRISING THE LARGEST SERVICE INDUSTRY IN THE WORLD. IN FACT, ACCORDING TO A RECENT STUDY BY AMERICAN EXPRESS, TOURISM IS A TWO TRILLION DOLLAR INDUSTRY WORLDWIDE, EMPLOYING 100 MILLION PEOPLE OR ONE OUT OF EVERY 16 PEOPLE IN THE WORLD'S WORKFORCE.

IN THE U.S. THIS INDUSTRY IS THE SECOND LARGEST EMPLOYER (FOLLOWING HEALTH SERVICES), DIRECTLY EMPLOYING NEARLY 6 MILLION PEOPLE. DOMESTIC AND FOREIGN TRAVELERS TOGETHER SPENT $350 BILLION DOLLARS IN THE UNITED STATES LAST YEAR, MAKING TRAVEL AND TOURISM THE THIRD LARGEST RETAIL BUSINESS IN THE COUNTRY. TOURISM IS A BILLION DOLLAR-A-DAY INDUSTRY!

I HEAR THESE NUMBERS AND I AM ASTOUNDED THAT THIS INDUSTRY STILL SUFFERS FROM A SERIOUS LACK OF RECOGNITION, BOTH WITHIN ITS OWN RANKS, AND EXTERNALLY. WHILE WE HAVE BEEN MAKING STRIDES THROUGH THE WORK OF THE NATIONAL TRAVEL AND TOURISM AWARENESS COUNCIL AND NATIONAL TOURISM WEEK, THERE IS MUCH MORE TO BE DONE TO POSITION THE TRAVEL AND TOURISM INDUSTRY WHERE IT BELONGS WITH APPROPRIATE RECOGNITION FOR ITS TREMENDOUS ECONOMIC CONTRIBUTION.

RECENT PERFORMANCE OF THE INBOUND MARKET IS CERTAINLY HELPING IN THIS EFFORT. THIS NATION ACHIEVED A VERY SIGNIFICANT MILESTONE IN 1989. THE U.S. ENJOYED A

TRAVEL SURPLUS, AS FOREIGNERS SPENT MORE MONEY VISITING THE U.S. THAN U.S. CITIZENS SPENT TRAVELING ABROAD. GLOBALLY, TOURISM IS BOOMING, AND WE'RE DOING OUR BEST TO INCREASE OUR MARKET SHARE OF THESE VALUABLE TRAVELERS AS THE WORLD'S DESTINATIONS BECOME MORE AND MORE COMPETITIVE. AND I AM PROUD TO SAY, WE ARE SUCCEEDING. THE U.S. SHARE CONTINUES TO GROW.

IN 1989, 38 MILLION VISITORS CAME TO THE U.S. AND SPENT A RECORD $43 BILLION. THIS MADE TOURISM OUR LARGEST EXPORT ITEM, SURPASSING EVEN AGRICULTURAL EXPORTS, WHICH TOTALED $40.6 BILLION. IN 1990, U.S. EXPORT INCOME THROUGH TRADE IN TOURISM IS ANTICIPATED TO GROW TO OVER $48 BILLION. FURTHER, USTTA IS FORECASTING THAT U.S. RECEIPTS FROM TRADE IN TOURISM IN 1991 WILL REACH $54 BILLION. BY THE YEAR 2000, INBOUND TOURISM WILL NEARLY DOUBLE TO 67 MILLION VISITORS OR 13% OF ALL INTERNATIONAL TRAVELERS GOING ANYWHERE. BY THE TURN OF THE CENTURY, THESE VISITORS WILL CONTRIBUTE AROUND $89 BILLION (IN 1989 DOLLARS) TO THE U.S. ECONOMY.

THE U.S. CURRENT ACCOUNT IN TRADE IN TOURISM, WHICH DECLINED FROM A DEFICIT OF $9.4 BILLION IN 1985, SHOWED AN ESTIMATED SURPLUS OF $450 MILLION IN 1989. WE EXPECT THIS SURPLUS WILL GROW TO A PROJECTED $1.5 BILLION IN 1990, AND FURTHER IMPROVE IN THE YEARS TO COME.

THE UNITED STATES' SHARE OF THE INTERNATIONAL TOURISM MARKET, WHICH GREW FROM 13.9 PERCENT IN 1987 TO

16.4 PERCENT IN 1989, WILL APPROACH 17 PERCENT IN 1990. OUR SHARE OF WORLD TOURISM EARNINGS COULD HIT 21 PERCENT BY THE END OF THIS DECADE.

FEDERAL, STATE, AND LOCAL TAX REVENUE GENERATED THROUGH INTERNATIONAL TRADE IN TOURISM SHOULD REACH APPROXIMATELY $4.5 BILLION THIS YEAR UP FROM $4 BILLION IN 1989. OF THIS AMOUNT, OVER $2 BILLION WILL FLOW TO THE FEDERAL GOVERNMENT. TRAVEL AND TOURISM GENERATES $172 IN TAX RECEIPTS FOR EVERY $1 APPROPRIATED BY CONGRESS TO STIMULATE U.S. EXPORT TRADE IN TOURISM.

AGENCY OVERVIEW AND REVIEW OF FY 1990 PROGRAMS

MORE THAN 170 NATIONAL GOVERNMENTS OPERATE TOURISM EXPORT PROMOTION AGENCIES AROUND THE WORLD. THESE AGENCIES COMMONLY MAINTAIN OFFICES AND PERSONNEL IN MAJOR OUTBOUND FOREIGN MARKETS IN AN EFFORT TO STIMULATE TOURISM EXPORT RECEIPTS FOR THEIR COUNTRIES AND INCREASE THEIR COUNTRIES' SHARE OF THE INTERNATIONAL TRAVEL MARKET.

THE SERVICES PERFORMED BY THESE AGENCIES, THROUGH THEIR HEADQUARTERS STAFFS AND THEIR FOREIGN MARKET OFFICES, ARE DETERMINED PARTIALLY IN RESPONSE TO PUBLIC DEMAND AND EXPECTATION, AND PARTIALLY IN RESPONSE TO COMPETITION FROM OTHER NATIONAL GOVERNMENTS.

USTTA OPERATES REGIONAL OFFICES IN CANADA, MEXICO, THE UNITED KINGDOM, FRANCE, THE FEDERAL REPUBLIC OF

GERMANY, THE NETHERLANDS, ITALY, JAPAN, AND AUSTRALIA. USTTA ALSO MAINTAINS AN OFFICE IN MIAMI TO SERVICE FIVE KEY SOUTH AMERICAN MARKET COUNTRIES, AND THE AGENCY IS REPRESENTED IN 11 OTHER SECONDARY MARKETS BY THE COMMERCE DEPARTMENT'S U.S. AND FOREIGN COMMERCIAL SERVICE. IN ADDITION, USTTA MAINTAINS AN INTERNATIONAL CONGRESS OFFICE IN PARIS.

EACH OF USTTA'S REGIONAL OFFICES AND SPECIAL MARKET REPRESENTATIVES ARE:

* CATALYSTS FOR COOPERATIVE TRADE DEVELOPMENT PROGRAMS WHICH BRING TOGETHER COMPETING U.S. COMPANIES TO JOINTLY MARKET THE UNITED STATES AS A TRAVEL DESTINATION IN THE FOREIGN MARKET;

* IMPARTIAL SOURCES OF INFORMATION FOR FOREIGN CONSUMERS AND THE TRAVEL TRADE;

* FACILITATORS FOR "NEW-TO-MARKET" COMPANIES SEEKING BUSINESS OPPORTUNITIES ABROAD; AND

* EDUCATORS TO THE FOREIGN MARKET DISTRIBUTION SYSTEM.

THIS YEAR WE HAVE SEEN MAJOR ACCOMPLISHMENTS, BUT WE HAVE A LOT MORE TO DO. THE USTTA AGENDA FOR 1990 INCLUDES THE FOLLOWING:

1. FIRST, WE WILL CONTINUE TO WORK WITH CONGRESS TOWARD ENACTMENT OF THE TOURISM POLICY AND EXPORT PROMOTION ACT OF 1990. THIS ACT WILL AMEND THE INTERNATIONAL TRAVEL ACT OF 1961 TO BRING OUR NATIONAL TOURISM POLICY AND USTTA'S GOALS UP-TO-DATE. THE TOURISM INDUSTRY HAS CHANGED DRAMATICALLY SINCE THE LAST TIME THE ACT WAS AMENDED IN 1981 WITH PASSAGE OF THE NATIONAL TOURISM POLICY ACT. THE INCREASING GLOBAL NATURE OF THE U.S. TRAVEL AND TOURISM INDUSTRY AND ITS IMPORTANCE TO OUR BALANCE OF TRADE NEEDS TO BE BETTER REFLECTED IN THE INTERNATIONAL TRAVEL ACT.

2. SECOND, THE VISA WAIVER PROGRAM HAS BEEN A TREMENDOUS SUCCESS. IN JAPAN ALONE, 60% OF ALL VISITORS WHO CAME TO THE U.S. WERE WITHOUT A VISA DURING THE FIRST TEN MONTHS OF 1989. DURING THE SAME PERIOD, 34% OF ALL VISITORS FROM THE UNITED KINGDOM TOOK ADVANTAGE OF THE PROGRAM. THERE ARE NOW EIGHT COUNTRIES PARTICIPATING AND WE HOPE THAT PARTICIPATION WILL CONTINUE TO INCREASE. THE DEPARTMENT OF STATE AND DEPARTMENT OF JUSTICE ARE PREPARING A REPORT ON THE PROGRAM TO BE SENT TO CONGRESS IN MAY OR JUNE. THIS REPORT WILL MAKE RECOMMENDATIONS AS TO WHETHER THE PROGRAM SHOULD BE BOTH PERMANENT AND EXPANDED TO INCLUDE ADDITIONAL COUNTRIES.

3. USTTA IS WORKING WITH THE TRAVEL INDUSTRY ASSOCIATION OF AMERICA (TIA) ON A VISIT USA TRADE FAIR SIMILAR TO POW WOW TO BE HELD IN EUROPE. THE IDEA IS TO PROVIDE AN OPPORTUNITY TO SHOWCASE THE U.S., AS A WHOLE, WITHOUT THE COMPETITION OF OTHER DESTINATIONS. THIS WOULD ALSO ALLOW SMALLER U.S. DESTINATIONS AND COMPANIES TO PARTICIPATE IN AN OVERSEAS SHOW WHICH THEY MIGHT OTHERWISE NOT BE ABLE TO DO. LIKE POW WOW, THE SHOW ORGANIZERS WILL MATCH SUPPLIERS WITH PURCHASERS BY COMPUTERIZED APPOINTMENTS TO MAXIMIZE THE PARTICIPANT'S TIME.

4. USTTA WILL ALSO BE SPONSORING A SERIES OF REGIONAL CONFERENCES AND WORKING-WITH TIA ON JOINTLY SPONSORED INTERNATIONAL TOURISM CONFERENCES THROUGHOUT THE U.S. TO ENCOURAGE DESTINATIONS TO AGGRESSIVELY PURSUE THE LUCRATIVE FOREIGN VISITOR MARKET. THIS WILL SUPPORT A RURAL TOURISM EFFORT AND, IN ADDITION, HELP DESTINATIONS AND ATTRACTIONS LEARN HOW TO DO BUSINESS IN THE FOREIGN MARKETPLACE.

5. EFFORTS IN PRIVATE/PUBLIC SECTOR COOPERATION WILL CONTINUE. ONE OF OUR MOST SUCCESSFUL PROGRAMS HAS BEEN THE USA INFORMATION CENTER IN LONDON IN PARTNERSHIP WITH AT&T. OTHERS INCLUDE SPECIAL ADVERTISING SUPPLEMENTS IN FOREIGN PUBLICATIONS, TRADE SHOW PARTICIPATION, AND COOPERATIVE TELEVISION ADVERTISING CAMPAIGNS SELLING THE U.S. AS A TRAVEL DESTINATION. ANOTHER EXAMPLE IS THE

Department of Commerce
United States Travel and Tourism Administration
Salaries and Expenses

CONSULTING AND RELATED SERVICES
(Obligations in thousands of dollars)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting services	67	26	0
Management and professional services	0	0	0
Special studies and analysis	0	0	0
Management and support services for research and development	0	0	0
	67	26	0

In FY 1990, USTTA required consulting services to finish the Rural Tourism Study and work related to World Tourism Organization issues.

In FY 1991, USTTA does not anticipate any costs for consultants and related services.

Department of Commerce
United States Travel and Tourism Administration
Salaries and Expenses

PERIODICALS, PAMPHLETS, AND AUDIOVISUAL PRODUCTS
(Obligations in thousands of dollars)

	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Periodicals....................................	0	0	0	0
Pamphlets......................................	206	400	313	332
Audiovisuals...................................	0	0	0	0
Total..	206	400	313	332

In FY 1988, for the first time USTTA enlisted financial support from private sector companies in the form of advertising in the USTTA Holiday Planner to enable reprinting of the publication in seven languages.

In FY 1989, USTTA reprinted the six most popular regional travel folders.

In FY 1990 and FY 1991, USTTA will enlist the services of a contractor to develop and design a new series of regional travel folders for use in travel marketing programs abroad.

STATE OF FLORIDA'S CAMPAIGN IN JAPAN THROUGH USTTA'S TOKYO OFFICE. JAPAN'S LARGEST TOUR WHOLESALER, JAPAN TRAVEL BUREAU, WORKED WITH USTTA AND THE STATE OF FLORIDA TO PROMOTE MORE TRAVEL TO ALL AREAS OF THE STATE. SO FAR THERE HAVE BEEN MORE THAN 1000 INCREMENTAL BOOKINGS VALUED AT $2.3 MILLION DOLLARS IN REVENUES TO FLORIDA. THIS KIND OF PLANNING AND COOPERATION CAN BRING MILLIONS OF NEW DOLLARS TO A VARIETY OF DESTINATIONS IN THE U.S.

6. FINALLY, USTTA IS TAKING A LEADERSHIP ROLE IN THE SERIOUS EMPLOYMENT CRISIS OF TOO MANY JOBS AND NOT ENOUGH EMPLOYEES FACING THE TRAVEL AND TOURISM INDUSTRY. IN MANY INSTANCES EACH SEGMENT IS DOING SOMETHING TO COUNTERACT THIS SITUATION, BUT NO ONE IS SPEAKING FOR THE COLLECTIVE INDUSTRY. CONSEQUENTLY, USTTA WILL BE DEVELOPING A HANDBOOK ON CAREERS IN THE TOURISM INDUSTRY. IT WILL CONTAIN A DESCRIPTION OF TASKS AND PREFERRED SKILLS OR EDUCATIONAL REQUIREMENTS AND LIST SOURCES OF FURTHER INFORMATION FOR ALL JOBS IN THIS INDUSTRY. IT WILL ALSO HAVE SPECIAL SECTIONS DEVOTED TO JOBS FOR MINORITIES, HANDICAPPED PERSONS, SENIORS CITIZENS, AND YOUTHS.

FY 1991 PROGRAM

WITH THE REQUESTED FY 1991 APPROPRIATION, USTTA PROPOSES TO:

1. DEVELOP AND IMPLEMENT INTEGRATED, COOPERATIVE TRAVEL EXPORT PROMOTION AND TRADE SUPPORT PROGRAMS IN NINE PRIMARY AND 16 SPECIAL MARKET COUNTRIES ABROAD;

2. CONDUCT REGIONAL, STATE AND LOCAL TOURISM MARKET PLANNING AND PRODUCT DEVELOPMENT SEMINARS;

3. COORDINATE THE FEDERAL GOVERNMENT'S ROLE IN SUPPORTING AND MARKETING MAJOR INTERNATIONAL EVENTS HELD IN THE UNITED STATES WHICH WILL HAVE A SIGNIFICANT IMPACT ON AMERICA'S EXPORT EARNINGS THROUGH TRADE IN TOURISM;

4. COLLECT, ANALYZE AND DISSEMINATE ACCURATE AND TIMELY ECONOMIC, DEMOGRAPHIC, AND CONSUMER BEHAVIOR DATA ON AMERICA'S FOREIGN TRAVEL MARKETS;

5. IDENTIFY AND ATTACK FOREIGN AND DOMESTIC IMPEDIMENTS TO INTERNATIONAL TRADE IN TOURISM THROUGH LEGISLATION, BILATERAL AND MULTILATERAL NEGOTIATIONS; AND COORDINATE NATIONAL TOURISM POLICY THROUGH THE COMMERCE SECRETARY'S TOURISM POLICY COUNCIL AND THE TRAVEL AND TOURISM ADVISORY BOARD.

COOPERATIVE EXPORT PROMOTION AND TRADE SUPPORT PROGRAMS

IN FY 1991, USTTA WILL SEEK THE PARTICIPATION OF MORE THAN 4,000 PUBLIC AND PRIVATE SECTOR COOPERATIVE

PARTNERS WHO WILL INVEST NEARLY $17 MILLION IN EFFORTS TO STIMULATE EXPORT TRADE IN TOURISM TO THE UNITED STATES, ESPECIALLY ITS LESSER-KNOWN DESTINATIONS.

AMONG THE COOPERATIVE PROGRAMS PLANNED FOR FY 1991 ARE PRINT AND TELEVISION ADVERTISING CAMPAIGNS, JOURNALIST AND TRAVEL TRADE PRODUCT INSPECTION TOURS, MARKET DEVELOPMENT MISSIONS, TRAVEL TRADE SHOWS AND OTHER EXPORT PROMOTION ACTIVITIES.

AS IT HAS IN PREVIOUS YEARS, USTTA WILL CONTINUE CONDUCTING WORKSHOPS AND TRAINING PROGRAMS FOR FOREIGN TRAVEL SELLERS IN EACH OF AMERICA'S PRIMARY AND SECONDARY MARKETS. THESE SELLERS ARE THE DISTRIBUTION SYSTEM FOR INTERNATIONAL TRAVEL PRODUCTS AND SERVICES. WITHOUT USTTA'S TECHNICAL GUIDANCE AND INFORMATIONAL ASSISTANCE, THESE AGENTS AND TOUR BROKERS CAN NOT EFFECTIVELY SELL AMERICAN DESTINATIONS TO THEIR CLIENTS. ALTERNATIVELY, THEY SELL COMPETING DESTINATIONS WITH WHICH THEY ARE MORE FAMILIAR.

WE RECOMMEND REDUCING COOPERATIVE EXPORT PROMOTION AND TRADE SUPPORT PROGRAMS BY $411,000. IT IS ANTICIPATED THAT USTTA WILL GENERATE LARGER RETURNS OF PRIVATE FUNDING FOR EVERY USTTA DOLLAR. THEREFORE, USTTA WILL REQUIRE LESS COOPERATIVE CONSUMER ADVERTISING FUNDING BASED ON THE EXPECTED RETURNS.

REGIONAL, STATE AND LOCAL MARKET PLANNING SEMINARS

AMERICA'S BIGGEST CHALLENGE TO REDUCING ITS TRADE DEFICIT LIES IN ITS ABILITY TO PERSUADE MORE AMERICAN COMPANIES TO EXPORT THEIR PRODUCTS AND SERVICES. BECAUSE 90 PERCENT OF THE AMERICAN TRAVEL INDUSTRY'S BUSINESS IS CURRENTLY DOMESTIC, U.S. TRAVEL COMPANIES OFTEN OVERLOOK THE OPPORTUNITIES AVAILABLE IN THE FOREIGN MARKET. THE FACTS ARE THAT:

1. INTERNATIONAL TRAVEL IN TOURISM IS GROWING ALMOST FOUR TIMES FASTER THAN DOMESTIC TOURISM -- 11 PERCENT PER YEAR VERSUS 3 PERCENT FOR THE DOMESTIC MARKET;

2. FOREIGN TRAVELERS SPEND ON AVERAGE SEVEN TIMES MORE THAN THEIR DOMESTIC COUNTERPARTS--$1,900 PER PERSON VISIT VERSUS $254 PER DOMESTIC AMERICAN TRAVELER PER VISIT; AND

3. FOREIGN TRAVELERS TAKE LONGER TRIPS, VISIT MORE PLACES, AND USE COMMERCIAL LODGING AND RENTAL CARS MORE FREQUENTLY THAN THEIR DOMESTIC COUNTERPARTS.

TO ENSURE THAT AMERICAN TRAVEL COMPANIES LEARN ABOUT THE ECONOMIC OPPORTUNITIES OF INTERNATIONAL TRADE IN TOURISM, AND HOW TO BE COMPETITIVE IN THE INTERNATIONAL MARKETPLACE, USTTA WILL HOLD ITS ANNUAL INTERNATIONAL TOURISM CONFERENCE AND AT LEAST SIX REGIONAL MARKET PLANNING SEMINARS IN FY 1991.

DURING THESE PROGRAMS, USTTA STAFF WILL WORK WITH PARTICIPATING INDUSTRY REPRESENTATIVES TO IDENTIFY COMPETITIVE TRAVEL PRODUCTS AND SERVICES AND DEVELOP MARKETING PLANS TO INTRODUCE THOSE PRODUCTS AND SERVICES TO THE INTERNATIONAL MARKET.

BECAUSE INCREASING NUMBERS OF FOREIGN VISITORS TO THE UNITED STATES ARE REPEAT VISITORS, AND BECAUSE U.S. EXPORT TRADE IN TOURISM AFFORDS ONE OF THE BEST POTENTIALS FOR ECONOMIC REVITALIZATION, USTTA WILL WORK CLOSELY WITH THE "LESSER-KNOWN" U.S. DESTINATIONS AND ATTRACTIONS -- THE NORTHWEST, THE GREAT LAKES REGION, AND THE STATES IN MIDDLE AMERICA -- TO ENSURE THAT THEIR TRAVEL PRODUCTS AND SERVICES ARE REPRESENTED IN THE FOREIGN MARKETPLACE.

COORDINATE PUBLIC SECTOR ROLE IN INTERNATIONAL EVENTS

THE U.S. HAS A UNIQUE OPPORTUNITY IN THE 90'S TO ATTRACT A NUMBER OF FOREIGN VISITORS LOOKING FOR ADVENTURE, DISCOVERY AND EDUCATION. 1992 IS THE 500TH ANNIVERSARY OF COLUMBUS' DISCOVERY OF AMERICA. 1994 IS THE YEAR THAT THE U.S. WILL HOST WORLD CUP SOCCER.

THE WORLD SOCCER CUP GAMES ARE EXPECTED TO BRING 1.5 MILLION VISITORS TO OUR SHORES WHO WILL SPEND $1.5 BILLION ON FOOD, LODGING, ENTERTAINMENT AND AMERICAN MERCHANDISE. BOTH EVENTS PRESENT THE U.S. TRAVEL AND TOURISM INDUSTRY

WITH AN UNPRECEDENTED MARKETING OPPORTUNITY TO SHOWCASE OUR DIVERSITY, OUR CULTURE, OUR CITIES AND OUR NATIONAL PARKS, IN SHORT THE WIDE VARIETY OF ATTRACTIONS THAT NO OTHER COUNTRY HAS TO OFFER, . . . AT A REASONABLE COST.

MARKET RESEARCH AND ECONOMIC DATA

PUBLIC AND PRIVATE SECTOR MARKETING AND POLICY PLANNERS RELY ON USTTA RESEARCH DATA TO TARGET FOREIGN CONSUMER MARKETS AND TO ASSESS U.S. INDUSTRY MARKETING PROGRAM IMPACT AND EFFECTIVENESS.

THERE ARE THREE ESSENTIAL ELEMENTS IN USTTA'S FY 1991 RESEARCH PROGRAM INTENDED TO:

- ASSESS THE CONSUMER HABITS AND INTERESTS OF BOTH ACTUAL AND POTENTIAL FOREIGN VISITORS;

- TRACK THE VOLUME AND ECONOMIC IMPACT OF FOREIGN VISITORS TO THE UNITED STATES;

- EVALUATE THE IMPACT OF USTTA'S PRIVATE/PUBLIC SECTOR COOPERATIVE EXPORT PROMOTION INITIATIVES.

LET ME SAY HERE THAT OUR REPORTING METHODS ARE FAR MORE ACCURATE THAN IN YEARS PAST AS THEY ARE NOW BASED ON OUR IN-FLIGHT SURVEYS GIVEN TO PASSENGERS AS THEY LEAVE

THE COUNTRY. WHILE WE FEEL OUR RESEARCH IN THIS AREA CAN STILL BE IMPROVED, IT IS BETTER NOW THAN EVER BEFORE. THIS IS A MAJOR ACCOMPLISHMENT TOWARDS THE INDUSTRY RECEIVING RECOGNITION FOR ITS ROLE IN THE U.S. ECONOMY.

ALONG THE SAME LINES, USTTA IS WORKING WITH THE OFFICE OF ECONOMIC AFFAIRS TO IMPROVE THE QUALITY AND SCOPE OF SERVICE INDUSTRY STATISTICS, PARTICULARLY TRADE-IN-SERVICES DATA. MUCH OF THE GOVERNMENT'S STATISTICAL PROGRAMS STILL REFLECT THE COUNTRY'S ECONOMIC BASE AS IT WAS FORTY OR FIFTY YEARS AGO, WHEN IT WAS MANUFACTURING DRIVEN. THE SERVICES SECTOR NOW REPRESENTS 60% OF THE U.S. GNP. PRESIDENT BUSH HAS IDENTIFIED THE IMPROVEMENT OF SERVICE SECTOR STATISTICS AS ONE OF HIS LONG-TERM GOALS, AND HAS RECOMMENDED THAT THE PROCESS FOR CHANGE BEGIN IMMEDIATELY. OUR GOAL, IS TO HAVE SERVICE SECTOR INFORMATION COLLECTED AND DISSEMINATED SIMILAR TO THE WAY MANUFACTURING FIGURES ARE CURRENTLY REPORTED. WHILE REPORTS ON THE TRADE DEFICIT AND MANUFACTURED GOODS ARE WELL PUBLICIZED, SERVICE SECTOR FIGURES RELEASED QUARTERLY ARE OFTEN GIVEN LITTLE ATTENTION. USTTA IS MAKING THIS EFFORT A KEY PRIORITY -- TO ATTAIN FULL ECONOMIC RECOGNITION FOR THE SERVICES INDUSTRIES,OF WHICH TRAVEL AND TOURISM IS A LARGE PART, AND ENSURE THAT OUR REPORTING METHODS ACCURATELY REFLECT THE U.S. ECONOMY OF THE 90'S.

TRADE POLICY AND IMPEDIMENTS TO INTERNATIONAL TOURISM

USTTA'S TOURISM TRADE POLICY PROGRAM IS COORDINATED WITH THE COMMERCE SECRETARY'S TRAVEL AND TOURISM ADVISORY BOARD AND THE TOURISM POLICY COUNCIL. THE PROGRAM IDENTIFIES FOREIGN GOVERNMENT IMPOSED IMPEDIMENTS TO INTERNATIONAL TRAVEL, AND DEVELOPS AND IMPLEMENTS POLICY INITIATIVES DESIGNED TO ELIMINATE OR REDUCE THESE TRADE IN TOURISM BARRIERS. IMPLEMENTATION OF ESTABLISHED POLICIES IS ACCOMPLISHED IN COOPERATION WITH THE TRAVEL INDUSTRY, OTHER GOVERNMENT POLICY OFFICES, INTER-GOVERNMENTAL BODIES, AND INTERNATIONAL ORGANIZATIONS.

IN FY 1991, USTTA WILL CONTINUE ADDRESSING :

THE AMERICAN TRAVEL INDUSTRY'S INTERESTS AS THEY RELATE TO THE UNIFICATION OF THE EUROPEAN COMMUNITY;

THE INCLUSION OF TRADE IN TOURISM SERVICES IN GATT;

THE NEED FOR BILATERAL TOURISM ARRANGEMENTS; AND

THE INCLUSION OF TOURISM POLICY WITHIN THE BILATERAL CIVIL AVIATION NEGOTIATIONS; AND

OTHER TRADE POLICY INITIATIVES UNDERTAKEN BY THE FEDERAL GOVERNMENT AND THE DEPARTMENT OF COMMERCE WHICH MAY HAVE AN IMPACT ON THE AMERICAN TRAVEL INDUSTRY.

USTTA FOREIGN SERVICE

IN CONJUNCTION WITH USTTA'S TRADE POLICY INITIATIVES, THE AGENCY CONVERTED ITS AMERICAN PERSONNEL LOCATED OUTSIDE THE UNITED STATES TO THE UNITED STATES FOREIGN SERVICE. THE AGENCY'S PERSONNEL HAVE NOW BEEN SWORN IN TO THE USTTA FOREIGN SERVICE.

IN FY 1991 USTTA WILL CONTINUE TO DEVELOP OPERATIONAL GUIDELINES FOR ITS FOREIGN SERVICE PROGRAM. A SPECIFIC PERSONNEL PLAN IS BEING DEVELOPED FOR ROTATING AND EDUCATING USTTA'S FOREIGN SERVICE OFFICERS, FOR INTEGRATING USTTA'S FOREIGN SERVICE PERSONNEL INTO THE AMERICAN DIPLOMATIC COMMUNITY, AND FOR SEEKING HOST COUNTRY DIPLOMATIC RECOGNITION OF USTTA FOREIGN SERVICE OFFICERS.

MULTILINGUAL RECEPTIONISTS PROGRAM

THIS COOPERATIVE PROGRAM HAS BEEN SUPPORTED IN PREVIOUS YEARS BY USTTA, THE U.S. DEPARTMENT OF EDUCATION, AIRPORTS, CITIES, AND COUNTRY AUTHORITIES. USTTA'S PORTION OF FUNDING HAS BEEN ABOUT 16 PERCENT OF THE PROGRAM'S TOTAL COST.

THE MULTILINGUAL RECEPTIONIST PROGRAM NOW OPERATES AT 12 MAJOR U.S. AIRPORTS, PROVIDING ASSISTANCE AND

INTERPRETATION SERVICES TO NON-ENGLISH SPEAKING INTERNATIONAL VISITORS. THE RECEPTIONISTS ARE STATIONED IN FEDERAL INSPECTION AREAS AND WORK CLOSELY WITH THE IMMIGRATION AND NATURALIZATION SERVICE, THE CUSTOMS SERVICE AND THE DEPARTMENT OF AGRICULTURE TO EXPEDITE THE ENTRY OF FOREIGN VISITORS.

FUNDING FOR THIS ACTIVITY, IN THE AMOUNT OF $240,000, IS PROVIDED IN THE ADMINISTRATION'S FY 1991 BUDGET FOR USTTA.

EC, THE PACIFIC AND EASTERN EUROPE

WHILE TOURISM GAINS RECOGNITION AT HOME, MOMENTUM IS ON THE RISE ABROAD. IN THIS REGARD, THERE ARE THREE SIGNIFICANT AREAS I WANT TO CALL TO YOUR ATTENTION: THE EUROPEAN ECONOMIC COMMUNITY, THE PACIFIC AREA, AND EASTERN EUROPE.

YOU ARE ALL FAMILIAR WITH EC92 OR THE UNIFICATION OF THE EUROPEAN ECONOMIC COMMUNITY IN 1992. IF THEY ARE SUCCESSFUL IN THEIR EFFORTS FOR UNIFICATION, THE EC WILL REPRESENT ONE OF THE LARGEST FREE TRADE AREAS IN THE WORLD, WITH A POPULATION OF 325 MILLION AND A GNP OF 3.6 TRILLION.

LET US LOOK TO SEE WHAT THIS MEANS TO U.S. TRAVEL AND TOURISM INDUSTRY COMPONENTS. LET ME GIVE YOU ONE EXAMPLE: THE EC IS CONSIDERING ALLOWING A HIGHER DUTY ALLOWANCE FOR RETURNING RESIDENTS IF THEY TRAVEL TO AN EC COUNTRY. IN OTHER WORDS, IT WILL COST A BRITISH RESIDENT MORE TO SPEND MONEY IN THE U.S. THAN IN FRANCE SINCE THEY WILL BE TAXED A LOWER AMOUNT IF THEY TRAVEL TO FRANCE.

THAT WAS THE BAD NEWS, . . . THE GOOD NEWS IS THAT USTTA AND THE ECONOMIC COMMUNITY HAVE AGREED TO HIGH-LEVEL DISCUSSIONS OF IMPORTANT TOURISM ISSUES.

ANOTHER AREA OF GREAT INTEREST IS THE FORMATION OF THE ASIA PACIFIC ECONOMIC COUNCIL COMPRISED OF CANADA, THE U.S., JAPAN, AUSTRALIA, NEW ZEALAND, THE PHILIPPINES, SINGAPORE, THAILAND, INDONESIA, MALAYSIA, BRUNEI AND SOUTH KOREA. THIS AREA, EXCLUDING THE U.S., HAS A POPULATION OF 468 MILLION AND A GNP OF 4 TRILLION. THESE TWELVE COUNTRIES RECENTLY MET TO DISCUSS COOPERATION IN THREE DIFFERENT AREAS: TOURISM, TELECOMMUNICATIONS AND TRANSPORTATION.

THESE COUNTRIES HAVE RECOGNIZED THE ROLE TOURISM HAS ALREADY PLAYED IN FACILITATING THE DEVELOPMENT OF IMPORTANT INFRASTRUCTURE -- WATER, POWER, SEWERS, ROADS -- ALL OF WHICH ARE NECESSARY FOR TRAVEL. FOREIGN INVESTMENT IN HOTELS AND THE TRANSFER OF TECHNOLOGY THROUGH AIRLINE

AND HOTEL RESERVATION SYSTEMS HAVE ALREADY BENEFITED DEVELOPING NATIONS. THE ECONOMIC BENEFITS OF TOURISM HAVE BEEN RECOGNIZED AND ARE BEING ACTIVELY PURSUED.

IN THESE TWO MOST IMPORTANT MARKET AREAS, EUROPE AND THE PACIFIC, USTTA HAS TAKEN AN ACTIVE ROLE TO REPRESENT OUR DOMESTIC INDUSTRY. WE ARE DISCUSSING TOURISM ISSUES AT THE GOVERNMENTAL LEVEL IN BOTH OF THESE HUGE NEW COMMUNITIES, SEPARATE FROM OTHER TRADE MATTERS. IN ADDITION, THE CHANGES IN EASTERN EUROPE HAVE OPENED UP TREMENDOUS OPPORTUNITIES FOR ALL OF US. INCLUDING RUSSIA, THIS AREA HAS A POPULATION OF 403 MILLION AND GNP OF $2.7 TRILLION. TOURISM CAN SPUR ECONOMIC GROWTH IN THOSE NATIONS, AND MANY OF THEIR RESIDENTS ARE CURIOUS TO DISCOVER AMERICA.

AS WE LOOK INTO THE FUTURE, WE CAN SEE MANY NEW OPPORTUNITIES FOR OUR INDUSTRY. WE ARE VERY FORTUNATE TO LIVE IN AN ERA OF REDUCED POLITICAL TENSIONS WORLDWIDE WHICH SHOULD ENHANCE INTERNATIONAL TRAVEL GLOBALLY. WE PREDICT THAT "SOFT ADVENTURE" TRAVEL LIKE RAFTING TRIPS, RV TRIPS TO THE NATIONAL PARKS, DUDE RANCHES, AND LUXURY RESORTS WILL ALL BENEFIT FROM THESE TRAVELERS. THE EDUCATIONAL COMPONENT TO TRAVEL WILL ALSO BE IMPORTANT -- THE KEY WORDS ARE "DISCOVERING" AND "LEARNING".

MR. CHAIRMAN, THAT CONCLUDES MY TESTIMONY. I WOULD BE PLEASED TO ANSWER THE COMMITTEE'S QUESTIONS.

Mr. **Early**. Fine. That is a summary of your statement so we will include in the record your entire statement.

Mr. **Schnabel**. Thank you, sir.

1990 SEQUESTER

Mr. **Early**. Now, what was the amount sequestered from the 1990 appropriation, and what was the impact on the activities of your agency as a result of the sequestration?

Mr. **Schnabel**. It was $178,000. And the actual number that we ended up with was greater than what we had been budgeted for. So, in effect, it did not have an impact on the operation.

BUDGET REQUEST TO OMB

Mr. **Early**. What did you request OMB for this 1991 budget?

Mr. **Schnabel**. We requested $17,707,000.

Mr. **Early**. Provide for the record where the reductions were taken.

Mr. **Schnabel**. Yes, we will.

[The information follows:]

Budget Request to OMB

The USTTA FY 1991 budget request to OMB was $17,707,000. USTTA's request to Congress is $14,362,000. The reductions total $3,345,000 and 16 full-time equivalents. These reductions are summarized as follows:

Items		Amount
Japan/Far East Tourism trade development initiatives		$1,800,000
Includes new office in Korea	−$750,000	
Cooperative programs in Australia	−230,000	
Expanded activities in Japan	−820,000	
Expanded research programs		−651,000
Improvements to in-flight survey	−400,000	
I-92 statistics on incoming foreign visitors	−182,000	
Research survey	−69,000	
Industry Outreach Program		−414,000
Cooperative trade development programs with U.S. regions		
New USTTA office in Belgium		−240,000
Expand multilingual receptionist program		−240,000
Total		−$3,345,000

AUTHORIZING LEGISLATION

Mr. **Early**. What is the status of your authorizing legislation for fiscal year 1991?

Mr. **Schnabel**. As I understand it, the House is planning to have hearings on an authorization bill sometime this year. At the moment, it is not authorized.

We have been working with the Senate on a bill that would be a new tourism export promotion bill. We are discussing it with the staff at the moment. A lot of the points in that bill I understand could also be proposed in the House bill. We basically are in support of ~~that~~ legislation; however, we are still discussing certain points.

Mr. Early. Well, this is the third year for the fee proposal. Why should we anticipate anything different than what has happened in the past?

Mr. Schnabel. The difference this year is that we are requesting a direct appropriation for the first time in several years. So the agency will be in business with the $14.3 million if that is what it gets, without there being a direct link with the fee.

The Administration is also going to propose a fee, with the funds from that to go to the general account to reduce the deficit.

Mr. Early. And how much do you anticipate you could collect from this fee?

Mr. Schnabel. Mr. Chairman, approximately $22.8 million.

Mr. Early. So it would be more than you were appropriated?

Mr. Schnabel. Yes, sir.

Mr. Early. I understand that that approach was unacceptable to the travel industry in the past.

Do you expect it to be accepted by them this year and why?

Mr. Schnabel. The travel industry has not been in favor of it in the past. I think the travel industry is quite happy that the agency, for the first time in a long time, is requesting an appropriation. And what they will do regarding the proposed fee, I don't know. But I do know that it is the intention to propose a separate fee.

Mr. Early. Okay. And so the Administration is going to propose separate legislation?

Mr. Schnabel. Yes, sir.

Mr. Early. Fine. Why don't you, for the record, provide us with the status of that proposal and what the principal features are.

Mr. Schnabel. Yes, sir.

[The information follows:]

STATUS AND FEATURES OF FEE BILL

In the very near future, the Secretary of Commerce will transmit to the Congress draft legislation requiring the Secretary of the Treasury, on a calendar quarterly basis, to charge and collect from each commercial airline and passenger ship line transporting passengers to the United States, a USTTA facilitation fee.

The commercial airlines and passenger ship lines which carry passengers to and from the United States receive a direct financial benefit from the activities of USTTA and, consistent with the Bush Administration's user fee policy, would be assessed fees to pay the costs of those activities.

The fee charged each airline and passenger ship line each calendar quarter would be the amount equal to one dollar multiplied by the number of passengers arriving at United States ports of entry from foreign countries, possessions, or territories aboard commercial aircraft or passenger ships of that airline or passenger ship line during that calendar quarter that are also required to pay a customs inspection fee.

The provisions of this proposed legislation requiring the Secretary of the Treasury to impose this fee and governing its collection and enforcement are modeled upon, and in most respects are substantially identical to, the provisions of the Consolidated Omnibus Budget Reconciliation Act of 1985 which require the Secretary of the Treasury, among other things, to impose on persons arriving at United States ports of entry aboard a commercial aircraft or passenger ship a customs inspection fee of five dollars. Those who issue or sell such a person the applicable ticket of passage are required to collect the customs inspection fee and remit it to the Secretary of the Treasury. (19 U.S.C. § 58c.)

Unlike the customs inspection fee, the airlines and passenger ship lines instead of the passengers would be charged the USTTA facilitation fee. This is because the direct financial beneficiaries of USTTA's activities are the airlines and passenger ship lines and not the passengers, only some of whom receive secondary benefits.

The reason why the USTTA facilitation fee charged each airline and ship line would be based only on the number of their arriving passengers who are required to pay the customs inspection fee instead of on all of their arriving passengers is to structure a USTTA facilitation fee system with the least administrative burden on the airlines and ship lines and on the Federal Government. Rather than each airline or ship line having to keep a count of all their arrivals each quarter and multiplying by one dollar, they would be able to use the number of arrivals they presently count for determining the customs inspection fee they must remit multiplied by one dollar. In other words, the amount for the USTTA facilitation fee they must remit would be the dollar amount of the customs inspection fee they must remit divided by five.

In order to accomplish this, the proposed USTTA facilitation fee legislation excludes from being considered an arrival for purposes of determining the USTTA facilitation fee due, the same group of passengers excluded from having to pay the customs inspection fee under the Reconciliation Act. Specifically, an airline or ship line would not be charged a fee for any arrival whose journey originated in Canada, Mexico, a United States territory or possession, or any of the adjacent Caribbean islands. Likewise, no fee would be charged for a passenger whose journey originated in any of the fifty States, the District of Columbia, or Puerto Rico as long as the journey was limited to Canada, Mexico, a United States territory or possession, or one of the adjacent Caribbean islands. Finally, no fee would be charged for a passenger landing in the United States who is in immediate and continuous transit to a destination outside the United States.

In order to further minimize the administrative burden on the airlines and ship lines and on the Government, the method of collection and the time allowed for remittance to the Secretary of the Treasury for deposit in the General Fund of the United States Treasury would be the same for the USTTA facilitation fee as for the customs inspection fee.

The Secretary of the Treasury would be prohibited from charging the airlines or ship lines any USTTA facilitation fee based on passengers arriving pursuant to a ticket sold prior to the effective date of the fee section. Further, the section of the proposed legislation imposing the fee would be effective thirty days after enactment. The delay in effective date would allow a commercial airline or passenger ship line to adjust its ticket prices, if it wishes, to reflect the one dollar per passenger fee costs it would have to pay, and the prohibition with respect to prior tickets sold would enable the airlines and ship lines to pass on the fee costs to their passengers in all instances.

The proposed legislation would keep the USTTA subject to the budget request and appropriation process. Collected fee revenues will help reduce the Federal deficit.

The proposed legislation would authorize fiscal year 1991 appropriations of $14,362,000, to the Secretary of Commerce for the activities of the USTTA, and subsequent year appropriations of "such sums as may be necessary".

Mr. Early. The budget justification indicates a program reduction in the tourism export development program of $411,000. The justification states that lower priority programs in research, marketing and cooperative advertising will be reduced.

Which specific programs would be reduced?

Mr. Schnabel. It's in the marketing area, $411,000, which is the area where we do cooperative programs with States and with industry. And we hope to be able to make up that amount of money by collecting more from the private sector than we have in the past. So that our percentage will go down and the private sector in the States will pick up more.

Mr. Early. But the justifications suggested that there was a low priority in the research, and your answer was more or less it was a dollar and cents thing.

Mr. Schnabel. Well, we had to come up with the numbers from somewhere. And we felt that we could work on the private sector and make up the shortage. That had something to do with the decision to take it from those programs.

Mr. Early. All right. For the record, provide what you think that impact of that reduction would be on the U.S. tourism industry.

Mr. Schnabel. Yes, sir.

[The information follows:]

Impact of Program Reduction

It is anticipated that USTTA will generate larger returns of private funding for every USTTA dollar invested. Therefore, USTTA will require less cooperative consumer advertising funding based on the expected returns which should minimize the adverse impact of the $411,000 program reduction in the cooperative advertising program.

TRAVEL SURPLUS

Mr. Early. Now, I understand there is a surplus in the balance of payments in the area of travel and tourism.

What is it, sir?

Mr. Schnabel. For 1989, it was $450 million. I mean that is what we are projecting at the moment. And we are projecting something in excess of a billion dollars for this year, which is a substantial turnaround from what it has been over the past number of years.

Mr. Early. Mr. Secretary, one of your predecessors said that the U.S. Government could spend $100 million on promotion of travel and tourism to the United States, or we should eliminate the program entirely.

In other words, anything below $100 million was a waste of money.

What is your view?

Mr. Schnabel. Now, Mr. Chairman, I don't know who that was so I have never discussed it. But I have heard that number.

In my opinion, that sounds very grandiose, and it is the kind of money that we couldn't handle. I think what we are doing is showing that we are performing a function.

All individuals in the agency, which is very small, short of a hundred people actually, do an incredible job performing with very little money. I think $100 million would be substantially over-budgeting, and I wouldn't know what to do with it.

Mr. **Early**. You don't think you could perform that type of outreach as far as other parts of the world? You've got your budget as it is today. You're not getting to too many places. You are not really reaching out, getting the needed outreach probably.

Mr. **Schnabel**. Well, we are covering, Mr. Chairman, with the offices that we have today in the overseas markets, we are covering we think 70 percent of the marketplace out there.

I suppose with more money and more people, of course, we could do a greater and better penetration of that market. But for what we have to operate with today, I think the results are basically pretty good.

Many other countries, as you know, spend a lot more on a per capita basis. The United States, of course, is one of the number one destinations in the world. And I think that with the help of the private sector, and what we do as a catalyst with that sector, I think we are delivering.

Mr. **Early**. Mr. Schnabel, when you say we're reaching, 70 percent of the world, we are reaching it, but are we covering it? We do so much with statistics to say we've been in this country, et cetera.

I mean, I would just think am I advocating? I would just think that in tourism you really would have a lot of availability towards it then.

Mr. **Schnabel**. There is no question about it, that we could do more. $100 million, I think, is something that is probably over what we could use.

Mr. **Early**. Mr. Schnabel, I want to thank you for your testimony.

We think that there is an awful lot of potential monies and just goodwill and just everything in tourism.

I want to thank you for your testimony Mr. Schnabel. With that, we will conclude this morning's hearing and recess till 2 p.m.

WEDNESDAY, FEBRUARY 28, 1990.

ECONOMIC AND STATISTICAL ANALYSIS

WITNESSES

DR. MICHAEL R. DARBY, UNDER SECRETARY, ECONOMIC AFFAIRS

ALLAN H. YOUNG, DIRECTOR, BUREAU OF ECONOMIC ANALYSIS

B. JEROME JACKSON, DIRECTOR, OFFICE OF ADMINISTRATION

SUSANNE H. HOWARD, ASSOCIATE UNDER SECRETARY, ECONOMIC AFFAIRS

FREDERICK T. KNICKERBOCKER, EXECUTIVE DIRECTOR, ECONOMIC AFFAIRS

CLIFTON T. BECK, BUDGET OFFICER, ECONOMIC AND STATISTICAL ANALYSIS

MARK E. BROWN, DIRECTOR, OFFICE OF BUDGET

Mr. DWYER [presiding]. The Committee will come to order.

The first item that we shall consider today is the FY 1991 budget request for Economic and Statistical Analysis in the Department of Commerce. The request is for $39,940,000. This amount represents an increase of $9,040,000 above the appropriation enacted for FY 1990.

We shall insert the budget justification submitted in support of this request into the record at this point.

[The justifications follow:]

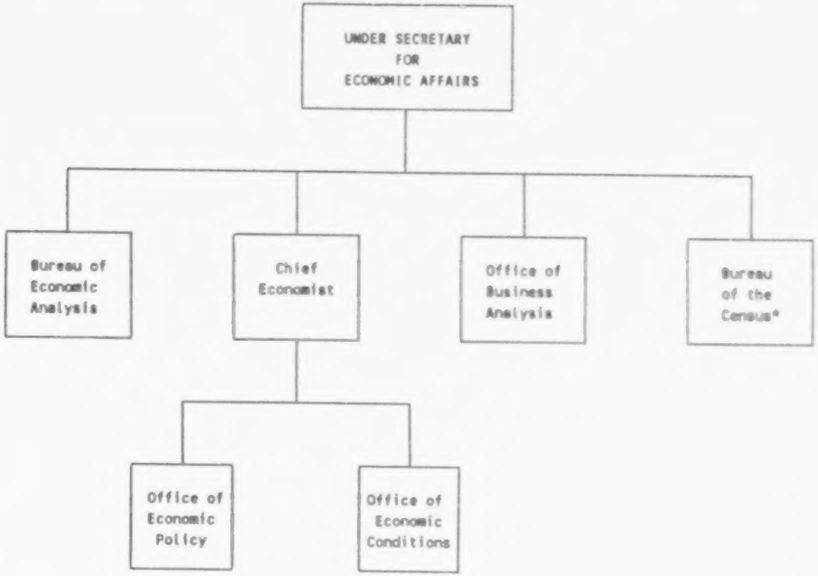
U.S. DEPARTMENT OF COMMERCE
ECONOMIC AND STATISTICAL ANALYSIS



UNDER SECRETARY FOR ECONOMIC AFFAIRS
Bureau of Economic Analysis
Chief Economist
Office of Business Analysis
Bureau of the Census*
Office of Economic Policy
Office of Economic Conditions

*The Bureau of the Census reports to the Under Secretary but is funded through separate appropriations.

General Statement

The Economic and Statistical Analysis (ESA) account consists of the Economic Analysis and the Business Analysis programs which are under the direction of the Under Secretary for Economic Affairs, and the Economic Policy and Economic Conditions programs which are under the direction of the Chief Economist for the Department of Commerce. The Under Secretary for Economic Affairs furnishes policy guidance and has overall responsibility for all ESA programs.

A comparison of the FY 1990 appropriation and the FY 1991 estimate is shown below.

(Dollar amounts in thousands)

	1990 Appropriation Currently Available		1991 Estimate		Inc.(+) or Dec.(-)		Perm. Emp. 11/30
	Perm. Pos.	Amount	Perm. Pos.	Amount	Perm. Pos.	Amount	
Salaries and expenses.	531	$30,908	627	$39,948	+96	+$9,402	443

The FY 1991 budget request for the ESA account is 634 positions and $39,948,000. This represents a increase of 96 positions and $9,402,000 from the FY 1990 appropriation of 531 positions and $30,908,000 currently available.

ECONOMIC ANALYSIS

The goal of this activity is to provide a clear picture of the U.S. economy through the preparation, development, and interpretation of the national income and product accounts, summarized by the gross national product (GNP); the wealth accounts, which show the business and other components of national wealth; the input-output accounts, which trace the interrelationships among industrial markets; personal income and related economic series by geographic area; the U.S. balance of payments accounts and associated foreign investment accounts; and measures relating to environmental change within the framework of the national economic accounts. The work on the national economic accounts is supplemented by the preparation and analysis of other measures of business activity, including various tools for forecasting economic developments, such as econometric models of the U.S. economy and a system of leading, coincident, and lagging economic indicators. The data and analyses prepared by this activity are disseminated mainly through its monthly publications, the Survey of Current Business, including periodic supplements to the Survey, and Business Conditions Digest.

The measures and analyses produced are used in the formulation and execution of fiscal, financial, international, and other policies related to he major economic goals of the Nation. Business plans its production, price, and investment programs with the aid of the information provided. This information is essential also for economic decisionmaking by State and local governments, labor, other economic groups, and by the growing number of individuals who feel a need for a better orientation in an economic world that is becoming increasingly complex. Universities and research organizations rely in their teaching and research programs on the information provided.

POLICY SUPPORT

The goal of this activity is to advise the Secretary, Under Secretary, and other Government officials in interpreting the state of the economy, and on matters relating to economic policy. This activity's responsibilities include: (1) providing direct support for the Secretary's participation in the Economic and Domestic Policy Councils, and in similar Administration economic policy forums; (2) preparing speeches, reports, and articles on a wide range of economic matters; (3) advising the Under Secretary on the ecunomic impact of proposed legislation and proposed Departmental and other Federal regulations; and (4) analyzing the cross-industry effects of macroeconomic developments and providing analyses of basic microeconomic problems relevant to current policy issues.

Highlights

Program Changes

The FY 1991 budget proposes four program increases in the Economic Analysis activity. Increases are requested to stop the deterioration in the quality of the U.S. national economic accounts, to modernize and extend the U.S. national economic accounts, to improve the quality of the balance of payments estimates and related analyses, and to improve the quality of the international investment data.

The FY 1990 budget provided for A-76 reviews which will result in a savings of $10,000 in FY 1991.

COST CHANGES:

Adjustment for FY 1991 pay increases and related costs

	Personnel	Amount
Pos.	0	494
FTE	0	

The President's Budget includes an estimated general pay raise of 3.5 percent effective January 1, 1991. One-half of that increase will be absorbed. The estimate also includes an average SES increase of 22 percent, with 50 percent of the cost absorbed.

Total cost in FY 1991 of general pay increase	$622	
Less amount absorbed	($311)	
Subtotal, adjustment for FY 1991 general pay increase	$311	$311
Total cost in FY 1991 of SES pay increase	$366	
Less amount absorbed	($183)	
Subtotal, adjustment for FY 1991 SES pay increase	$183	$183
Total adjustment for FY 1991 pay increase		$494

Salary rate increase for accountant/auditor employees

	Personnel	Amount
Pos.	0	28
FTE	0	

Effective November 7, 1988, salaries for GS-5, GS-7, and GS-9 accountants and auditors in the Washington, D.C. metropolitan area were increased. ESA's full-year cost for salaries and personnel benefits in FY 1990 for this increase will be $28,000 covering 10 positions in the international investment program.

Total salaries for accountant/auditor employees, old salary rate	$237	
Total salaries for accountant/auditor employees, new salary rate	$261	
Cost of salary rate increase for personnel compensation	$24	$24
Cost of salary rate increase for benefits		$4
Adjustment for cost of salary rate increase		$28

		Personnel	Amount
One more compensable day	Pos.	0	84
	FTE	0	

The cost of one more compensable day in FY 1991 compared to FY 1990 was calculated by dividing the FY 1990 estimate for personnel compensation by 260 compensable days.

Personnel compensation for FY 1990	$19,534	
Compensable day in FY 1990	260	
Increase for one more compensable day for personnel compensation		$75
Personnel benefits for FY 1990	$2,276	
Compensable day in FY 1990	260	
Increase for one more compensable day for benefit costs		$9
Total increase for one more compensable day		$84

		Personnel	Amount
Civil Service Retirement System	Pos.	0	(62)
	FTE	0	

The number of employees covered by the Civil Service Retirement System (CSRS) will continue to drop as positions become vacant and are filled by employees who are covered by the Federal Employees' Retirement System. We estimate the percentage of payroll of employees who are covered by CSRS will drop from 75.5 percent in FY 1990 to 70.8 percent in FY 1991. This will result in a decrease of $62,000 in the cost of CSRS contributions.

Total salaries subject to retirement for FY 1990	$18,941	
CSRS cost in FY 1990 ($18,941,000 x .755 x .07)		$1,001
CSRS cost in FY 1991 ($18,941,000 x .708 x .07)		$939
Decrease in CSRS contributions		($62)

	Personnel	Amount

Federal Employees' Retirement System

Federal Employees' Basic Benefits

	Personnel	Amount
Pos.	0	117
FTE	0	

The number of employees covered by the Federal Employees' Retirement System (FERS) will continue to rise as employees covered by the Civil Service Retirement System (CSRS) leave and are replaced by employees covered by FERS. We estimate that the percentage of payroll of eligible employees covered by FERS will rise from 24.5 percent in FY 1990 to 29.2 percent in FY 1991. In addition, the agency's contribution for basic benefits will rise from 12.9 percent in FY 1990 to 13 percent in FY 1991. The calculation for increased costs for basic benefits is:

Total salaries subject to retirement for FY 1990	$18,941	
Basic benefit cost in FY 1990 ($18,941,000 x .245 x .1297)		$602
Basic benefit cost in FY 1991 ($18,941,000 x .292 x .1300)		$719

Increase in basic benefit contributions		$117

Thrift Savings Plan

	Personnel	Amount
Pos.	0	18
FTE	0	

The cost of agency contributions to the Thrift Savings Plan will rise as FERS participation increases. This adjustment reflects the difference between the FY 1990 and FY 1991 costs associated with the employer contribution to the Thrift Savings Plan for FERS employees. The increased costs for contributions to the Thrift Savings Plan are:

Thrift Savings Plan cost in FY 1990 ($18,941,000 x .245 x .02)	$93
Thrift Savings Plan cost in FY 1991 ($18,941,000 x .292 x .02)	$111

Increase in Thrift Savings Plan	$18

Federal Insurance Contribution Act (OASDI)

	Personnel	Amount
Pos.	0	58
FTE	0	

Employees covered by CSRS are not covered by Old Age, Survivors, and Disability Insurance (OASDI) but are covered by Hospital Insurance (Medicare). All other employees are covered by both OASDI and Medicare. As the percentage of payroll covered by FERS rises, the cost of OASDI contributions will increase. In addition, the maximum salary subject to FICA tax will rise from $50,025 in FY 1990 to $52,725 in FY 1991, and the OASDI tax rate will increase from 6.17 percent in FY 1990 to 6.20 percent in FY 1991. This will result in an increase of $58,000.

FERS payroll subject to FICA tax in FY 1990 (18,961,000 x .245 x .89)	$4,130		
FERS OASDI Tax in FY 1990 (4,130,085 x .0617)		$255	
FERS payroll subject to FICA tax in FY 1991 (18,961,000 x .292 x .91)	$5,033		
FERS OASDI Tax in FY 1991 (5,033,002 x .0620)		$312	

Increase in OASDI for full-time permanent		$57	$57
OTP payroll subject to FICA Tax in FY 1990 (593,000 x .89)	$528		
OASDI Tax in FY 1990 (527,770 x .0617)		$33	
OTP payroll subject to FICA Tax in FY 1991 (593,000 x .91)	$540		
OASDI Tax in FY 1991 (539,630 x .0620)		$34	

Increase in OASDI for other than permanent		$1	$1

Total OASDI increase			$58

Medicare

	Personnel	Amount
Pos.	0	6
FTE	0	

All employees are subject to medicare contributions. The rate will remain at 1.45 percent, but the percentage of total payroll subject to FICA will increase from 89 percent for FTP in FY 1990 to 91 percent for FTP in FY 1991, an amount of $6,000.

Total payroll subject to FICA in FY 1990 (19,534,000 x .89)	$17,385	
Total payroll subject to FICA in FY 1991 (19,534,000 x .91)	$17,776	

Increase in payroll subject to FICA	$391	
Increase in Medicare tax (390,700 x.0145)		$6

		Personnel	Amount
Health Insurance premium	Pos.	0	123
	FTE	0	

The cost of the Government's contribution to Federal employee's health insurance premiums increased by 28 percent effective January 1989. This increase requires an additional $123,000 calculated on the estimate presented in the FY 1990 Budget of $439,000.

		Personnel	Amount
Employee's Compensation Fund	Pos.	0	(7)
	FTE	0	

This $7,000 decrease for Employee's Compensation Fund reflects a cost reduction in compensation payments from FY 1988 to FY 1989.

		Personnel	Amount
Rental payments to GSA	Pos.	0	123
	FTE	0	

The GSA rate is expected to increase the cost of currently occupied space in FY 1991 by 4.4 percent nationwide. This increase was applied to the FY 1990 rental estimate, requiring an additional $123,000.

Communications, utilities, and miscellaneous charges

		Personnel	Amount
Federal Telecommunications System	Pos.	0	(45)
	FTE	0	

Following the implementation of the FTS-2000 system, GSA anticipates lower rate charges for telephone service.

		Personnel	Amount
Printing and reproduction	Pos.	0	44
	FTE	0	

The cost of printing, both paper and labor, continues to increase. For FY 1991, the United States Government Printing Office projected a 7 percent increase over FY 1990, an increase of $44,000.

Other services

Working Capital Fund

	Personnel	Amount
Pos.	0	314

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Direct Obligations in thousands)

Activity: Economic Analysis
Subactivity: National economic accounts

Goals and Objectives

Goals: To provide a clear picture of the U.S. economy through the preparation, development, and analysis of the economic accounts of the United States.

Objectives: To maintain and improve the system of national economic accounts. The national economic accounts consist of the national income and product and wealth accounts, which provide an overall view of the economic process; the interindustry accounts, which show how the various industries of the Nation interact to produce the gross national product (GNP); and the government accounts, which provide a detailed view of Federal and of State and local governments in the GNP framework.

Base Program

National economic accounts - This work consists of the preparation, development, and analysis of the national income and product accounts, wealth accounts, measures relating to environmental change, the underlying interindustry (input-output) accounts, and the associated government accounts. The national income and product accounts, summarized by the GNP, provide an up-to-date, overall view of national production, its distribution, and its use as shown by the interrelated receipts and expenditures of producers, consumers, investors, government, and the foreign customers of the United States. The wealth accounts show the business and other components of tangible national wealth. Measures relating to environmental change include estimates of the expenditures for pollution abatement and control prepared within the framework of the national economic accounts. More specifically, the output consists of the following:

1. Monthly personal income and outlays - These estimates show personal income by type, personal taxes, total and per capita disposable personal income in current and constant dollars, personal consumption expenditures in current and constant dollars, and personal saving. Estimates of personal income and outlays are released to the public about 4 weeks after the close of the reference month and are published monthly in the Survey of Current Business (Survey).

2. GNP estimates - These estimates show GNP by type of expenditure, type of product, sector, and industry, in current and constant dollars; gross domestic product, net national product, and national income, by sector and industry, in current and constant dollars; command GNP and command national income in constant dollars; gross domestic product of corporate business in current and constant dollars; motor vehicle output, farm output, and housing output, in current and constant dollars; personal income and its disposition; personal consumption expenditures by major type of product, in current and constant dollars; national income by type of income and industry; government receipts and expenditures, by type; government purchases of goods and services, by type, in current and constant dollars; government expenditures by type and function; foreign transactions; saving and investment; private purchases of producers' durable equipment and structures, by type, in current and constant dollars; inventories and final sales of business, in current and constant dollars; number of employees, persons engaged in production, hours worked by employees, corporate profits, corporate income taxes, dividends, and undistributed profits, by industry; and price measures for GNP and its components.

Advance estimates in considerable detail are released to the public about 4 weeks after the end of the quarter, and are published in the Survey in the first month after the end of the quarter. The first full set of quarterly estimates is released to the public about 8 weeks after the end of the quarter and is published in the Survey in the second month after the end of the quarter. A revised full set of quarterly estimates is released to the public 11 weeks after the end of the quarter and is published in the Survey in the third month after the end of the quarter.

Advance annual estimates for the preceding year are published in the January Survey. Estimates for the 3 most recent years are revised on the basis of more comprehensive information and, except in benchmark years, are published in the July Survey. The greater wealth of underlying data permits the publication of considerably more detail than is possible for the quarterly figures. One hundred thirty-two tables are shown in the July Survey; quarterly estimates from 54 of these tables are published in the Survey in other months.

Comprehensive GNP benchmark estimates are prepared based largely on the results of the quinquennial economic censuses and the benchmark input-output tables. The results of the most recent benchmark revision, which incorporated the 1977 input-output tables and preliminary results of the 1982 economic censuses, were published in the December 1985, February 1986, and March 1986 Surveys. An historical supplement was published in the Fall of 1986.

3. GNP by industry - Preliminary annual estimates of GNP by industry, in current and constant dollars, are published in the April Survey. The estimates are revised on the basis of more comprehensive information and, except in benchmark years, are published in greater industrial detail in the July Survey. (In 1989, publication of the preliminary and revised estimates was delayed in order to revise the estimates beginning in 1977 to incorporate improvements.)

4. Fixed capital - Estimates of the nonresidential fixed business capital of the United States are made annually by detailed industry. These cover gross and net capital stocks, depreciation, discards, and average ages of net and gross capital stocks. The estimates are provided by legal form of organization in historical-cost, constant-cost, and current-cost valuations, and by type of structure and equipment. Summary estimates are published in the August Survey. Detailed estimates and a description of the methodology were published in August 1987 in a special supplement.

   Estimates of the value of the Nation's stock of housing are made annually. These estimates show gross and net stocks, in historical-cost, constant-cost, and current-cost valuations, of the value of the farm and nonfarm housing stock, by type of structure -- one-to-four dwelling unit structures, structures containing five or more dwelling units, mobile homes, and owner- and tenant-occupied dwelling units. Summary estimates are published in the August Survey. Detailed estimates and a description of the methodology were published in August 1987 in a special supplement.

   Estimates of the value of the stock of consumer durables are made annually. These estimates show gross and net stocks of durable goods owned by consumers in constant-cost and current-cost valuations. Summary estimates are published in the August Survey. Detailed estimates and a description of the methodology were published in August 1987 in a special supplement.

   Estimates of the value of the stock of fixed capital owned by the Federal Government and by State and local governments are made annually. These estimates show gross and net stocks, in constant-cost and current-cost valuations, for all government, the Federal Government, and State and local governments separately for equipment and structures. Summary estimates are published in the August Survey. Detailed estimates and a description of the methodology were published in August 1987 in a special supplement.

5. Inventories and business sales - Estimates of inventories and final sales of business, in current and constant dollars, and inventory-sales ratios are published quarterly in the Survey, as are separate estimates of manufacturing and trade. Estimates of manufacturing inventories by stage of fabrication also are published quarterly.

6. Environmental statistics - Annual estimates of capital expenditures and operating costs for pollution abatement and control, prepared within the framework of the national economic accounts, are published in the Survey. These estimates are prepared in current and constant dollars and are classified by sector of the economy (consumers, business, and government) and by the element of the environment affected (air, land, and water). Industry detail for annual estimates of nonfarm business capital expenditures for pollution abatement and selected industry detail for gross and net stocks for pollution abatement are prepared and published in the Survey.

7. Special compilations for international organizations - Official translations of the U.S. national income and product accounts into the forms prescribed by the United Nations and the Organization for Economic Cooperation and Development (OECD) are prepared for these organizations.

8. Input-output tables - Input-output tables show, for each industry, the amount of its output that is used by every other industry as raw materials or semi-finished products, as well as the sales to the final markets -- consumers, business investors, government, and foreigners. They also show, for each industry, its consumption of the output of every industry and its value added (total industry output less the value of materials consumed and services purchased).

   Comprehensive benchmark input-output tables are prepared every 5 years. The most recent benchmark input-output tables at the 537 industry level are for 1977 and were published in the May and October 1984 Surveys and supplements. Annual input-output tables, prepared in less industrial detail, update the benchmark tables. Annual tables have been prepared starting with 1966; the most recent tables for 1984 were published in the November 1989 Survey. Articles that explain and use the input-output tables as tools of economic analysis also are published in the Survey. Special analyses are prepared of the impact on the various industries of changes in specified final demands, output of other industries, and prices.

9. Capital goods flow tables - Tables showing capital goods flows from producing to using industries are prepared for the same years as the benchmark input-output tables. The most recent capital goods flow tables are for 1977 and were published in the November 1985 Survey.

10. Employment and employee compensation tables - Tables showing the number of employees, compensation, wages and salaries, and supplements for each industry are prepared for the same years as the benchmark input-output tables. The most recent employment and employee compensation tables are for 1977 and were published in the November 1985 Survey.

11. Government budgets in the GNP framework - The Federal and State and local budgets prepared within the GNP framework provide a means of gauging the effect of government fiscal policies on the economy. Detailed reconciliations between this concept of the Federal budget and the President's budget are made on a quarterly basis and published in the July Survey. Estimates reflecting the policies underlying the Federal budget for the upcoming fiscal year are published in the February Survey.

12. Quarterly estimates of cyclically-adjusted budgets are prepared. These estimates show the Federal receipts, expenditures, surplus or deficit, and Federal debt that would be generated if the economy were growing without cyclical fluctuation. Estimates reflecting the current year's fiscal policies are published quarterly. Separate estimates of receipts, expenditures, and their functional distributions for State and local governments, are prepared annually and published in the Survey. An alternative measure of State and local government fiscal condition that is more useful for some types of analysis is prepared annually and published in the Survey.

13. Quarterly estimates of national defense purchases of goods and services are prepared in current and constant dollars. Measures of price change are calculated for approximately 130 detailed categories of purchases. Summary estimates are published monthly in the Survey as part of the GNP.

	FTE/Obl.	140		181		+41	

Increased financing to stop the deterioration in the quality of the U.S. national economic accounts (+22 positions, +$1,927,000) - This request would provide funds to stop the deterioration in the quality of the GNP and other estimates in the U.S. national economic accounts. BEA's resources have been stretched too thin to maintain the quality of the estimates in the face of significant changes in the domestic and international economies and reductions in the quality and quantity of data sources. Deteriorating quality is a growing concern to users. The improvements that would be funded by the request are directly responsive to the President's endorsement of recommendations made to him by the Economic Policy Council's Report on Improving U.S. Economic Statistics.

This request is for funds to maintain and to strengthen the estimates in the existing U.S. national economic accounts in the areas where recent changes in the economy have been most significant and the source data the most inadequate. These improvements to the existing accounts also will be incorporated into the modernized and extended set of national economic accounts described in the accompanying request.

Part of this request will be used in BEA to develop improved methodologies and part will be used to reimburse the Census Bureau for the development and for the maintenance of source data.

In BEA, the request would provide funds to:

1. Develop improved measures of consumer expenditures on services and of output of service industries. Currently, estimates of several types of services are obtained by extrapolating the base year value with a measure of labor input that is not adjusted for changes in productivity -- a procedure that does not permit the result of increased productivity to be counted as output and thereby to be reflected in measured productivity. Such procedures would be either replaced with direct estimates of output or modified to incorporate allowances for productivity change developed from indirect evidence.

2. Develop measures of prices of "high tech" goods for use in deflating estimates of business fixed investment and estimates of imports and exports. The introduction of a price index for computers in 1985 was a substantial step forward in taking account of rapid technological change. However, there are other goods--such as semiconductors, communications equipment, and medical equipment that are affected by the same type of technical developments. These goods are not now adequately priced, and as a consequence the measured increases in output and productivity are understated.

3. Develop measures of the detailed types of goods and services purchased by State and local governments. This information is needed in order to have a sound basis for deflating State and local government purchases. It also will provide the basis for separating current and capital expenditures of State and local governments in the full set of government accounts in the modernized and extended set of accounts.

4. Develop measures of the activities of the nonprofit sector. Currently the national economic accounts do not show information on the nonprofit sector. Nonprofit institutions are included in the personal sector; their expenditures are commingled with consumer expenditures and their income and its sources are not identifiable. Measures of the activities of the nonprofit sector will shed light on their income, including unrelated business income, and will improve the measure of consumer expenditures.

These funds would also provide for speeding up the compilation of the annual input-out (I-O) tables. Currently, the annual tables are being computed with lags of 4 to 6 years. The lags can be cut to 2 to 3 years, permitting I-O information to be incorporated each year in the revisions of annual estimates of personal consumption expenditures and business fixed investment in the GNP as well as in the measures of GNP by industry. Incorporating this information in the annual revisions will significantly improve the accuracy and reduce the large revisions that now come about every 5 years in the comprehensive revision of GNP. These improvements in output measures will in turn provide improved measures of total and industry productivity.

The Bureau of Economic Analysis will reimburse the Census Bureau for:

1. Research designed to develop a way to measure nonresidential construction prices directly by means of a statistical survey. Research is necessary to establish the most feasible method to obtain data on construction prices and to prepare a price index suitable for the deflation of current-dollar construction expenditures in GNP. Currently, privately prepared cost indexes are used to prepare a deflator. The low rate of measured productivity advance for the construction industry suggests that these private indexes are very inadequate, and are not expected to improve. To improve the measurement of construction, it is necessary first to carry out research to establish a feasible approach and then to collect the necessary information by means of statistical survey. This request is for the research.

2. Continuation of Current Industrial Reports used in the estimation of GNP, particularly for business fixed investment, and of GNP by industry. The Census Bureau proposes to eliminate these reports in FY 1991; their absence will reduce substantially the accuracy of the GNP estimates.

Increased financing to modernize and extend the U.S. national economic accounts (+28 positions, +$1,625,000) - This request would provide funds to bring the U.S. national economic accounts into line with international guidelines. Unless the accounts are modernized and extended, they will become increasingly inadequate as a basis for analysis and policy formulation dealing with, for example, investment to increase productivity and competitiveness, allocation of resources, and structural changes. Further, because policy is increasingly formulated in an international setting, it has become more important for the national economic accounts--which provide measures of economic growth, inflation, and other key policy variables--to be comparable across countries.

The United Nations System of National Accounts (SNA) is the major set of international guidelines in national economic accounting. Other major Western nations--including Great Britain and Canada, which had cooperated with the United States in developing economic accounts during World War II--already follow the UN system. In the early 1990's, a revision of the UN system, the major outlines of which are already clear, will be introduced around the world. This revision is co-sponsored by the UN and four other international organizations, including the IMF and OECD. It is based on a worldwide review of progress in economic accounting over the last 20 years and of needs for domestic and cross-country analysis and policy formulation. The time is opportune for the United States to take advantage of the substantial body of expertise vested in the revised SNA.

This FY 1991 request is to provide funds for the first phase of a U.S. move to that system. Although the U.S. national income and product accounts are similar to corresponding parts of the SNA, the SNA provides a more comprehensive picture of the economy. Moving to the SNA requires both development of additional accounts and reworking of many parts of the existing accounts. Thus, the move is a major initiative. The requested increase has two parts.

The first part is to establish a special staff to plan and carry out a move to the revised SNA in the 1995 comprehensive revision of the national accounts. The staff would evaluate the specific guidelines in the revised SNA and develop general strategies to adapt the guidelines to the U.S. economy and statistical system. Then, within that structure, the staff would develop the estimating methodologies and identify the additional source data that will be required. Finally, they would introduce the concepts, accounting framework, and estimates to the government and private users of the accounts to provide an orderly transition to the SNA-based accounts.

The second part is for two specific projects to extend the existing accounts in the direction called for by the SNA. The extensions would strengthen the accounts in areas of growing policy concern and where advances in economic analysis have indicated major need.

The first project is to extend the U.S. national economic accounts to include, as the SNA does, a full set of accounts for the household, business, government, and rest-of-the-world sectors. The extension would consist of adding saving-investment accounts, capital finance accounts (sources and uses of funds), and revaluation accounts (price-change adjustments), and end-of-year balance sheets. With the extension, the U.S. accounts would provide integrated current and capital accounts, including balance sheets, for each sector and for the Nation as a whole. Analysis and policy formulation would be strengthened by a foundation built on a comprehensive, rather than partial, picture of transactions related to production, income distribution and redistribution, saving, lending, and investment and on information about the balance-sheet impact of these transactions and price-change adjustments.

The estimates of the newly integrated accounts would be built from BEA's domestic fixed capital stock estimates and international investment position estimates plus information from other agencies (mainly the Federal Reserve Board). Because the international investment data will play a key role, the separate request for increased financing to improve these data also supports this work. By the end of FY 1991, a provisional set of accounts for the rest-of-the-world sector would be completed. The provisional set would be revised in the following years as accounts for the other sectors are completed.

The second project is to extend the U.S. national economic accounts to include accounts designed to cut across the sectors and incorporate additional information to give a full picture by function or area. These extensions would provide interim improvements in areas of growing policy concern and where advances in economic analysis have indicated major need. These accounts, to be called satellite accounts in the revised SNA, provide a needed new dimension to the central framework of the national accounts. Because these accounts cut across sectors and incorporate additional information, they are vital to analysis and policy formulation faced with the need to allocate resources among competing demands. Because they are flexibly structured, they can be tailored to the individual country's setting. BEA's existing accounts for pollution abatement and control pioneered in the development of such accounts. Further development of such accounts would make a major contribution to the analysis of some of the problems that loom large in the 1990's and beyond.

The initial work would be for R&D. Outlays on R&D enhance the Nation's productive capacity. These accounts would go beyond currently available data to include constant-dollar estimates and would provide an alternative framework in which R&D outlays will be treated as capital formation (as the revised SNA will do). In this framework, the estimates could be used to obtain a better understanding of economic growth and policy needed to support it.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Direct Obligations in thousands)

Activity: Economic Analysis
Subactivity: International economic accounts

Goals and Objectives

Goals: To provide a clear picture of the U.S. economy through the preparation, development, and analysis of the economic accounts of the United States.

Objectives: To maintain and improve the system of international economic accounts. The international economic accounts consist of the balance of payments accounts, which give detail on U.S. transactions with foreign countries, and the international investment and international service estimates.

Base Program

Balance of payments accounts - This work consists of the preparation, development, and analysis of the balance of payments accounts, which provide a comprehensive and detailed view of economic transactions between the United States and foreign countries. Major types of transactions covered are merchandise trade; travel, transportation, and private services; income on international investment; U.S. Government military and other services; private remittances; foreign aid programs; private capital flows; and changes in foreign official assets in the United States and U.S. official reserve assets. More specifically, the output consists of the following:

1. Balance of payments estimates - Estimates containing all major components of the balance of payments accounts, including regional and country breakdowns, are published quarterly in the Survey. The regional and country breakdowns consist of bilateral balance of payments estimates for the European Communities; United Kingdom; total Western Europe; Eastern Europe; Canada; Latin American Republics and other Western Hemisphere countries; Japan; other countries in Asia and Africa; Australia; and international organizations.

   Balance of payments quarterly estimates are released to the public about 12 weeks after the end of the quarter and are published in the Survey in the third month after the end of the quarter. Regular quarterly articles on the balance of payments also are published in the Survey. These analyze current developments in the U.S. balance of payments, changes in the foreign exchange value of the U.S. dollar, and the economic developments here and abroad that affect them.

   Preliminary annual estimates for the preceding year are published in the March Survey. Estimates for at least the 3 most recent years are revised on the basis of more comprehensive information and are published in the June Survey.

   Annual bilateral balance of payments accounts for Mexico, Venezuela, Belgium-Luxembourg, the Netherlands, France, West Germany, Italy, and South Africa are published in the June Survey. The bilateral accounts with members of the Organization of Petroleum Exporting Countries are published annually in either the March or June Survey. The U.S. balance of payments current account with Canada is reconciled with Canadian data, and the results are published in the Survey.

Short-term projections of various balance of payments components are prepared at least four times a year for Government use, in collaboration with an interagency committee.

2. Special analyses - Special analyses of current developments related to the balance of payments are prepared. Examples are the effects of changes in exchange rates and prices on U.S. trade, the impact of petroleum transactions on the balance of payments, and appraisals of the balance of payments presentations.

3. Merchandise trade - Special estimates of foreign trade data on a balance of payments basis are maintained which show consistent time series for commodities classified by end-use categories. Estimates of merchandise trade on a balance of payments basis are released to the public about 12 weeks after the end of the quarter and are published in the *Survey* in the third month after the end of the quarter. Monthly estimates are prepared for internal use.

4. International travel, transportation, and other services - Detailed estimates of receipts and payments arising from international travel and transportation, military expenditures and sales, and of a number of other U.S. Government and private service transactions and private remittances are prepared for the balance of payments accounts. These estimates are published quarterly in the *Survey*. An article providing annual detailed information on travel by country and by type of travel usually is published in the May *Survey*.

5. Government grants and credits - Quarterly estimates are prepared, giving information by program on grants, credits, and other assistance to foreign countries by the U.S. Government. These estimates are included in the quarterly balance of payments accounts. In addition, more detailed information is published primarily for use by the Congress and other Government agencies. These data are used to compile the official record of outflows to, and receipts from, foreign countries for Government aid and credit programs.

   Special compilation of Government grants and credits are prepared for OMB for use in the annual budget message and for the Department of the Treasury for use in annual reports on the international financial transactions of the Government. In addition, a detailed report is prepared annually for the use of the Development Assistance Committee of the OECD.

6. Private capital (other than direct investment) - Tabulations of banking and securities transactions and of corporate transactions with unaffiliated foreigners are prepared, and income on these investments is calculated. These estimates are included in the quarterly balance of payments accounts.

7. International investment position of the United States - Detailed annual estimates are prepared of the international assets and liabilities of the United States, changes in its net investment position, and factors accounting for these changes. These estimates, published in the June *Survey*, can be reconciled with the capital flows shown in the balance of payments accounts.

8. Special compilations of the balance of payments accounts - Special versions of the balance of payments accounts are prepared to fulfill the Government's commitment to provide information to the International Monetary Fund, the International Bank for Reconstruction and Development, the United Nations, and the OECD. These may differ in format and content from the official U.S. presentation.

International investment and international services estimates - The international investment work consists of the preparation, development, and analysis of estimates of U.S. direct investment abroad; foreign direct investment in the United States; income flows associated with these investments; and other economic aspects of multinational enterprises, including their trade, employment, taxes, and plant and equipment expenditures. The international services work consists of the preparation, development, and analysis of U.S. services transactions with both affiliated foreign persons (parents and affiliates) and unaffiliated foreign persons. More specifically, the output consists of the following:

1. Regular sample surveys - Quarterly surveys of U.S. direct investment abroad and of foreign direct investment in the United States are taken in order to obtain data on income and capital flows for inclusion in the quarterly balance of payments accounts. A summary presentation of the direct investment position at the end of each year is published in the June Surv[illegible] A more detailed annual recapitulation of the results of these surveys is published in the August Survey. These annual reports give detailed information by country and industry on equity and intercompany account flows, income, reinvested earnings, royalties and license fees, other services transactions, and the direct investment position at the end of each year.

   Semiannual surveys are taken of current and projected plant and equipment expenditures of foreign affiliates of U.S. firms. The results are published usually in the March and September Surveys.

   Annual surveys of foreign direct investment in the United States and of U.S. direct investment abroad gather other financial and operating data, such as on employment, sales, trade, property, plant, and equipment. The results of the annual survey of foreign direct investment in the United States covering 1986 were published in the May 1988 Survey. For 1987, the annual survey was replaced by the 1987 benchmark survey of foreign direct investment in the United States. The results of the 1986 annual survey of U.S. direct investment abroad were published in the June 1988 Survey; results of the 1987 survey were published in the June 1989 Survey.

2. Benchmark surveys - These surveys cover transactions between all U.S. parent organizations and their foreign affiliates, and between foreign parent organizations and their U.S. affiliates. Other economic information collected relating to U.S. parents and U.S. and foreign affiliates include sales of goods and services, trade, employment, balance sheets, and income statements. The estimates for these multinational companies from the benchmark surveys are shown seperately by industry, and by country, or region. The results of the benchmark survey of U.S. direct investment abroad for 1982 were summarized in the December 1985 Survey and also were published in detail as a special supplement in December 1985. A survey covering 1989 has been designed and is scheduled to be mailed out in March 1990. The results of the benchmark survey of foreign direct investment in the United States for 1980 were summarized in the October 1983 Survey and were published in detail as a special supplement in October 1983. Processing of the benchmark survey of foreign direct investment in the United States covering 1987 has been completed. A news release containing highlights of the survey was issued in June 1989. It was followed by an article in the July 1989 Survey and a detailed data publication in August 1989.

3. Services surveys - A benchmark survey of selected services transactions with unaffiliated foreign persons is conducted to obtain data, by country, on the following types of services: advertising; computer and data processing; data base and other information services; telecommunications; agricultural services; research and development, and commercial testing, laboratory services; management consulting and public relations; accounting, auditing, and bookkeeping; legal services; education and training services; mailing, reproduction, and commercial art; employment agencies; industrial engineering; industrial-type maintenance and repair, installation, and training; performing arts; direct insurance; and construction, engineering, architectural, and mining services. Selected data from the benchmark survey are updated in nonbenchmark years by means of an annual follow-on survey. Three other annual surveys of services transactions--the BE-47 (on construction, engineering, architectural, and mining services), the BE-48 (on insurance), and the BE-93 (on royalties and license fees)--are also conducted.

4. Multinational company activities - An information system is maintained which integrates the international and domestic data for multinational companies collected by BEA. This system provides for the production of organized and consistently defined information on U.S. companies and their foreign affiliates, and on foreign companies and their U.S. affiliates, at the needed level of detail, including data on type of ownership, industry, and country classification. Data are stored in accessible form and are organized to facilitate the matching of benchmark surveys against sample surveys, permitting efficient blowups of sample surveys to universe estimates. Analyses utilizing the data are published in the Survey covering such topics as the role of multinational companies and their foreign affiliates in U.S. international trade, the employment and payroll costs of multinational companies, and estimates of gross product (value added) of foreign affiliates of U.S. companies and of U.S. affiliates of foreign companies.

INCREASE FOR 1991
(Direct Obligations in thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Balance of payments..	Pos./BA	66	$4,044	82	$5,134	+16	$1,090
	FTE/Obl.	59		72		+13	

Increased financing to improve the quality of the balance of payments estimates and related analyses (+16 positions, +$1,090,000) - This request would provide funds to improve the quality of the balance of payments estimates and analyses. BEA's resources have been stretched too thin to maintain the quality of the estimates in the face of significant changes in the economy and in the quality and quantity of data sources. The improvements that would be funded are directly responsive to the President's endorsement of recommendations made to him by the Economic Policy Council's Report on Improving U.S. Economic Statistics.

This request is for funds to maintain and to strengthen the balance of payments and related estimates in areas where changes in international trade and investment have been very significant and the source data inadequate. The funds would be used to:

1. Measure the net international investment position of the United States at current values. In the present estimates, some types of investment are estimated using current values, while other types--particularly direct investment--are estimated using book values. Use of book values rather than current values seriously distorts estimates of the net international investment position.

2. Develop measures of two types of international services that are not yet adequately covered in the balance of payments. One type is international services provided by U.S. banks and other financial institutions for which fees are received. The work on fee (often called "noninterest") income would carry forward initial exploration done by an interagency work group. The other type is truck transportation to and from Canada and to and from Mexico. Because of deregulation of the trucking industry and the recent U.S.-Canadian free trade agreement, the volume of such service transactions is increasing. However, no estimates of these service transactions with Mexico are included in the balance of payments and those with Canada are based on an inadequate methodology.

3. Improve the methods for preparing short-term projections of the balance of payments accounts. Projections of services transactions and capital flows are most in need of work. These projections are used by the Interagency Balance of Payments Information Committee to brief policymakers on the prospects for the U.S. balance of payments.

INCREASE FOR 1991
(Direct Obligations in thousands)

		1991 Base		1991 Estimate		Increase/ (Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
International investment and international services estimates............	Pos./BA	73	$3,629	103	$5,982	+30	+$2,353
	FTE/Obl.	63		88		+25	

Increased financing to improve the quality of the international investment data (+30 positions, +$2,353,000) - This request would provide funds to improve the data for foreign direct investment in the United States and U.S. direct investment abroad. BEA's current resources are insufficient to make the improvements required to keep pace with the rapid growth in direct investment and the increasing public interest in information to monitor such investment.

This request would fund improvements in the quality of the data, its analysis, and the speed with which it is made available. Projects would:

1. Match BEA's data for foreign-owned U.S. business enterprises (i.e., companies) with the Census Bureau's data for the individual establishments (i.e., plants) of those enterprises. The computer-based matching would provide much more State and industry detail for foreign-owned enterprises than is currently available. These data are needed for examining the impact of foreign direct investment on the economies of individual States and on specific industries.

2. Improve compliance with the reporting requirements of BEA direct investment surveys (a) by increasing follow-up of companies that do not report or that report incomplete or inaccurate data, (b) by improving mailing lists, and (c) by publicizing the reporting requirements more fully. Obtaining compliance has become an increasingly serious problem at a time when accuracy and reliability of the data have become ever more important.

3. Strengthen BEA's ability to analyze the data collected. This is supported in part by reimbursements from special requests for information on direct investment but the reimbursements do not provide for the comprehensive analyses sought by Congress, other policymakers, and the general public. Outsiders cannot undertake analyses of the company-level data because of BEA's legal confidentiality requirements.

4. Publish data on U.S. businesses newly acquired or established by foreign direct investors on a more current basis--every 6 months, instead of once a year as at present. The more frequent publication is called for by the stepped up pace of foreign direct investment in the United States.

5. Complete the development of, and implement, an innovative interactive computerized edit system. The system would make it possible for BEA to process the direct investment survey data more quickly and efficiently.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Direct Obligations in thousands)

Activity: Economic Analysis
Subactivity: Regional economic accounts

Goals and Objectives

Goals: To provide a clear picture of the U.S. economy through the preparation, development, and analysis of the economic accounts of the United States.

Objectives: To maintain and improve the system of regional economic measurement and analyses.

Base Program

Regional economic measurement - This work consists of the preparation, development, and analysis of economic accounts that show detail on economic activity by region, State, metropolitan area, and county. More specifically, the output consists of the following:

1. Personal income, by State - Annual estimates of personal income and disposable personal income by State and for the District of Columbia are prepared twice each year and published in the *Survey*, first in April on the basis of preliminary and incomplete data, and next in August when more reliable and detailed estimates can be made. The April issue contains preliminary estimates of total and per capita personal income, including percent changes in selected sources of personal income. Articles analyzing the changes in the geographic distribution of personal income are published periodically in the *Survey*. The August issue presents revised estimates of personal income subdivided by type of income and by major industry of origin.

   Quarterly estimates of total personal income by State are published in the *Survey* in the fourth month after the end of the quarter. Estimates of the 3 most recent years are revised on the basis of more comprehensive information and are published in the October *Survey*.

2. Personal income, by county - Annual estimates of total and per capita personal income are published in the April *Survey* for each of the more than 3,100 counties and county equivalents in the United States. A detailed breakdown of county personal income subdivided by type of income and by major industry of origin is published each summer in special supplements. These estimates constitute the only comprehensive and detailed economic series available annually on a local area basis.

3. Personal income, by metropolitan area - Annual estimates of total and per capita personal income are published in the April *Survey* for each of the designated metropolitan areas. Detailed estimates of personal income, subdivided by type of income and by major industry of origin for each metropolitan area, are published each summer in special supplements.

Regional economic analysis - This work consists of the preparation of analyses and projections of States and local areas. More specifically, the output consists of the following:

1. Regional, State, and local area economic analyses - Analyses are carried out to identify and measure the factors that determine area differences in levels and growth rates of total and per capita personal income and of industrially-detailed earnings, employment, and output. These analyses are needed to improve the techniques for preparing the State and local area economic projections, and to assess, in advance, the area effects of alternative development programs. Analyses are published in the Survey and in special supplements.

2. Regional, State, and local area economic projections - Projections of personal income, employment, gross product, earnings (of persons) by industrial source, and population are prepared every 5 years for each State and the District of Columbia and for all metropolitan areas. During the interim period, economic projections are made for selected State and local areas. Economic projections are published in the Survey and in special supplements.

JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Direct Obligations in thousands)

Activity: Economic Analysis
Subactivity: Analysis of economic trends

Goals and Objectives

Goals: To provide a clear picture of the U.S. economy through the preparation, development, and analysis of the economic accounts of the United States.

Objectives: To maintain and improve the measures and analyses that extend the usefulness of the economic accounts. These include econometric models of the U.S. economy, a system of business cycle indicators, and analyses of the economic situation.

Base Program

Economic outlook - This work consists of the preparation, development, and analysis of econometric model forecasts and simulations and a system of leading, coincident, and lagging business cycle indicators and of related data that help to depict current and future economic activity. More specifically, the output consists of the following:

1. Econometric model - Short-term forecasts of economic activity are made four times a year using a quarterly econometric model of the U.S. economy consisting of about 250 behavioral equations and 900 variables. Forecasts are distributed to policy makers within the Department and to more than two dozen other Federal agencies. In addition, econometric studies for special policy-oriented analyses are made on request and updated forecasts are provided to key policy-oriented agencies each month.

2. Business cycle indicators - Business Conditions Digest (BCD), a monthly compendium of economic indicators, presents approximately 300 monthly and quarterly seasonally adjusted economic time series, about 120 of which have been classified as cyclical indicators (i.e., series that conform well to broad fluctuations in aggregate economic activity). The cyclical indicators (classified as leading, roughly coincident, or lagging), the composite indexes derived from them, and related diffusion indexes have been recognized as useful tools for economic forecasting. The remaining series are useful in the interpretation of the economic situation and outlook but they do not qualify as cyclical indicators. Various analytical measures and summary characteristics of individual series also are shown. The series are shown in graphic and tabular form. In addition, the Handbook of Cyclical Indicators, published intermittently as a supplement to BCD, contains the composite index methodology, descriptions and historical data for BCD data series, and analytical measures for cyclical indicators. The latest edition was issued in 1984.

Current business analysis - This work consists of the preparation of analyses of the economic situation and outlook, the Survey, and the provision of information services. More specifically, the output consists of the following:

1. Analysis of the economic situation - analyses of current economic conditions and the near-term outlook are published in "The Business Situation" section of the Survey. These analyses are prepared within the framework of the economic accounts. A review and interpretation of the advance GNP estimates are published quarterly. In addition, analyses of specific aspects of the economic situation are published. Examples are: residential construction; the labor market; price changes; financial developments; and developments in particular industries, such as steel and autos, that have an important influence on short-term business activity

2. Statistics and explanatory notes are published monthly in the "S-pages" of the Survey. These carry approximately 1,950 separate series. Used in conjunction with the biennial Business Statistics supplements to the Survey, they provide continuous and consistent series running back many years and cover all major aspects of the economy. Most of the series are obtained from other Government agencies and from private organizations.

3. The biennial Business Statistics supplements provide back data for series published in the monthly issues of the Survey, most of them in the "S-pages." Explanatory notes define terms, give sources of data, and describe methods of compilation.

4. Preparation of the Survey - This includes the review and coordination of the layout, chartwork, and mechanics of preparing the copy of the Survey for the printer. Similar support is provided for other BEA publications.

5. Editorial and publications services - This includes the substantive and editorial review of all BEA monographs and press releases and the provision of publications production services.

Salaries and Expenses
JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Direct Obligations in thousands)

Activity: Policy Support
Subactivity: Policy support

Goals and Objectives

Goals: To support the Secretary, Under Secretary, and other Government officials in interpreting the state of the economy, and on matters relating to economic policy.

Objective: To advise the Secretary, Under Secretary, and other Government officials on matters related to economic developments and forecasts, and the development of options and positions relating to both macroeconomic and microeconomic policy; and to support the Secretary's and the Under Secretary's participation in the Economic and Domestic Policy Councils, and in similar Administration economic policy forums.

Base Program

Economic policy support - The output consists of the following:

1. Reports, articles, and speeches on the economic situation are prepared, and regular and special studies on economic conditions and developments are conducted. Analyses include forecasts of aggregate economic activity, as well as reviews of current economic conditions in key sectors. Reports and analyses on policy issues of concern to the Secretary and the Under Secretary are prepared. Such issues include overall fiscal and monetary policy, tax policy, the sectoral implications of macro-level policies, micro-level impacts of legislation and regulation, and the impact of international policy trends on the domestic economy.

2. Information, analysis, and guidance on pending economic policy decisions are provided for the Secretary's and the Under Secretary's participation in the Economic and Domestic Policy Councils, in their working groups, and in similar Administration policy forums. In addition, policy proposals and staff papers are prepared for presentation by the Secretary and Under Secretary to these Councils and forums.

3. Detailed economic forecasts are provided for the Secretary's and Under Secretary's participation in interagency groups. These forecasts are prepared using independent estimating techniques, and they incorporate financial sector data and supply variables.

4. Material prepared by other Department of Commerce elements concerning the domestic economic situation is reviewed to ensure that it reflects the most accurate and timely information.

5. Assistance is provided to the Office of Public Affairs and other Commerce elements in responding to news media requests for economic information and interpretation of economic data.

6. Congressional testimony is prepared for the Under Secretary.

7. Participation in policy deliberations of the Organization for Economic Cooperation and Development (OECD) and the International Labor Organization (ILO) is provided.

Business analysis -The output consists of the following:

1. Analyses of the cross-industry effects of microeconomic developments, trends, proposed and current policies, and unique events, e.g., supply interruptions, strikes, natural disasters, emergency mobilization and industrial preparedness conditions, etc., are conducted.

2. Assessment of the impact of selected regulations and legislation on the business community are prepared.

3. Microeconomic research of contemporary industrial trends is conducted and supporting statistical data bases are developed.

4. Operates a computerized economic bulletin board and a data base system that provide the Government and the private sector with a single source of current economic statistics, such as the gross national product (GNP), the employment situation, personal income, the consumer price index, the Federal Reserve Board's monetary and financial data, and other economic information.

5. Operates the National Trade Data Bank, as required by the Omnibus Trade and Competitiveness Act of 1988, which collects data in electronic form from many Government agencies including Census, BEA, BLS, Agriculture, the Federal Reserve Board, and international agencies, and disseminates these data through a computerized distribution system.

6. Provides information to the public on the use of the Economic Bulletin Board and the National Trade Data Bank and refers users to the source agencies for information on the use of the data in these systems.

Department of Commerce
Economic and Statistical Analysis
JUSTIFICATION OF PROGRAM AND PERFORMANCE
(Dollar amounts in thousands)

Activity: Reimbursable Program
Subactivity: Reimbursable program

Goals and Objectives

Goals: To provide economic and statistical data and analyses to other Federal agencies and to individuals and firms requesting such data.

Objectives: To provide, at cost, economic and statistical data and analyses to Federal agencies, which rely on the information to achieve their program objectives, and to any person, firm, or organization, public or private upon request.

Base Program

ESA upon request provides economic and statistical data and analyses on a reimbursable or advance payment basis to other Federal agencies, State and local government agencies, and the private sector. Fees are charged, and reimbursable agreements are established, when a special benefit is provided, i.e., a benefit to an identifiable recipient beyond that derived by the public at large. Fees and reimbursable agreements are priced to recover the full cost of providing the benefit. ESA's authorization to perform this work is 31 U.S.C. 686 and 15 U.S.C. 1526.

ESA's reimbursable activities consist of providing:

1. Development and operation of the National Trade Data Bank.
2. Support for activities related to oversight, congressional, and public affairs of the Census Bureau.
3. Special data tapes, documentation, bulletins, or reports on input-output and GNP by industry data.
4. Estimates of county money income and special retrievals of personal income and employment.
5. Special regional economic projections and analyses.
6. Training of foreign nationals in national economic accounting.
7. Economic Bulletin Board subscription service.
8. Special surveys, compilations, tabulations, and calculations of multinational corporate data.
9. Other special economic and statistical data.

Objectives

Objectives: To record monies received from the sale of economic and statistical data and analyses to other Federal agencies, State and local government agencies, and the private sector.

Base Program

ESA's offsetting receipts consist of the monies received from the sale of economic and statistical data and analyses in the reimbursable account.

Mr. DWYER. Here to testify in support of this request is Michael R. Darby, Under Secretary for Economic Affairs. Since this is your first appearance before the Committee, we will insert your biographical sketch into the record at this point and your fingerprints, and then you may proceed with your statement. [Laughter.]

[The biography of Mr. Darby follows:]

BIOGRAPHY OF MICHAEL R. DARBY, UNDER SECRETARY FOR ECONOMIC AFFAIRS

Michael R. Darby was confirmed as Under Secretary of Commerce for Economic Affairs on May 17, 1989. He succeeded Robert Ortner.

The Under Secretary for Economic Affairs is in charge of the department's economic and statistical programs. The Office of Economic Affairs includes the Bureau of the Census and the Bureau of Economic Analysis.

Mr. Darby had been Assistant Secretary for Economic Policy at the Treasury Department since mid-1986. Before coming to the Treasury, he had been a professor of economics at the University of California at Los Angeles (UCLA) for eight years. He was an associate professor of economics from 1973 to 1978 at UCLA, a visiting assistant professor in 1972-73, and an assistant professor of economics at Ohio State University from 1970 to 1973.

His professional activities include serving as the editor of the *Journal of International Money and Finance* from 1981 to 1986. He has been a member of the editorial board of that Journal since 1986 and of the *American Economic Review* from 1983 to 1987. He was a research associate of the National Bureau of Economic Research from 1976 to 1986, and a vice president and director of Paragon Industries from 1964 to 1982. He has served on the Executive Committee of the Western Economic Association since 1987.

Mr. Darby has written numerous articles and books on money and banking, macroeconomics, and international finance. He is listed in *Who's Who in Economics.* He has been honored as a National Science Foundation Graduation Fellow (1967-69), Lilly Honor Fellow (1967-70) and Federal Deposit Insurance Corporation Graduate Fellow (1969-70). He recently received the Treasury Department's highest honor, the Alexander Hamilton Award, in recognition of his distinguished leadership and service.

Mr. Darby received his Ph.D. in economics from the University of Chicago in 1970 and his M.A. in 1968. He was a Senior Fellow of Dartmouth College and graduated summa cum laude with an A.B. in 1967.

He was born November 24, 1945, in Dallas, Texas. He is married to the former Joanne T. (Jaye) Smith and has two children.

Mr. DARBY. Thank you, Mr. Chairman.

This is my first opportunity to appear before the subcommittee, and I am quite pleased to be here.

I am here today to present our fiscal year 1991 budget request. While Economic Affairs is a single organization, we do have two separate budgets, Economic and Statistical Analysis and Census.

First I will comment on the request for the ESA account. Joining me are Allan Young, Director of the Bureau of Economic Analysis; and Jerome Jackson, our principal Administrative Officer.

When we finish with ESA, we will turn to the budget request for the Bureau of the Census. I will be joined by Barbara Bryant, Director of the Bureau of the Census; and Joseph Bellomo, head of the Census Budget Operation.

I would like to begin with a general point. In years past, my predecessors said that Economic Affairs' number one priority was to maintain the quality of economic and demographic statistics.

It is not clear to me that Economic Affairs was successful in doing so across the board. We gained ground in some areas but lost ground in others. On balance, I think we experienced erosion in the quality of our statistics if, for no other reason, than that they could not keep pace with an increasingly complex world.

I am not alone in this view. After a thorough review of the Federal Statistical System, the Economic Policy Council concluded that the system needed repair in some areas and strengthening in others. These conclusions echo those reached by the Office of Technology Assessment in its September 1989 background paper on *Statistical Needs For A Changing U.S. Economy.*

On January 25th, Michael Boskin, Chairman of the Council of Economic Advisers, with the President's endorsement, announced the Administration's program for improving the quality of economic statistics.

Mr. Chairman, the program increases included in our ESA budget and our Census budget can be traced directly back to the findings that gave rise to the President's program.

We believe they represent a much needed—you could even say overdue—investment in improving our understanding of how our economy and society function.

Turning now to the ESA budget, it is important to note that most of it, approximately 86 percent, is for the Bureau of Economic Analysis. A large portion of the Nation's most essential economic statistics are prepared and published by BEA. Some examples include the Gross National Product estimates, and the incoming and outgoing foreign direct investment estimates.

The 1991 ESA request represents a key component in the President's recently announced statistics initiative. The budget provides $39.9 million for the ESA salaries and expenses appropriation. Our request includes $2.0 million for adjustments to the base, $1.9 million to stop the deterioration in the quality of the U.S. national economic accounts, and $1.6 million to modernize and extend the U.S. national economic accounts.

This second effort will contribute to the most extensive changes in the accounts since World War II, and also to make them much more comparable with the national accounts of other nations.

Our request also includes $1.1 million to improve the quality of balance of payments estimates and related analyses, and $2.3 million to improve the quality of the international direct investment data. I think there is widespread agreement on the need for better information on our economic relations with the rest of the world and on direct investment. Our program proposals should give us the facts we need.

That concludes my statement, Mr. Chairman. My colleagues and I are prepared to answer your questions before moving on to the Census request.

[The prepared statement of Mr. Darby follows:]

CONSULTING AND RELATED SERVICES
(Obligations in thousands of dollars)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting services	$63	$25	$40
Management and professional services	209	195	195
Special studies and analyses	0	25	25
Management and support services for research and development	0	0	0
Total	272	245	260

Consulting services, management and professional services, and special studies and analyses are utilized to the extent that they provide a cost-effective source for special services where the cost of permanent employment or other substitutes would be higher.

Further, it is not practical for ESA to conduct its work in an insulated environment. Consulting and related services contribute to the overall stability of ESA's work by: (1) providing cross-checks to ESA's work; and (2) supplementing staff to investigate important issues or problems.

Bureau of Economic Analysis

This activity provides a clear picture of the U.S. economy through the preparation, development, and interpretation of the national income and product accounts, summarized by the gross national product (GNP); the wealth accounts, which show the business and other components of national wealth; the input-output accounts, which trace the interrelationships among industrial markets; personal income and related economic series by geographic area; the U.S. balance of payments accounts and associated foreign investment accounts; and measures relating to environmental change within the framework of the national economic accounts. The work on the national economic accounts is supplemented by the preparation and analysis of other measures of business activity, including various tools for forecasting economic developments, such as econometric models of the U.S. economy, and a system of leading, coincident, and lagging economic indicators. The data and analyses prepared by this activity are disseminated mainly through its monthly publications, the Survey of Current Business, including periodic supplements to the Survey, and Business Conditions Digest, and also through the Economic Bulletin Board.

Business Analysis

This subactivity's responsibilities include (1) analyses of the cross-industry effects of microeconomic developments, trends, proposed and current policies, and unique events, e.g., supply interruptions, strikes, and natural disasters; (2) assessments of the impact of selected regulations and legislation on the business community; (3) microeconomic research of contemporary industrial trends and supporting statistical data bases; and (4) the development and operation of the Department's Economic Bulletin Board and the National Trade Data Bank (funded reimbursably from Census).

PREPARED STATEMENT BY MICHAEL R. DARBY
UNDER SECRETARY FOR ECONOMIC AFFAIRS

BEFORE THE SUBCOMMITTEE ON
COMMERCE, JUSTICE, STATE, THE JUDICIARY AND RELATED AGENCIES
COMMITTEE ON APPROPRIATIONS
HOUSE
FEBRUARY 28, 1990

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE, THIS IS MY FIRST OPPORTUNITY TO APPEAR BEFORE THE SUBCOMMITTEE AND I AM QUITE PLEASED TO DO SO. I AM HERE TODAY TO PRESENT OUR FISCAL YEAR 1991 BUDGET REQUEST. WHILE ECONOMIC AFFAIRS IS A SINGLE ORGANIZATION, WE DO HAVE TWO SEPARATE BUDGETS: ECONOMIC AND STATISTICAL ANALYSIS, OR ESA, AND CENSUS.

FIRST, I WILL COMMENT ON THE REQUEST FOR THE ESA ACCOUNT. JOINING ME ARE ALLAN YOUNG, DIRECTOR OF THE BUREAU OF ECONOMIC ANALYSIS, AND JEROME JACKSON, OUR PRINCIPAL ADMINISTRATIVE OFFICER. WHEN WE FINISH WITH ESA, WE WILL TURN TO THE BUDGET REQUEST FOR THE BUREAU OF THE CENSUS. I WILL BE JOINED BY BARBARA BRYANT, DIRECTOR OF THE BUREAU OF THE CENSUS, AND JOSEPH BELLOMO, HEAD OF CENSUS' BUDGET OPERATIONS.

I WOULD LIKE TO BEGIN WITH A GENERAL POINT. IN YEARS PAST MY PREDECESSORS SAID THAT ECONOMIC AFFAIRS' NUMBER ONE PRIORITY WAS TO MAINTAIN THE QUALITY OF ECONOMIC AND DEMOGRAPHIC

STATISTICS. IT IS NOT CLEAR TO ME THAT ECONOMIC AFFAIRS WAS SUCCESSFUL IN DOING SO ACROSS THE BOARD. WE GAINED GROUND IN SOME AREAS BUT LOST GROUND IN OTHERS. ON BALANCE, I THINK WE EXPERIENCED EROSION IN THE QUALITY OF OUR STATISTICS, IF FOR NO OTHER REASON THAN THAT THEY COULD NOT KEEP PACE WITH AN INCREASINGLY COMPLEX WORLD.

I AM NOT ALONE IN THIS VIEW. AFTER A THOROUGH REVIEW OF THE FEDERAL STATISTICAL SYSTEM, THE ECONOMIC POLICY COUNCIL CONCLUDED THAT THE SYSTEM NEEDED REPAIR IN SOME AREAS AND STRENGTHENING IN OTHERS. THESE CONCLUSIONS ECHO THOSE REACHED BY THE OFFICE OF TECHNOLOGY ASSESSMENT IN ITS SEPTEMBER 1989 BACKGROUND PAPER ON STATISTICAL NEEDS FOR A CHANGING U.S. ECONOMY. ON JANUARY 25, MICHAEL BOSKIN, CHAIRMAN OF THE COUNCIL OF ECONOMIC ADVISERS, WITH THE PRESIDENT'S ENDORSEMENT, ANNOUNCED THE ADMINISTRATION'S PROGRAM FOR IMPROVING THE QUALITY OF ECONOMIC STATISTICS.

MR. CHAIRMAN, THE PROGRAM INCREASES INCLUDED IN OUR ESA BUDGET AND OUR CENSUS BUDGET CAN BE TRACED DIRECTLY BACK TO THE PRESIDENT'S PROGRAM AND TO THE FINDINGS THAT GAVE RISE TO THE PRESIDENT'S PROGRAM. WE BELIEVE THEY REPRESENT A MUCH NEEDED - YOU COULD EVEN SAY OVERDUE - INVESTMENT IN

IMPROVING OUR UNDERSTANDING OF HOW OUR ECONOMY AND SOCIETY FUNCTION.

TURNING NOW TO THE ESA BUDGET, IT IS IMPORTANT TO NOTE THAT MOST OF IT, APPROXIMATELY 86 PERCENT, IS FOR THE BUREAU OF ECONOMIC ANALYSIS (BEA). A LARGE PORTION OF THE NATION'S MOST ESSENTIAL ECONOMIC STATISTICS ARE PREPARED AND PUBLISHED BY BEA. SOME EXAMPLES INCLUDE THE GROSS NATIONAL PRODUCT ESTIMATES, AND THE INCOMING AND OUTGOING FOREIGN DIRECT INVESTMENT ESTIMATES.

THE 1991 ESA REQUEST REPRESENTS A KEY COMPONENT IN THE PRESIDENT'S RECENTLY ANNOUNCED STATISTICS INITIATIVE. THE BUDGET PROVIDES $39.9 MILLION FOR THE ESA SALARIES AND EXPENSES APPROPRIATION. OUR REQUEST INCLUDES $2.0 MILLION FOR ADJUSTMENTS TO THE BASE, $1.9 MILLION TO STOP THE DETERIORATION IN THE QUALITY OF THE U.S. NATIONAL ECONOMIC ACCOUNTS, AND $1.6 MILLION TO MODERNIZE AND EXTEND THE U.S. NATIONAL ECONOMIC ACCOUNTS. THIS SECOND EFFORT WILL CONTRIBUTE TO THE MOST EXTENSIVE CHANGES IN THE ACCOUNTS SINCE WORLD WAR II AND ALSO TO MAKE THEM MUCH MORE COMPARABLE WITH THE NATIONAL ACCOUNTS OF OTHER NATIONS.

OUR REQUEST ALSO INCLUDES $1.1 MILLION TO IMPROVE THE QUALITY OF BALANCE OF PAYMENTS ESTIMATES AND RELATED ANALYSES AND $2.3 MILLION TO IMPROVE THE QUALITY OF THE INTERNATIONAL DIRECT INVESTMENT DATA. I THINK THERE IS WIDESPREAD AGREEMENT ON THE NEED FOR BETTER INFORMATION ON OUR ECONOMIC RELATIONS WITH THE REST OF THE WORLD AND ON DIRECT INVESTMENT. OUR PROGRAM PROPOSALS SHOULD GIVE US THE FACTS WE NEED.

THAT CONCLUDES MY STATEMENT, MR. CHAIRMAN. MY COLLEAGUES AND I ARE PREPARED TO ANSWER YOUR QUESTIONS BEFORE MOVING ON TO THE CENSUS REQUEST.

Mr. **Dwyer**. Thank you, Mr. Darby.

Those bells were for our votes so when Mr. Smith comes back, I will be going. Don't let it confuse you.

FY 1991 REQUEST TO OMB

What was your request to OMB for your budget, what was your original request?

Mr. **Darby**. The request that went to OMB was $39 million.

Mr. **Dwyer**. So they really didn't cut you at all. You asked for $39,000,000 and they gave you $39,948,000.

Mr. **Darby**. Well, between the time the request went to OMB and the time the decision was made, I believe that the Economic Policy Council's analysis and report came through. And the importance of this initiative became clear.

QUALITY OF ECONOMIC STATISTICS

Mr. **Dwyer**. In your statement, you said that the number one priority for ESA was to maintain the quality of economic and demographic statistics. It was not clear that you were successful in doing so across the board.

Would you tell us where you gained ground and lost ground? I think you made that statement.

Mr. **Darby**. Okay. I'll do my best.

I think that we gained ground, for example, in the international investment area in the last several years. Now, we are in a process where that ground can be lost. The compliance with the survey has fallen. In fact, we have made a reprogramming request, given that we can't do it all, to shift some resources, among other places, into trying to maintain the schedule and maintain the quality in that area. But it has improved.

I think the GNP data has gradually become less accurate for two reasons. One is that the basic source data, as the economy has changed, have not kept up with those changes. So that we have less adequate data, both in terms of scope and in terms of accuracy to go into the GNP estimates.

On the other hand, we've had the work force drop in BEA roughly from 470 to 370. We have not had adequate people to make as much investment as we have had depreciation in the techniques. As a result, last year, for example, we suspended one of our three major reports on GNP, the GNP by industry.

I think that I could go on. Retail sales, for example, is another problem. And if you would like me to go on, I will. But I think that——

Mr. **Dwyer**. That's just fine.

Mr. **Darby**. I think that it has been pervasive.

STOP THE QUALITY DETERIORATION AND MODERNIZE THE SYSTEM

Mr. **Dwyer**. In your Economic Analysis statement, you indicate you are requesting an increase of $1.9 million to stop the deterioration in the quality of the U.S. national economic accounts, and $1.6 million to modernize and extend the U.S. national economic accounts.

What is the difference between the two initiatives?

Mr. **Darby**. The first one, to stop the deterioration, is basically trying to do what we are doing already. That involves things like developing measures of prices for new goods, especially the high tech goods. We have done that with computers, but there are a lot of other areas of business investment where we haven't done that. Also, developing measures of activity in the nonprofit sector where we lack information. That's one notion.

The $1.6 million for extending the accounts is aimed to make the first steps towards making the accounts consistent between, on the one hand, the national income accounts and, on the other hand, the balance of payments accounts by putting in the linkages—in effect going from single to double-entry bookkeeping. And, more broadly, that will take us very close to meeting the international standards of the System of National Accounts.

When we get to that point, instead of having to reinvent the wheel and fund all the research and methodology ourselves, we will be able to use the international statistical community's research that underlies the system of national accounts. And we also will not have to, every time we try to compare our statistics with Japan's or the United Kingdom's or Germany's, make these various conversions because we will be on the same basis.

Mr. **Dwyer**. I have to go vote. Thank you.

Mr. **Darby**. Thank you, sir.

SEQUESTRATION

Mr. **Smith** [presiding]. As you know, we had to reduce your budget request last year—not just yours, everybody's. Almost all the departments and agencies got some reduction. How are you handling that?

Mr. **Darby**. Well, I think that the main way we've handled it is, if you will, by triage. It was clear that we couldn't do everything we were doing with that reduction.

We have proposed to our Appropriations Committees, a reprogramming to eliminate the econometric model and to consolidate and simplify the data that had been published in the *Business Conditions Digest* so that we could put out just one larger publication of the Survey of Current Business.

Mr. **Smith**. Are those two items that you don't get reimbursed for?

Mr. **Darby**. Yes, sir. That would free about 20 people to shift into the GNP and international accounts where, otherwise, we would face the threat of having to suspend more of the reporting of either the Gross National Product, or possibly go back on our schedule for getting out the international investment data.

Mr. **Smith**. In order to pass a supplemental, we have got to show there is a dire emergency and/or an offset. Have you proposed any offsets?

Mr. **Darby**. With the reprogramming we are attempting to eliminate the econometric model and just shift the people to doing other work.

Mr. **Smith**. I see.

Mr. **Darby**. So it is an offset.

Mr. **Smith**. Will it be the same number of dollars?

Mr. **Darby**. Same number of dollars, same number of people doing different jobs, concentrating on the highest priority.

Mr. **Smith**. Mr. Rogers?

ECONOMIC POLICY COUNCIL

Mr. **Rogers**. You mentioned the working group of the Economic Policy Council and their recommendations.

What was the impetus for that report?

Mr. **Darby**. Well, I think that there is a recognition in business and academic communities that the economic statistics had deteriorated. With that growing recognition, when the President was elected, he asked Mr. Michael Boskin, now Chairman Boskin, to join him from Stanford University. Correcting this deterioration was one of, if not the top of Mr. Boskin's priorities.

When I was asked to take this job, I thought that was one of the few things—to try and help repair the economic statistics—that would make any empirical economist feel compelled to come.

So it was a great honor to try and engage in this effort.

Mr. **Rogers**. How was it undertaken?

Mr. **Darby**. Secretary Brady organized a group with Mr. Boskin as chairman of the working group. Most of the major statistical agencies and users—we even got the Federal Reserve represented—participated in this group to try and see what we could do quickly to stop the deterioration and begin to repair the damage to the statistical system, and what we should be doing in the long run.

So that was looking at both what can be done on a cost-effective basis, and what are the most important problems.

The group got its report together in the late fall or very early winter, went to the President, and then Chairman Boskin last month reported the President's endorsement for this initiative. They are incorporated—at least the first steps—in this document.

The working group is continuing, and will be aiming to develop long range plans of what further can be done.

I think that realistically we're talking about a relatively small number of additional people, just in terms of what's available, and what's available in terms of the professional market and in terms of actual numbers. And so it is going to take time.

Mr. **Rogers**. Have the concerns principally been from within the Government or from the private sector, or where?

Mr. **Darby**. There's a consensus now. Within the Government there are concerns that the kind of problems we've seen could lead to major policy mistakes in monetary policy or elsewhere. That's a concern that's real. That concern is felt in the private sector since the private sector suffers very directly from such policy mistakes. It also has affected business planning.

The academic economic community has become increasingly aware that we know less than we thought we did. That may be the most dangerous thing, thinking that we know something that is not so.

Mr. **Rogers**. That's all, Mr. Chairman.

Mr. **Smith**. Okay. Thank you for coming, Mr. Darby.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY CONGRESSMAN SMITH

FY 1990 SEQUESTER

Question. How much was sequestered in the appropriation for FY 1990 and what is the impact of that reduction in your programs?

Answer. The FY 1990 Economic and Statistical Analysis appropriation was sequestered $242,000. As a result four positions will remain unfilled in the following areas; National economic accounts (1 position), analysis of business trends (1 position), International economic accounts (1 position), and Policy support (1 position).

U.N. SYSTEM OF NATIONAL ACCOUNTS

Question. In your statement you indicate that the second effort would make the national economic accounts much more comparable with the national accounts of other nations. What are the major differences between the U.S. national accounts and the national accounts of other nations?

Answer. The comparison that follows contrasts BEA's current system to the System of National Accounts (SNA), which is being developed as an international standard by the United Nations.

Current	SNA
No capital account for government—all purchases are expensed..	Capital account for government
No national balance sheets	National balance sheets reconciled with income accounts.
No functional detail on many problems that loom large in the 1990's and beyond such as R&D, pensions, education and training, health, and natural resources.	Allows functinoal detail in satellite accounts that cut across sectors.
Must be converted for international comparisons; idiosyncratic system requires extra U.S. investment in accounting research.	Basic international system—data directly comparable; can captialize on international research on national accounting.

BALANCE OF PAYMENTS AND INTERNATIONAL INVESTMENT

Question. You are also requesting an increase of $1.1 million to improve the quality of the balance of payments estimates, and related analyses and an increase of $2.3 million to improve the quality of international direct investment data. Please give us some specific examples of the problems that you are trying to correct with these requested increases.

Answer. ESA will implement the following corrective actions in areas where methods are weak or the source data is inadequate. Problems to be addressed in the balance of payments accounts include the following:

The net international investment position is not measured consistently in current prices. Some types of investment—particularly direct investment—are estimated using book values. Consequently, the position does not accurately portray the relative sizes of U.S. investment abroad and foreign investment in the United States.

Although substantial progress has been made, gaps remain in the coverage of international services in the balance of payments. The two most substantial items that are not covered are (1) services provided by U.S. banks and other financial institutions for which fees are received and (2) truck transportation to and from Canada and Mexico. Also, the current quarterly estimates for many types of international services that are obtained as projections of annual survey results need strengthening.

Problems to be addressed in the international investment data include the following:

More detailed State and industry information on foreign direct investment in the United States is needed in order to fully assess the impact of such investment on the U.S. economy. Also, there is a demand for more promptly available and more frequent information on new acquisitions by foreigners.

Compliance rates in the international surveys have dropped some; this must be addressed. Resources are needed to restore and to maintain high levels of compliance.

BEA's capability to analyze the data it collects has diminished as resources have been shifted to keeping up with the increased workload. If the data are more fully analyzed, much can be learned about the costs and benefits of direct investment.

ECONOMIC POLICY

Question. What have been the consequences for policy makers as a result of not improving the quality of these estimates?

Answer. Policy analysis is depending on estimates that are mismeasured.

Examples of measurement problems:

BEA estimated the *net international investment position* of the United States for 1988 at a deficit of $533 billion. Other research suggests BEA's estimate may be overstated by as much as $300 to $500 billion.

Two years ago, when a major policy issue was whether the economy was overheated, *BEA's estimate of real GNP, based on 1982 dollars, was averaging more than one-half a percentage point higher than a measure based on more up-to-date dollars.* BEA was aware of the problem, but lacked funds to carry out needed calculations.

BEA's *overstatement of manufacturing's contribution to real GNP* over the last decade has distorted analyses of productivity. The problem was identified by outside researchers.

Estimates of international services that BEA introduced in June 1989 indicated that exports of services had been understated by 12 percent in 1988 and that imports of services had been understated by 7 percent. The deficit on the current account was $9 billion lower in 1988 than had been thought.

Mismeasurement is still waiting to be quantified in a number of areas, including: *underground economy, construction, price changes for high-tech goods, and international services provided by U.S. banks.*

BUDGET PRIORITIES

Question. How woud you rank each of the proposed program increases for FY 1991? What are your priorities?

Answer. ESA's proposed program changes represent a comprehensive package for improving its economic statistics. Two of the requests will provide resources to stop the deterioration of the quality of what the Bureau of Economic Analysis now does. The requests for the national economic accounts and the balance of payments estimates will be used to develop improved methodologies for estimates that have become inaccurate because of the rapidly changing nature of the economy.

The request to modernize and extend the national economic accounts calls for the United States to replace its present system of accounts with a new system based on the United Nation's System of National Accounts (SNA). The SNA provides a more powerful, more useful system of accounts that is being adopted by other major Western countries. Because the new system will be built upon the present system, first it is necessary to repair the foundation provided by the present system.

The foreign direct investment request will provide the resources to develop more State and industry detail for foreign owned enterprises, to improve survey compliance rates, and to respond to requests for information.

WEDNESDAY, FEBRUARY 28, 1990.

BUREAU OF THE CENSUS

WITNESSES

DR. MICHAEL R. DARBY, UNDER SECRETARY FOR ECONOMIC AFFAIRS
DR. BARBARA EVERITT BRYANT, DIRECTOR, BUREAU OF THE CENSUS
C. LOUIS KINCANNON, DEPUTY DIRECTOR, BUREAU OF THE CENSUS
JOSEPH P. BELLOMO, CHIEF, BUDGET DIVISION

Mr. SMITH. Next we will hear from the Bureau of the Census. Here to testify are Under Secretary Darby and Barbara Bryant, Director of the Census Bureau.

At this point we will insert the budget justifications submitted in support of this request.

[The justifications follow:]

1/ A proposed reorganization has been approved (March 6, 1989) by the Department of Commerce; however, it has not yet been administratively implemented. We will provide a revised chart when the reorganization becomes effective.

Department of Commerce
Bureau of the Census

GENERAL STATEMENT

The FY 1991 President's budget request for the Census Bureau is $431.3 million, 6,579 permanent positions, and 9,152 FTE. Compared to the FY 1990 enacted budget (adjusted for sequestration), the FY 1991 request represents a decrease of $983.4 million and 47,573 FTE. Of this decrease, nearly $993 million and 47,692 FTE are related to the reduction of Decennial Census activities; they are offset by approximately $11.7 million in program enhancements.

The following summary provides a comparison between the FY 1990 appropriation currently available and the FY 1991 estimate, and the related data on current employment.

(Dollars in thousands)

	1990 Currently avail.		1991 Estimate		Inc.(+)/Dec.(-)	
	Perm. Pos.	Amount	Perm. Pos.	Amount	Perm. Pos.	Amount
Salaries and expenses....................	2,230	$99,890	2,402	$115,233	172	$15,343
Periodic censuses and programs...........	3,544	1,314,836	4,177	316,104	633	(998,732)
Total........................	5,774	1,414,726	6,579	431,337	805	(983,389)

The FY 1991 request reflects the immense statistical tasks facing the Census Bureau in the 1990's. It allows the Census Bureau to provide social, economic and trade statistics and analyses which will be accurate, timely and useful. It also allows the Bureau to seek quality improvements in its statistical data products, and to expand its capabilities to meet the ever-growing need for more data. The FY 1991 request includes completion of data collection activities for the 1990 Decennial Census, early planning and testing for the 2000 Decennial Census, improving demographic statistics, improving statistics on service-sector economic activity, and improving U.S. trade data.

In FY 1991, the major decrease in resources required reflects the transition of the Decennial Census from the highly labor-intensive field operations conducted in FY 1990 to processing, tabulation, and publication of data in FY 1991. While budget resources decrease significantly, the FY 1991 program is important because it is the year that we achieve our goals for delivering apportionment counts to the President and redistricting data to the states. FY 1991 is the first year that the official results of the 1990 census enumeration will be available to the public. We begin release of the 1990 census data products whose quality and timeliness depend on the success of the preparatory and census operations that preceded them.

In early FY 1991 we will complete the local review program which allows local officials to review and identify problems with the 1990 census counts. This is the last data collection operation, after which we will close the final set of district offices. Also, we will complete data capture operations and begin creating the data files that form the basis for all publications that will be released. The need for adequate resources in FY 1991 is critical, because delays could jeopardize our ability to meet our mandated deadlines and to ensure timely release of data products.

Highlights of FY 1991 request. The FY 1991 program changes for the Census Bureau by appropriation, and a brief summary of each of these current and periodic program changes are as follows:

Salaries and Expenses. For FY 1991 the budget request for the Census Bureau includes program changes totaling $10.0 million, 201 permanent positions, and 213 FTE for the Salaries and Expenses appropriation.

The FY 1991 budget request for the Salaries and Expenses appropriation includes five reductions to the base totalling 25 permanent positions, 25 FTE, and $1,225,000. In the Manufacturing Statistics subactivity, the base for Current Industrial Reports will be reduced by 5 permanent appointments, 5 FTE, and $222,000, and the base for Special Industrial Characteristics (the Survey of Plant Capacity Utilization) will be reduced by 7 permanent positions, 7 FTE, and $314,000. In the Government Statistics subactivity, the base for the Government Finance Survey will be reduced by 6 permanent positions, 6 FTE, and $209,000. In the Demographic Reports subactivity, the base for Population Estimates and Projections will be reduced by 7 permanent positions, 7 FTE, and $349,000. In the Data Systems Development subactivity, the base will be reduced by 0 permanent positions, 0 FTE, and $131,000.

Business Statistics (91 permanent positions, 91 FTE, and $3,910,000). Program improvements are requested in Current Retail Trade Reports, and Current Service Trade Reports.

Improvements to retail trade reports (19 permanent positions, 27 FTE, and $1,069,000). The Advance Monthly Retail Sales Survey (MARTS) provides advance retail sales estimates, based on early reporting by a small subsample of the larger monthly retail survey panel; it is a principal economic indicator. This program increase will improve the overall quality of the MARTS by reducing non-sampling problems, explore electronic reporting to accelerate response and reduce reporting burdens, reduce biases associated with telephone follow-up interviews, improve data editing, and perform content evaluation studies.

Improved and expanded service statistics (72 permanent positions, 64 FTE, and $2,841,000). Service industry data are critical to measure overall economic activity. This request provides needed improvements to Gross National Product (GNP) source data on services. This initiative is essential for improving the quality of the national income and product accounts, input-output tables, and for productivity and price measurements.

The components of this request are:

Improved measurement of services purchased by industry (16 permanent positions, 10 FTE, and $523,000). This component involves the collection of data on industry purchased services on an annual basis. These data will improve significantly the reliability of the annual and benchmark input-output tables and the derivative estimates of gross national product originating by industry.

Improvement of small company financial data (12 permanent positions, 14 FTE, and $418,000). Comprehensive measures of the financial performance of the small business sector are deteriorating. This component provides for quality improvements in small company financial data by enhancing the sample. It includes broader asset size coverage, greater precision in estimates by industry, and more complete publication of data by asset size.

Expanded corporate financial data (9 permanent positions, 8 FTE, and $450,000). Although quarterly corporate profits data are essential to the calculation of the GNP and the Federal Reserve's flow of funds accounts, such data for the service sector have never been collected by any Federal agency. This initiative is the first step in covering the service sector through a quarterly survey program.

Collect annual detail for more service industries (23 permanent positions, 22 FTE, and $1,050,000). This initiative will provide detailed data items for selected areas of the industry which have changed the services being provided to businesses and consumers, and how the services are being delivered, in order to understand the expenditure patterns and to improve the accuracy of the GNP measures.

Emerging industries (12 permanent positions, 10 FTE, and $400,000). This initiative will identify and publish new data for emerging growth industries in the manufacturing, construction, wholesale, retail and service areas.

Manufacturing statistics (57 permanent positions, 52 FTE, and $2,450,000). Business investment and capital goods data are critical to evaluating productivity growth, competitiveness, capacity utilization, and the projection of the overall economic performance of U.S. industry. This initiative will provide a new annual survey to collect new and anticipated investment data from all business sectors at the national level using a probability sample (43 permanent positions, 38 FTE, and $2,000,000).

In addition, this increase will improve the quantity and quality of responses to the Manufacturers' Shipments, Inventories and Orders (M3) Survey, currently the only source of broad based monthly statistical data on the economic conditions in the U.S. domestic manufacturing sector (24 permanent positions, 24 FTE and $900,000). Specifically, it will reduce the reporting burden per respondent by introducing a probability sample of medium and smaller companies designed to minimize the reporting burden per respondent through rotating samples and other innovative sampling techniques; and will investigate the possibility of collecting other relevant economic data items such as orders for export.

We will eliminate selected Current Industrial Reports (-10 permanent positions, -10 FTE, and -$450,000).

General economic statistics (4 permanent positions, 6 FTE, and $575,000). The Standard Industrial Classification (SIC) system is one of the most important tools developed to promote comparability of establishment statistics describing various facets of the U.S. economy. The 1987 SIC revision was the first major revision in 15 years and brought significant improvements. In FY 1991, the Census Bureau will expand its research in the following areas: (1) research how structural changes in establishment operations impact on the SIC coding; (2) research methods for identifying new technologies and new industries; (3) research the impact of contract services on SIC coding; and (4) research methods of increasing industry comparability with the Harmonized System. The program increase will allow the Census Bureau to provide a proper classification structure for all newly emerging industries, specifically those in the expanding service sector. It will also provide the resources to measure the Harmonized System's impact on the industry classification system (4 permanent positions, 6 FTE, and $375,000).

This request will also fund the Census Bureau's participation in the National Trade Data Bank (NTDB), required by the Omnibus Trade and Competitiveness Act of 1988, Subtitle E, Part I, which calls for the Department of Commerce to establish and operate the NTDB by August 1, 1990. Specifically, this increase will provide funds for development activities which include the design of the data bases, and development of mainframe computer programs for the operation of the NTDB, for loading data into the data bank, for updating data, and for distribution of data to distributors (0 positions, 0 FTE, and $200,000).

Foreign trade statistics (13 permanent positions, 10 FTE, and $500,000). With major trade issues presently at the forefront, this program increase will provide a comprehensive Census program to assess and improve the quality of detailed foreign trade data. Specifically, the Bureau will conduct mail and telephone surveys of exporters to verify and correct statistical data; to verify import data using commercial documents required by the U.S. Customs Service; to conduct audits of export operations and documentation at Customs ports of exit to measure suspected undercount; to increase its educational effort directed toward exporters, importers and brokers; and to study the process of compiling data as a means of measuring errors which result from the processing operations.

Agriculture statistics (-14 permanent positions, -14 FTE, and -$414,000). We will eliminate the Cotton Ginning Report.

Demographic surveys (49 permanent positions, 67 FTE, and $2,826,000). The current processing system which produces the Current Population Survey is outmoded. The program increase will fund the initial phase of redesigning and reprogramming the Current Population Survey (CPS) (15 permanent positions, 10 FTE, and $826,000). The Census Bureau will modernize the CPS processing system by integrating Computer-Assisted Telephone Interviewing (CATI) and Computer-Assisted Personal Interviewing (CAPI), converting clerical coding, employing the latest data base management and data storage technology, providing direct access by users.

The Survey of Income and Program Participation (SIPP) provides comprehensive information on the economic resources of the U.S. population and on how public transfers and tax programs affect their financial circumstances. The survey's original sample design called for introducing a new sample panel of 20,000 households annually to produce survey estimates with only small biases. Because of budget constraints, the Census Bureau has been unable to maintain this sample size. The sample restoration funded by this initiative will begin by introducing a new panel of 14,000 households in February 1991. This restoration process will build on the survey restructuring that was introduced in FY 1990. This restructuring involved the design and implementation of a single, larger 1990 Panel (21,000 interviewed households). Restoration of the full sample for SIPP estimates will produce longitudinal data, such as intrayear transitions into and out of poverty and the characteristics of persons and families who become eligible for government assistance programs or those who no longer are eligible due to changing economic circumstances. The reliability for these longitudinal estimates will improve by 20 percent as a result of the full sample restoration (34 permanent positions, 57 FTE, and $2,000,000).

Demographic reports (1 permanent positions, 1 FTE, and $250,000). During FY 1991, we will examine basic metropolitan statistical areas (MSA) concepts in light of changing work patterns, population distribution, and available technology. We will fund contracts and/or a conference to identify and analyze alternative MSA concepts and develop associated statistical standards (1 permanent position, 1 FTE, and $250,000).

Data systems development (0 permanent positions, 0 FTE, and -$119,000). We will reduce the Data Systems Development subactivity.

Periodic Censuses and Programs. The FY 1991 budget request for the Census Bureau also includes a funding shift for the 1992 Economic Censuses, and a program enhancement for the 2000 Decennial Census.

Economic censuses (7 permanent positions, 7 FTE, and $1,300,000). This funding shift will significantly improve census planning and processing without increasing the total cost of the 1992 Economic Censuses. The Census Bureau proposes to reallocate funding from FY 1994 (25 permanent positions, 25 FTE and $5,000,000) to

FY 1991 (7 permanent positions, 7 FTE, and $1,300,000) and FY 1992 (18 permanent positions, 18 FTE, and $3,700,000) for the 1992 Economic Censuses. This resource shift will devote additional resources to vital planning activities. Changing and emerging data requirements, combined with significant changes in corporate structure and recordkeeping practices demand that we devote more resources to 1992 census planning relative to prior censuses.

2000 Decennial Census (11 permanent positions, 8 FTE, and $747,000). Funds will be used for early planning for the next census, especially to examine the need for innovative changes to meet future challenges and to test the effects of those changes on cost, quality and timeliness. Planning and procurement of automated systems require great lead times. House of Representatives Report 99-669 in particular suggests that research and development begin early on future census automation systems. Test censuses need to be started earlier, particularly if far reaching changes are being considered, with more time between each to allow for sufficient analysis of results. Lastly, early preparations are necessary to gain consensus among the various users and agencies dependent on decennial census information, and to allow time for any necessary legislative review.

(Direct obligations in thousands)

	Perm Pos.	Amount
Transfer	(4)	0
This transfer to Economic and Statistical Analysis, Reimbursable, of four positions is in support of the National Trade Data Bank which is required by the Omnibus Trade and Competitiveness Act of 1988 (Subtitle E, Part I).		
Delete unfunded positions	(23)	0
Realignment of FTE and positions to agree with funding availability.		
Adjustment for 1990 pay increase and related costs:		
Total cost in 1990 of pay increase	0	$1,872
Less amount absorbed	0	(1,872)
Anticipated 1990 pay increase supplemental	0	0
Amount in 1991 to provide full-year cost of pay increase	0	2,512
Less amount absorbed	0	0
Subtotal, adjustment for 1990 pay increase	0	2,512

Effective January 1, 1990, Federal employees received a 3.6 percent pay increase. In 1990, Census is absorbing the full cost of this pay increase.

	Perm Pos.	Amount
Adjustment for 1991 pay increases and related costs:		
Total cost in 1991 of general pay increase	0	2,038
Less amount absorbed	0	(1,019)
Subtotal, adjustment for 1991 general pay increase	0	1,019
Total cost in 1991 of SES pay increase	0	154
Less amount absorbed	0	(77)
Subtotal, adjustment for 1991 SES increase	0	77
Total adjustment for 1991 pay increases	0	1,096

	Perm Pos.	Amount
Full year cost in 1991 of positions financed for part year in 1990	0	$124

An increase of $124,182 is required for full year cost in 1991 of positions financed for part year in 1990. The computation is as follows:

	FTE	Amount
Annual salary of new positions in 1990 request to Congress	21	$403,448
Less 5 percent lapse	0	-20,172
Full year cost of personnel compensation	21	383,276
Personnel benefits at 27 percent	0	103,485
Full-year cost of personnel compensation benefits	21	486,761
Personnel compensation and benefits included in 1990 request	-18	362,579
1991 Adjustment to base	3	124,182

	Perm Pos.	Amount
Additional compensable days	0	258

FY 1991 has 261 compensable days compared to 260 in FY 1990. The cost of this extra day was calculated by dividing the FY 1990 salaries and related benefits by 260.

	Perm Pos.	Amount
Civil Service Retirement System (CSRS)	0	(176)

The number of employees covered by CSRS will continue to drop as positions become vacant and are filled by employees who are covered by the Federal Employees' Retirement System. We estimate the percentage of payroll of employees who are covered by retirement systems will drop from 66.8 percent for CSRS in 1990 to 62.4 percent in 1991. This will result in a decrease of 4.4 percent in the cost of CSRS contributions, for a decrease of $175,757. ($57,064,000 x .07 x .044)

	Perm Pos.	Amount
Federal Employees' Retirement System (FERS)	0	332

The number of employees covered by the FERS will continue to rise as employees covered by CSRS leave and are replaced by employees covered by FERS. We estimate that the percentage of payroll of eligible employees covered by FERS will rise from 33.2 percent in 1990 to 37.6 percent in 1991. In addition, the agency's contribution for basic benefits will rise from 12.97 percent to 13.0 percent. The calculations for increased costs for basic benefits are:

Payroll subject to retirement systems ($57,064,000)	
Basic benefit cost in 1990 ($57,064,000 x .332 x .1297)	$2,457,199
Basic benefit cost in 1991 ($57,064,000 x .376 x .1300)	2,789,288
Increase in basic benefit contributions (1991 minus 1990)	332,089

	Perm Pos.	Amount
Thrift Plan	0	$50

The cost of agency contributions to the Thrift Savings Plan will also rise as FERS participation increases. The percentage of payroll of employees covered by FERS will increase from 33.2 percent in 1990 to 37.6 percent in 1991. We estimate the agency contribution will be 2 percent. The increased cost for contributions to the Thrift Savings Plan are:

Payroll subject to retirement systems ($57,064,000)	
Basic benefit cost in 1990 ($57,064,000 x .332 x .02)	$378,905
Basic benefit cost in 1991 ($57,064,000 x .376 x .02)	429,121
Increase in basic benefit contributions (1991 minus 1990)	50,216

	Perm Pos.	Amount
Federal Insurance Contributions Act (FICA)	0	171

Employees covered by CSRS are not covered by Old Age, Survivors, and Disability Insurance (OASDI) but are covered by Hospital Insurance (Medicare). All other employees are covered by both OASDI and Medicare. As the percentage of payroll covered by FERS rises, the cost of OASDI contributions will increase. In addition, the maximum salary subject to FICA tax will rise to $32,725 in 1991 from $30,025 in 1990, and the OASDI tax rate will increase from 6.17 percent in FY 1990 to 6.20 percent in 1991. This will result in an increase of $171,150 as follows:

OASDI:

FERS payroll subject to FICA tax in 1990 ($57,064,000 x .3320 x .9551)	$18,094,606	
FERS OASDI tax in 1990 ($18,094,606 x .0617)		1,116,437
FERS payroll subjecty to FICA tax in 1991 ($57,064,000 x .3760 x .9661)	20,728,703	
FERS OASDI tax in 1991 ($20,728,703 x .0620)		1,285,180
Increase (1991 minus 1990)		168,743
Other payroll not covered by retirement systems ($2,485,000)		
Other payroll subject toFICA tax in 1990 ($2,485,000 x .9551)	2,373,424	
OASDI tax in 1990 ($2,373,424 x .0617)		146,440
Other payroll subject to FICA tax in 1991 ($2,485,000 x .9661)	2,400,759	
OASDI tax in 1990 ($2,400,759 X .0620)		148,847
Increase (1991 minus 1990)		2,407
Total OASDI increase		171,150

	Perm Pos.	Amount
Medicare	0	$ 9

All employees are subject to medicare contributions. The rate will remain 1.45 percent, but the percentage of payroll subject to FICA will increase from 95.51 percent in 1990 to 96.61 percent in 1991. The cost of medicare will increase as follows:

Total payroll ($59,389,000)	
Total payroll subject to FICA in 1990 ($59,389,000 x .9551)..	$56,722,434
Total payroll subject to FICA in 1991 ($59,389,000 x .9661)..	57,375,713
Increase in payroll subject to FICA (1991 minus 1990)........	653,279
Increase in Medicare tax ($653,279 x .0145).............	9,473

	Perm Pos.	Amount
Health Insurance	0	557

Office of Personnel Management has estimated that the Government's contribution to the Federal Employees' Health Insurance premium plans has increased by an average of 28 percent. Applied against a base of $1,990,000 the increase equals $557,200.

	Perm Pos.	Amount
Employees' Compensation Fund	0	148

The increase in the repayment to the Employees' Compensation Fund is the result of higher costs in the year ending June 30, 1989 than in the year ending June 30, 1988. The FY 1989 charges of $566,497 will be reimbursed to the Department of Labor Employees' Compensation Fund in FY 1991 pursuant to 5 USC 8147. The 1988 bill was $418,199.

	Perm Pos.	Amount
Rent Payments to GSA	0	324

GSA rates are projected to be approximately 4.4 percent higher in FY 1991 compared to FY 1990. Applied against a base of $7,371,000 the increase equals $324,324.

	Perm Pos.	Amount
FTS-2000		(674)

Following implementation of FTS-2000, GSA anticipates lower rate charges for telephone services.

	Perm Pos.	Amount
Printing and reproduction The cost of printing, both paper and labor, continues to increase. The increase was calculated by applying the U.S. Government Printing Office (GPO) estimated 7 percent increase for 1991 over 1990 to the FY 1990 estimate of $2,653,000.	0	$186
Working capital fund The increase for the Working Capital Fund is the Bureau of the Census' share of increased costs for this service.	0	54
Other services The increase will be used to offset inflationary increases for non-government contracts and other services.	0	324
Supplies and materials The increase in the cost of supplies is based on the GNP deflator of 4.2 percent applied to the FY 1990 estimate of $1,676,000.	0	70
Total	(29)	$3,365

1. For expenses necessary for collecting, compiling, analyzing, preparing, and publishing statistics, provided for by law, $115,233,000.

    13 U.S.C. 4, 6, 8(b), 12, 41-45, 61-63, 181, 182, 301-307; 15 U.S.C. 1516; 19 U.S.C. 1484, 2354, 2393; 44 U.S.C. 1343.

    13 U.S.C. 4 authorizes the Secretary to "perform the functions and duties imposed upon him by this title," or he may delegate any of them "to such officers and employees of the Department of Commerce as he may designate."

    13 U.S.C. 6, 8(b), 12, 41-45, 61-63, 182, 301-307 provide for (1) acquisition of information from other organizations, public and private; (2) conducting joint statistical projects with nonprofit organizations or agencies; (3) conducting mechanical and electronic developmental work as needed; (4) collection and publication of statistics on cotton ginning; (5) collection and publication of statistics on fats and oils; (6) conducting current surveys on statistical subjects covered by periodic censuses; and (7) compilation and publication of information on imports, exports, and mode of transportation.

    13 U.S.C. 181 provides that "The Secretary...shall annually produce and publish for each state, county, and local unit of general purpose government which has a population of fifty thousand or more, current data on total population and population characteristics and... shall biennially produce and publish for other local units of general purpose government current data on total population."

    15 U.S.C. 1516 provides that "The Secretary of Commerce shall have control of the work of gathering and distributing statistical information naturally relating to the subjects confided to his department...He shall also have authority to call upon other departments of the government for statistical data and results obtained by them; and he may collate, arrange, and publish such statistical information so obtained in such manner as to him may seem wise."

    19 U.S.C. 1484(e) provides that "The Secretary of the Treasury, the Secretary of Commerce, and the United States International Trade Commission are authorized and directed to establish... an

enumeration of articles...comprehending all merchandise imported into the United States and exported from the United States, and shall seek, in conjunction with statistical programs for domestic production and programs for achieving international harmonization of trade statistics, to establish the comparability thereof with such enumeration of articles.'

19 U.S.C. 2354 provides that 'Whenever the (International Trade) Commission begins an investigation...with respect to an industry, the Commission shall immediately notify the Secretary (of Commerce) of such investigation, and the Secretary shall immediately begin a study of:

(1) the number of firms in the domestic industry producing the like or directly competitive article which have been or are likely to be certified as eligible for adjustment assistance, and

(2) the extent to which the orderly adjustment of such firms to the import competition may be facilitated through the use of existing programs.'

19 U.S.C. 2393 provides that 'The Secretary of Commerce and the Secretary of Labor shall establish and maintain a program to monitor imports of articles into the United States which will reflect changes in the volume of such imports, the relation of such imports to changes in domestic production, changes in employment within domestic industries producing articles like or directly competitive with such imports, and the extent to which such changes in production and employment are concentrated in specific geographic regions of the United State.'

44 U.S.C. 1343 provides that 'In addition to the usual number of the Statistical Abstract of the United States, twelve thousand copies shall be printed: three thousand for the Senate, six thousand for the House of Representatives, and three thousand for distribution by the Secretary of Commerce.'

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Business statistics

Goals and Objectives

Goals:

The goal of Business Statistics is to provide current information on the U.S. distributive and service trade activity in total as well as for selected kinds of businesses and geographic areas.

Objectives:

The objectives of Business Statistics are to maintain and improve the quality and timeliness of the information collected; to expand the database on services; to ensure the continued focus of the program on statistics relevant to national needs; to provide local data for community planning; and to provide businesses with data for determining and enhancing the effectiveness of their operations.

Base Program

Current retail trade reports. This program provides monthly and annual estimates of retail sales, end-of-month inventories, and inventory/sales ratios. The monthly estimates consist of retail sales and inventories by detailed kinds of U.S. businesses, sales by major kind-of-business groups for the 4 regions and 9 geographic divisions of the United States, and sales by limited kind-of-business categories for the 25 largest metropolitan areas, 15 primary metropolitan statistical areas (PMSA), 5 cities, and 28 large states.

The Census Bureau provides advance sales estimates for the United States as a whole, based on early reports from a small subsample of the larger monthly retail survey panel, for the 12 major kind-of-business categories. This advance monthly retail publication is designated as one of the principal economic indicators. The media, including television newscasts and the financial pages of newspapers and magazines, regularly highlight the sales levels and trends from this report.

The annual portion of the Current Retail Trade program provides key measures of retail activity for intercensal years and is the basis for benchmarking monthly estimates of sales and inventories. The Annual Survey includes data by kinds of business at the national level on annual sales and year-end inventories, methods of inventory valuation, sales by legal form of ownership, accounts receivable balances, and costs of purchased merchandise.

Program output	Sample size	Universe
Monthly retail trade reports.................	12,500 firms	2.0 million firms
Advance monthly retail trade reports.........	3,200 firms (subsample)	2.0 million firms
Annual retail trade report...................	22,000 firms	2.0 million firms

Data user	Use
Bureau of Economic Analysis..................	Compute national accounts.
Council of Economic Advisers, Department of Treasury and other agencies.................	Monetary and fiscal policies.
State and local governments and private businesses.................................	Measure consumer activity.
Local areas.................................	Assess adverse conditions such as weather, strikes and resource shortages and plan recovery from these conditions.
Large and small retail firms.................	Determine market shares, develop forecast models, and past and potential changes in buying habits.

Current wholesale trade reports. This program provides monthly estimates of merchant wholesale trade sales, end-of month inventories, and stock/sales ratios, along with annual estimates of sales, inventories, methods of inventory valuation, purchases, sales/inventory ratios, and gross margins for merchant wholesalers by kind-of-business groups at the national level. The annual data provide the basis for benchmark estimates of sales and inventories, including the collection and publication of purchases and inventory valuation data.

Program output	Sample size	Universe
Monthly sales and end-of-month inventories...	3,500 firms	335,000 merchants; wholesale establishments
Annual sales, purchases, inventories and gross margins..............................	4,800 firms	Same

Data user	Use
Bureau of Economic Analysis, Federal Reserve Board, Bureau of Labor Statistics, Council of Economic Advisers...........................	Leading economic indicator to evaluate current economic conditions, and to develop fiscal and monetary policies.
Bureau of Economic Analysis..................	Compute national accounts, update industrial input-output tables between censuses, benchmark revisions to monthly series and revise GNP estimates.
Private businesses...........................	Develop forecast models and measure changes in buying patterns.

Current service trade reports. This program provides annual information on selected services in the United States. The Service Annual Survey (SAS) includes estimates of receipts for major service groups (hotels and motels; pesonal services; business, automotive, and miscellaneous repair services; social services; and health, legal and other professional services). Since FY 1985, there has been an incremental but consistent expansion to SAS. The Census Bureau added new industries that were covered only in the 5-year census and provided data for industries previously published at more aggregate levels. In FY 1988 detailed expense and/or revenue items were added for selected key industries including personnel supply services, arrangers of passenger transportation, and nursing and personal care facilities.

The Census Bureau initiated the Motor Freight Transportation and Warehousing Survey (WATS) in FY 1986. The survey produces detailed estimates of revenues and expenses for the trucking and warehousing industries, as well as inventories of revenue-generating freight equipment for the trucking industry. In FY 1987, the Census Bureau more than doubled the number of data items in the survey.

In FY 1990, the Census Bureau initiated the Annual Survey of Communication Services. This survey provides detailed estimates of revenues and expenses for the telephone industry, radio and television broadcasting, cable television, and other communication services.

Program output	Sample size	Universe
Service Annual Survey...........	20,500 firms	3 million personal and business service establishments.
Motor Freight Transportation and Warehousing Survey (WATS)...	1,500 firms	89,000 trucking and warehousing establishments.
Annual Survey of Communication Services........................	1,000 firms	30,000 telephone, radio and television broadcasing, cable TV, and other communication establishments.

Data user	Use
Bureau of Economic Analysis...........	Measure consumer activity and compute GNP accounts.
Bureau of Labor Statistics............	Develop price indexes and productivity measurements.
Department of Transportation..........	Policy development and program management and evaluation.
Private businesses....................	Project industry growth, measure performance against aggregate, and plan for changing patterns in consumer activity.
Trade and professional association..........................	Better understanding of volatile industry trends.

Statistical sample improvement. This program provides research, development and implementation of sample improvements for surveys conducted under the Business Statistics subactivity. This process includes redrawing samples, reviewing economic series and data relevant to trends in distributive and service industries, and making other quality improvements. These activities maintain or improve the quality of current survey estimates, and provide the basis for research on more efficient methods of survey processing with a view toward reducing respondent burden and survey costs.

The Census Bureau schedules sample maintenance, subsequent updates and quality improvements on a quarterly and annual basis. These updates improve coverage of the business universe and ensure accurate representation of those firms selected in the samples. These activities maintain current business survey information on the same classification basis and coverage as the most recent economic censuses, and they protect valuable economic time series from extensive and costly revision.

The Census Bureau also reselects samples periodically to redistribute respondent burden and minimize the sampling error. Specifically, in FY 1991 the Bureau will select new list samples based on the results from the 1987 economic censuses and updates from the 1988 and 1989 Company Organization Surveys. The updated measures of firm size and industrial classification will yield more accurate estimates. Other FY 1991 activities include the continuation of the automation plans for the collection, analysis, and processing of current business statistics leading to a more timely release of statistical information, enhanced accuracy of the data, and increased efficiency in survey operations. Part of this modernization program includes computer-assisted data collection for telephone follow-up for current business surveys.

	FTE	205		232		27	

Improvements to advance retail sales estimates (19 permanent positions, 27 FTE, and $1,069,000). The Advance Monthly Retail Sales Survey (MARTS) provides advance retail sales estimates for the United States, including broad kinds-of-business classification. These advance sales estimates are based on early reporting by a small subsample of the larger monthly retail survey panel. The information provided by this survey is deemed as a principal economic indicator. The primary users of these estimates include the Bureau of Economic Analysis, Council of Economic Advisers, and Federal Reserve Board. Responding directly to the Department's long-range goal to improve official economic and trade data analysis, the Census Bureau is requesting a program increase to improve the advance retail sales estimates data.

This program increase is designed to improve the overall quality of the MARTS. Desired improvements will be accrued by reducing non-sampling problems such as distortions caused by survey non-responses, very early collection and processing requirements, non-standard (4 and 5 week periods vs. calendar month) reporting patterns of survey respondents, and reducing or eliminating various other sources of non-sampling error.

Specifically, research to improve statistical methods will significantly reduce non-sampling error stemming from non-response, very early collection, non-standard reporting by survey respondents, the adjustments applied to that data prior to tabulation of tne estimates, and various other sources of bias. Approximately 40 percent of the advance sales estimates are developed from respondents who report on a non-calendar month basis. These data are adjusted to conform to a calendar month. Research into this adjustment methodology will lead to improved techniques designed to reduce biases associated with this process. In addition, research efforts will also assess the effect of non-response on the estimates. The biases incurred due to non-response are not well understood. Research efforts will determine the reasons why certain retail businesses do not respond to the advance survey. Knowledge gained from this research will produce methods to increase response as well as to reduce the residual biases associated with the remaining non-response. Approximately 65 percent of the sales estimate is based on respondent data; the remaining 35 percent is imputed or estimated from similar information provided by other responding businesses. As an important ancillary benefit, this research will have relevance to the larger Monthly Retail Trade Survey.

Other concurrent research activities addressing the non-sampling problems will be directed toward exploring electronic reporting alternatives to accelerate response and reduce reporting burden, reducing biases associated with telephone follow-up interviews, improving data editing, and performing content evaluation studies. These research activities will commence in FY 1991 with improved methodology supported by this research.

		1991 Base		1991 Estimate		Increase/(Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Current service trade reports..	Pos./BA	62	$3,149	134	$5,990	72	$2,841
	FTE	61		125		64	

Improved and expanded service statistics (72 permanent positions, 64 FTE, and $2,841,000). Service industry data are critical to measure accurately overall economic activity; one of the Department of Commerce's goals is "improving statistics of the services-producing sector of the world economy." This request provides needed improvements to Gross National Product (GNP) source data on services. While recent statistical-gathering efforts have brought about needed improvements, economic indicators used by the Federal Government to shape economic policy still do not adequately reflect the dominant role of services. This initiative continues the expansion of the Census Bureau's current services program. In the mid 1970's, the Advisory Committee on GNP Data Improvements, chaired by Daniel Creamer, recommended several improvements in the source data used to prepare the GNP accounts. Nearly 15 years later, several of the recommendations for improvements still are not implemented. Deregulation and the increased reliance, primarily in the private sector, on the GNP has resulted in a reexamination of the existence of data deficiencies which, perhaps, are more important now than they were then. This initiative is essential for improving the quality of the national income and product accounts, input-output tables, and for productivity and price measurements.

The components of this request are:

- Improved Measurement of Services Purchased by Industry (16 permanent positions, 10 FTE, and $523,000). Only limited data on services (personal, business, and professional services, insurance, or maintenance construction) purchased by industry are collected every 5 years on the economic censuses. No information is available on an annual basis. In the absence of such information, the input-output (I-O) analyst must allocate the costs of purchased services among industry subsectors, as well as between intermediate and final consumption. To compound the estimating problem, there are no satisfactory estimates of the total costs of many individual services. We estimate that our census data on value added in manufacturing is overstated by 30 percent or more as a result on not collecting information on the costs of purchased services.

This component involves the collection of data on industry purchased services. These data will improve significantly the reliability of the annual and benchmark I-O tables and the derivative estimates of gross product originating by industry.

This request will provide for the annual collection of data. We will begin discussions with companies on the reporting of these data at either the establishment, divisional, or company level as part of our 1989 Recordkeeping Practices Survey. Preliminary results from this survey are expected in the summer of 1990. In FY 1991 we will extend our discussions with companies and with the Bureau of Economic Analysis as well as with other primary users of the data. Also, we will develop the survey vehicle and pretest the questions. In 1992 we will begin the collection of data.

o Improvement of Small Company Financial Data (12 permanent positions, 14 FTE, and $418,000). The importance of the small business community to the vitality of the U.S. economy is well established, yet comprehensive measures of its financial performance are deteriorating. The official corporate profits data for wholesale and retail trade no longer reflect the current activity of small companies. These two sectors are heavily populated by small firms whose gross under representation in the sample significantly affect the accuracy of gross national product estimates. This component provides for quality improvements in small company financial data by enhancing the sample. It includes broader asset size coverage, greater precision in estimates by industry, and more complete publication of data by asset size. These improvements were developed at the request of Congress in fiscal years 1985 and 1986, but have not been implemented to date.

The Census Bureau will begin quarterly collection of financial data from 5,000 to 6,000 small mining, wholesale, and retail corporations in calendar year 1992. We will publish these data quarterly.

o Expanded corporate financial data (9 permanent positions, 8 FTE, and $430,000). Although quarterly corporate profits data are essential to the calculation of the Gross National Product (GNP) and the Federal Reserve's flow of funds accounts, such data for the service sector have never been collected by any Federal agency. This initiative is the first step in covering the service sector through a quarterly survey program. During FY 1991 and FY 1992, the Census Bureau will design and select a sample of business service corporations. These corporations will represent one-third of the service sector profits and have the available financial data needed for the survey. In the middle stages of this development process, the Census Bureau will design and test a questionnaire as part of the

Quarterly Financial Report (QFR) program. This will be similar to that used in the Census Bureau data collection from manufacturing, mining and trade corporations. The collections of quarterly data will begin in 1993; the data will be integrated in the QFR publication and press release.

- Collect annual detail for more service industries (23 permanent positions, 22 FTE, and $1,050,000). Selected areas of the industry have changed the services being provided to businesses and consumers, and how the services are being delivered. The single measure of total dollar revenue hides the true understanding of economic change in these areas. Also, growth in personal expenditures on health and recreational activities have been inadequately measured. Accordingly, detailed data items are needed to understand the expenditure patterns and to improve the accuracy of the GNP measures. This program increase will provide income and expenditure data for industries in business services (including computer and data processing; management, consulting, and public relations services; and equipment rental and leasing), automotive rental and leasing, amusement and recreational services and offices of health practitioners.

- Emerging industries (12 permanent positions, 10 FTE, and $400,000). The Census Bureau will initiate a new program in FY 1991 to identify and publish new data for emerging growth industries in the manufacturing, construction, wholesale, retail and service areas. The industries being considered for data expansion include: in the manufacturing area, automated material handling equipment, industrial robotics, and fiber optic cables; in wholesale, communication equipment and supplies, and prefabricated building and structural assemblies; for retail, warehouse buying clubs and home video shopping; and for services, complete courier services; telemarketing; drug and alcohol rehabilitation and day care for the elderly or mentally retarded. In addition the Bureau will evaluate other industries that show growth potential for possible inclusion in the surveys. For example, specialty automobile repair services (i.e., lubricating and tune-up services), self-storage warehousing, and catalog/directory publishing.

- Most government and many private data gatherers collect and publish information based on the Standard Industrial Classification (SIC). The SIC is reviewed and revised periodically to reflect the changing structure of the U.S. economy. A significant number of the U.S. growth industries are not assigned a unique industry classification. They are often grouped with other industries in large "catch all" categories which totally mask their true functions and influences on the U.S. economy.

- This initiative will provide a series of one-time surveys of one-time surveys to identify firms from the broad four-digit SIC level encompassing such emerging industries. These firms will be identified from the Census Bureau's Standard Statistical Establishment List (SSEL) which will be updated to reflect the results of the 1987 Economic Census.

  Questionnaires will be mailed to these firms requesting detailed kind-of-business information and basic financial and/or product data.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Construction statistics

Goals and Objectives

Goals:

The goal of Construction Statistics is to provide current data on the economic and social aspects of the U.S. construction activities such as authorized construction, housing starts, characteristics and prices of new housing, and value of new construction put in place.

Objectives:

The objectives of Construction Statistics are to maintain and improve the accuracy, reliability and timeliness of data to ensure that the data are pertinent to national economic and social needs; to maintain efforts to collect and provide information required for legislative and planning purposes at the national and local government levels; and to transmit timely information directly to state agencies.

Base Program

Construction permits data. This program provides monthly and annual statistics on the number and valuation of privately-owned housing units and nonresidential buildings that are authorized by building permits. Data collected monthly from a sample of 8,300 permit-issuing places are used to produce national, regional, and state estimates, as well as totals for selected metropolitan statistical areas and individual places. Annually, we collect data and make it available for permit-issuing places that are not in the monthly sample. The national estimate of housing units authorized by building permits is a component of the Index of Leading Economic Indicators. We also use data from this program to design samples for the Census Bureau's Survey of Construction and the Current Population Survey.

Program output	Sample size	Universe
Monthly permits data..........................	8,300 permit-issuing offices	17,000 permit-issuing offices
Annual permits data..........................	8,700 permit-issuing offices not in monthly sample	17,000 Permit-issuing offices

Data user	Use
Federal Reserve Board; Federal Home Loan Bank Board; and Department of Housing and Urban Development, and Bureau of Economic Analysis	Analyze national and regional economic and evaluation programs.
Financial institutions......................	Estimate mortgage demand.
Private businesses..........................	Market planning, material use and investment analysis.
State and local agencies....................	Local area planning and economic development.

Construction starts data. This program provides monthly statistics on the number of housing units started and the number of housing units authorized (but not yet started) for the United States and the four Census regions (Northeast, Midwest, South and West), as well as national data on ownership and number of units in structure. In conjunction with the Department of Housing and Urban Development, this program also collects information on the completion and sale of new housing units. Information on housing starts is a principal economic indicator. This program also develops and publishes quarterly and annual price indexes on residential construction based on financial and physical characteristics data collected in the sample survey.

Program output	Sample size	Universe
Monthly construction starts.................	41,500 buildings	980,000 - 1,100,000 buildings.

Data user	Use
Department of Housing and Urban Development and Congress...............................	Develop and evaluate housing programs.
Council of Economic Advisers, Federal Reserve Board, Office of Management and Budget and Bureau of Economic Analysis.....	Determine condition of economy and develop national income and product accounts.
Bureau of Economic Analysis.................	Constant dollar series for GNP.
Manufacturers..............................	Plan production schedules and establish market shares.
Other Federal agencies......................	Measure new housing cost changes.
Insurance companies and financial institutions..............................	Adjust rates and establish replacement costs. Estimate mortgage demand.

Construction value data. This program provides monthly, national estimates of the dollar value of new construction put in place by type of construction. The categories include residential and non-residential buildings as well as non-building construction such as highways and sewer projects. Monthly surveys provide data for state and local and most privately owned construction. The Census Bureau develops estimates on construction outlays for the remaining types of construction (except Federal) by using indirect measurements, analytical techniques and secondary data sources; and obtains Federal construction expenditures directly from the agencies.

This Construction Value Data program also provides quarterly data on expenditures by owners of residential property for upkeep and improvement. Data on improvements (additions, alterations and major replacement) provide an estimate on the total value of new construction put in place. It releases limited geographic and type-of-expenditure data on an annual basis. The annual estimates include information on the type of work, characteristics of the property such as value and age of the structure, and selected characteristics of the property owners.

Program output	Sample size	Universe
Monthly value data...........................	14,500 construction projects	150,000-200,000 projects
Quarterly upkeep and improvement expenditures..................................	2,400 rental properties and 4,500 owner-occupied units	Over 97 million units

Data user	Use
Bureau of Economic Analysis	Measure the structures components of the gross private domestic investment and state and local government expenditures in the GNP.
Council of Economic Advisers, Federal Reserve Board and other agencies	Determine condition of this key industry.
Private businesses (especially those providing construction materials)	Market planning, production scheduling, and investment planning.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Manufacturing statistics

Goals and Objectives

Goals:

The goal of Manufacturing Statistics is to provide current statistics measuring the overall performance of the U.S. manufacturing sector, and the investment behavior of all U.S. businesses.

Objectives:

The objectives of Manufacturing Statistics are to maintain and improve the quality and timeliness of the statistics and to focus on national statistical needs; to provide monthly data on the manufacturing sector as an aid to government policymakers and business economists in their analyses of the business cycle and monitoring of the effect of imports on domestic production; to provide continuing annual data at the national level on major labor, capital, and manufacturing material inputs, outputs and important characteristics such as capacity utilization; and to provide continuing quarterly data at the national level on expenditures for plants and equipment by U.S. businesses.

Base Program

Current industrial reports. This program supplements the product data collected in the Census of Manufactures with current measures of manufacturing activity in the United States. The surveys provide current data on 5,000 of the 12,000 total manufactured products, representing 30 percent of the more than $2.5 trillion value of shipments of all manufactured goods. Production and shipments information are the two common data items collected, but the program also collects other measures such as inventories, orders and consumption in a number of surveys. These surveys measure manufacturing activity in important commodity areas such as textile and apparel, chemicals, primary metals, computer and electronic components, industrial equipment and consumer goods. The law requires seven of these surveys on a monthly basis and four on a quarterly basis.

The Current Industrial Reports program uses nearly 100 mail surveys with a unified data collection, processing and publication system. The Census Bureau updates the survey panels for most reports annually and reconciles the estimates to the results of the broader-based Annual Survey of Manufactures and the Census of Manufactures. The content of each survey is updated periodically to ensure that the data continue to meet the needs of government and industry data users. To further improve the usefulness of the Current Industrial Reports program, the Census Bureau is increasing emphasis on the development and implementation of surveys which focus on the production of emerging technologies.

Program output	Sample size	Universe
Monthly, quarterly and annual data on production of about 5,000 manufactured products.................................	43,000 manufacturing establishments	369,000 manufacturing establishments

Data user	Use
Federal Reserve Board......................	Prepare monthly index of industrial production.
Bureau of Economic Analysis................	Prepare quarterly estimates of GNP.
International Trade Administration, International Trade Commission...........	Monitor effect of international trade on domestic production and meet responsibilities under Trade Act of 1974; assess production trends; and forecast future industrial activity.
Bureau of Labor Statistics.................	Develop price indexes and estimates of productivity.
Private industry...........................	Monitor effect of international trade on domestic production, evaluate relationship between company and industry performance, market analyses, assess current business conditions, and plan future operations.

Annual survey of manufactures. This program supplies the key annual measures of manufacturing activity. The data items include employment, payrolls, supplementary labor costs (fringe benefits), cost of materials, fuels consumed and capital expenditures; and output data such as shipments by industry and product class, shipments for export, and inventories by stage of fabrication. National estimates are provided by industry classifications as defined in the Standard Industrial Classification (SIC) for about 1,500 product classes. In addition, the program also compiles basic statistics such as employment and value of shipments for states.

Program output	Sample size	Universe
Annual statistics on inputs used and outputs produced by manufacturers..................	56,000 manufacturing establishments	369,000 manufacturing establishments

Data user	Use
Bureau of Labor Statistics..................	Calculate annual productivity series, update producer price indexes, and calculate weights when new components are added.
Federal Reserve Board........................	Prepare Index of Industrial Production.
Bureau of Economic Analysis..................	Prepare annual update of GNP and weight GNP deflators.
International Trade Administration...........	Design and evaluate export development program.
Commerce Industrial Outlook publication......	Evaluate and forecast future industrial activity.
Census Bureau................................	Benchmark and reconcile monthly and quarterly data on manufacturing production and inventories.
Private industry.............................	Plan operations, and make investment and production decisions.

Industrial indicators and business investment. The Manufacturers' Shipments, Inventories and Orders Survey (M3) provides the indicators of monthly changes and trends for the entire U.S. manufacturing sector. This report is one of the principal economic indicators for the United States. The shipments data are important coincident indicators of the business cycle; new orders and inventories are important leading indicators. The Wall Street Journal and the financial pages of other newspapers and magazines consistently highlight this information.

The Manufacturers' Shipments, Inventories and Orders Survey provides monthly data on the dollar volume of shipments, new and unfilled orders, and total inventories for 46 industry categories and 6 market categories. Also provided are data on inventories by stage of fabrication for 16 broader industry groups and separate data for household durables and the defense and non-defense portions of the capital goods industries. The Annual Survey of Manufactures data for the corresponding year are used to make historical benchmark revisions to shipments and inventory estimates.

The Plant and Equipment Expenditures Survey is another principal economic indicator for the United States. This survey provides critical data on investment plans in the manufacturing sector at the 2-digit Standard Industrial Classification (SIC) level and the non-manufacturing sectors by broad categories. It also provides data on actual investments as a current indicator of production capacity. The business sectors that account for a large proportion of investments are surveyed quarterly. The results of this survey are also prominently discussed in The Wall Street Journal and the financial pages of other newspapers and magazines.

Program output	Sample size	Universe
Monthly statistics on manufacturers' shipments, inventories, and new and unfilled orders.	4,100 manufacturing companies and divisions	318,000 manufacturing companies
Quarterly statistics on actual and planned expenditures on plant and equipment.	15,000 companies	4.5 million companies
Annual statistics on expenditures for plant and equipment.	25,000 companies	4.5 million companies

Data user	Use
Bureau of Economic Analysis....................	Prepare monthly index of leading economic indicators and quarterly estimates of GNP.
Council of Economic Advisers, Federal Reserve Board, and Departments of Commerce and Treasury, Congressional Budget Office.........	Analyze economic conditions, forecast future trends, and determine current economic policy.
Census Bureau.................................	Benchmark and reconcile monthly data on value of construction and quarterly data on expenditures for plant and equipment.
Private industry..............................	Plan operations, and make investment and production decisions.

Special industrial characteristics. The periodic surveys of Pollution Abatement Costs and Expenditures and the Plant and Equipment Pollution Abatement Expenditures surveys provide comprehensive estimates of capital expenditures and operating costs associated with pollution abatement activities by manufacturers and capital expenditures for selected nonmanufacturers' businesses. Because pollution abatement expenditures compete with productivity improvements for investment dollars, it is important to measure this cost component.

The Census Bureau collects separate data for capital expenditures and types of operating costs associated with the abatement of air and water pollutants and solid waste disposal for each manufacturing industry. The survey also includes payments to governments for pollution removal. State level data are published for major industry groups.

The Survey of Plant Capacity relates the actual level of manufacturing activity to the full production capability level of operation for the fourth quarter of the calendar year. The survey includes selected characteristics of manufacturing establishments such as the number of hours of plant operation and reasons for operating at less than full capacity. These establishment-based capacity utilization estimates show how changes in utilization rates affect important economic factors such as inflationary pressures, business investments and economic growth. Capacity utilization rates cover 4-digit Standard Industrial Classification Code (SIC) industries at the national level.

Program output	Sample size	Universe
Annual Survey of Pollution Abatement Costs and Expenditures...........................	16,000 establishments with 20 or more employees (subsample of the Annual Survey of Manufactures)	369,000 manufacturing establishments
Plant and Equipment Pollution Abatement Expenditures Survey.........................	500 companies (subsample of Plant and Equipment Expenditures Survey).	15,000 petroleum, mining, and electric utility
Annual Survey of Plant Capacity.............	9,000 establishments (subsample of the Annual Survey of Manufactures)	369,000 manufacturing establishments companies

Data user	Use
Pollution abatement:	
Bureau of Economic Analysis...............	Prepare estimates of capital expenditures and current costs for pollution abatement for GNP accounts.

Data User (cont'd)	Use
Environmental Protection Agency...........	Evaluate the effect of environmental legislative proposals and monitor regional environmental performance.
State and local governments and industrial organizations..............................	Develop regional economic and environmental performance measures and forecasts.
Private industry...........................	Formulate planning and investment decisions.
Private industry..............................	Formulate planning, investment and production decisions.
Plant capacity:	
Federal Reserve Board.......................	Benchmark current estimates of company capacity utilization.
International Trade Administration..........	Identify industries adversely affected by import penetration.
Economic Development Administration.........	Identify industries which warrant economic assistance.
Other government agencies...................	Evaluate industry's ability to expand and meet a crisis, particularly in defense related industries.
Private industry..............................	Formulate planning, investment and production decisions.

INCREASE FOR FY 1991
(Direct Obligations in thousands)

Activity: Current economic statistics programs
Subactivity: Manufacturing statistics

		1991 Base		1991 Estimate		Increase/(Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Industrial indicators and business investment.......	Pos./BA	67	$3,748	134	$6,648	67	$2,900
	FTE	45		107		62	

Investment survey (43 permanent positions, 38 FTE, and $2,000,000). Business investment and capital goods data are critical to evaluating productivity growth, competitiveness, capacity utilization, and the projection of overall economic performance of U.S. industries. This initiative provides an annual survey to collect new and anticipated investment data from all business sectors at the national level using a probability sample. The information sources currently used to estimate investment are inconsistent and incomplete. As a result, important fiscal and monetary policy decisions can be adversely affected.

In addition to providing new information on evaluating industrial productivity, competitiveness and capacity utilization, this proposed annual survey on investment will serve as a benchmark and statistically defensible frame for conducting the quarterly Plant and Equipment Expenditure Survey of New and Planned Investments, which was transferred to the Census Bureau from the Bureau of Economic Analysis in FY 1989. The purpose of the transfer is to improve the statistical soundness of the survey which has been severely criticized for not using statistical probability techniques in its estimation and for poor response. The proposed annual survey is critical to this effort.

The data collected will be actual expenditures for new and modernized plants, purchases of specific types of equipment including pollution abatement, information on leased plants and equipment, investments in capital goods from foreign sources, and expenditures for non-residential alterations, repairs and maintenance; and planned expenditures for the coming year. This amount of detail is critical in measuring the differential effects of technological, price and regulatory changes on production facilities in analyzing productivity growth, ability of the U.S. business sector to compete with foreign producers, utilization of plant capacity, and overall economic performance. The current measures of investment provide only gross measures of equipment and structures expenditures.

Development of the annual survey will be completed in FY 1991; actual data collection will begin in FY 1992; data will be reported beginning mid-1992.

Manufacturers' Shipments, Inventories and Orders (M3) Survey (24 permanent positions, 24 FTE and $900,000). The M3 Survey is currently the only source of broad based monthly statistical data on the economic conditions in the U.S. domestic manufacturing sector. These data provide critical information in the short term for assessing economic cycles and trends. They influence fiscal and monetary policy decision-making in the public sector and provide investment, marketing and production information to the private sector.

This initiative will provide improvements in the quantity and quality of responses to the M3 Survey, a reduction in the reporting burden per respondent through the introduction of a probability sample, and an investigation of collection of additional items of current economic relevance such as orders for export. Quantity and quality response improvements are essential. Quantity improvements will be based on increasing responses to the survey by large companies through intensified direct contact (personal visits) with company officials responsible for external reporting. A probability sample of medium and smaller companies will be implemented based on experience with a probability sample of the plastics industry now being tested. The probability sample will be designed to minimize the reporting burden per respondent through rotating samples or other innovative sampling techniques. As a by-product of direct contacts with the companies, the Census Bureau plans a response profile study to determine why some companies do not respond to surveys. Results of this will improve the Bureau's outreach techniques and have long-term effects on the quality of current economic data.

Improvement in the quality of responses is essential with large company respondents. The goal is to improve reporting of industry details through the intensifies company visit program. Negotiations will be conducted emphasizing the adaption of data already available within these companies' accounting procedures to the industry categories needed in the survey.

The Census Bureau plans to study the collection of additional data which have significant impact on the current status of the U.S. economy. With the continued importance of data on foreign trade, there is need for an indicator on future export activity. Intense negotiations with companies are necessary to assess the availability of information on orders for export and to solicit their cooperation in providing the data.

The annual data providing the benchmarks for the monthly survey will be improved by conducting a classification survey of new plants starting production each year to ensure adequate statistical representation. Currently, some portion of new plants are not assigned industry codes each year by the Social Security Administration. Data for these new plants are not included in the annual statistics until the new establishments have been classified in the Census of Manufactures which is conducted every five years. This results in understatement of annual estimates by a significant amount in selected industries and distortion of the year-to-year change data.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: General economic statistics

Goals and Objectives

Goals:

The goals of General Economic Statistics are to provide a centralized list of all U.S. business firms and their establishments; to provide uniform industry and commodity classification and coding; to publish County Business Patterns data; and to provide corporate financial statistics.

Objectives:

The objectives of General Economic Statistics are to maintain and update the Standard Statistical Establishment List (SSEL); to coordinate the development, maintenance, revision, and evaluation of industry and commodity classification and coding programs; to maintain and improve the quality of the data; and to continue the focus on data pertinent to national needs.

Base Program

Standard statistical establishment list (SSEL). The SSEL includes the latest available information on name, mailing address, physical location, industrial classification, size classification, company affiliation and legal form of organization for all employer firms and their establishments in the United States. This program provides the single source for determining and assigning industrial classifications to establishments and companies. It also provides a common frame of reference for use in selecting statistical samples.

Preparation of the SSEL reflects the continued coverage of multiple establishment businesses based on the Company Organization Survey (COS). The program includes updating the industrial classification for businesses, incorporating the changes in the company organization and geographic codes on a periodic basis, and operating the updated universe file for statistical users of the system.

The SSEL program also includes efforts to determine the business universe by compilation of administrative records for single establishment companies. The Census Bureau purchases quarterly and annual payroll data and March 12 pay period employment data from the Internal Revenue Service. These data serve as a proxy for millions of small firms and excuse these firms from directly reporting to the Census Bureau.

Program output	Sample size	Universe
Standard Statistical Establishment List (Annual Company Organization Survey)....................	55,000 largest multi-establishment companies (900,000 establishments) and a rotating sample of smaller multi-establishment companies (100,000 establishments)	125,000 active companies (1.2 million) establishments

Data user	Use
Economic censuses, Census of Agriculture, County Business Patterns (CBP), Annual Survey of Manufactures, and business surveys...	Provide an updated universe file for census mailing lists and sample selection, benchmarking, disclosure analysis, identification of business births and deaths, and other centralized control processes essential for supporting Census Bureau's statistical programs.

County business patterns (CBP). This program consolidates selected data from the SSEL to provide summary totals for the universe of business establishments at the 4-digit Standard Industrial Classification (SIC) level. The CBP program provides total employment; first quarter and annual payroll; total number of establishments; and number of establishments by employment size class for each county and state, District of Columbia, and Puerto Rico. These data are essential for benchmarking applications to verify independent statistical series, surveys and data bases during the intercensal years.

CBP is the only source of 4-digit Standard Industrial Classification detail at the county level for most economic activities. This detail provides an accurate accounting of the kinds of businesses located in a geographic area and enables comparisons between similar areas.

The Census Bureau tabulates these data at the state and county levels in publication, tape or diskette format.

Data user	Use
Office of Personnel Management; Departments of Defense, Energy, Agriculture, and Housing and Urban Development; Bureau of Labor Statistics; Bureau of Economic Analysis; and state and local governments.............	Determine location and concentration of establishments and employment for developing regulations and occupational safety and health standards; determine employment concentrations and trends by industry for placement of disabled employees; and provide small area statistics needed to administer Federal, state and local government programs.
Private businesses, market researchers, and industrial and civic planners...............	Analyze market potential; determine size and locations of sales territories; establish sales quotas and advertising budgets; and locate production, marketing, and service facilities.

Industry and commodity classification. This program includes review and development of industry classification, report forms and coding procedures. This process assures that Census Bureau operations are complete, consistent and comparable with OMB and other agency standards. The program is represented on the Standard Industrial Classification Technical Committee, which coordinates industry classification with OMB and other government agencies. The program provides answers to inquiries and serves as a focal point for interpreting the various systems used by the general public. It prepares coding manuals and develops procedures for coding report forms which are problems in more than one Census area or do not belong in the area for which they were mailed. In addition, it develops classifications, report forms and procedures for coding establishments which are not in the scope of the economic censuses; therefore, are not covered by any other Census Bureau program.

The Industry and Commodity Classification program reviews and coordinates efforts to develop, maintain and revise production, export and import classifications. As a corollary to such activities, the program provides research on classification and coding problems, evaluation studies and continuing efforts to improve the classification system and coding methods. The Trade Act of 1974 recognized the importance of the resulting data relationships by mandating the development of an enumeration system which provides comparability among U.S. import, production and export data. The experience and expertise developed for this program provide the basic systematic knowledge and commodity correlations needed to meet the requirements for commodity comparability.

The program is also responsible for coding those 400,000 annual applications (Form SS-4) for new employer identification numbers which were assigned unclassified or inadequate Standard Industrial Classification (SIC) codes by the Social Security Administration. All new employer identification numbers and their associated Standard Industrial Classification codes, as assigned by the SSA, are incorporated into current Census Bureau programs, including the Standard Statistical Establishment List. Correction of these unclassified or inadequately classified businesses improves the quality of Census programs and the resulting economic data.

In addition, the Industry and Commodity Classification program issues an annual report, U.S. Commodity Exports and Imports as Related to Output, which compares U.S. exports of domestic merchandise, imports for consumption, and domestic output in terms of the Standard Industrial Classification. In relating export, import and production classifications, the program provides correlations among systems and data relationships which are not available from any other source.

As a joint effort with the Bureau of Labor Statistics, the Census Bureau also publishes a quarterly report, Trade and Employment, which compares imports, exports, and domestic employment in terms of the Standard Industrial Classification. The Census Bureau provides the programs necessary to generate the publications; Bureau of Labor Statistics supplies the related employment data. The Trade and Employment Program reflects changes in the volume of imports and exports; changes in employment within domestic industries producing similar articles or directly competitive with imports; and the extent of adverse effects on domestic employment caused by changing international trade patterns.

Data user	Use
Bureau of Labor Statistics, Bureau of Mines, Department of Agriculture, Bureau of Economic Analysis, International Trade Administration...	Analyze trends in the volume of imports and exports to determine the effects on U.S. domestic industries, production and employment.
Researchers in private sector and universities.............................	Provide research material to analyze the effects of international trade on U.S. domestic industries.

Economic studies. The Economic Studies Program supports the Census Bureau's economic measurement activities through analysis and research, enhancing the quality of economic measures. The program assembles, maintains and extends the Longitudinal Research Database (LRD) and links it to other databases such as the National Science Foundation and Census Bureau's research and development surveys. It also maintains the Characteristics of Business Owners database (CBO). These, as well as other industrial data, are provided in forms conducive for analysis and research by economic policymakers and researchers throughout the government.

The Economic Studies program selects particular measurement issues based on their quantitative importance and susceptibility to resolution. Increased use of economic data in analytic and research work substantially increases the knowledge and limitations of the data, allowing the Census Bureau to improve economic measurements and analysis activities.

To accomplish the program objectives, the Census Bureau collaborates with outstanding researchers in joint initiatives using the LRD, CBO and other compilations of the Census data. Such initiatives improve the Bureau's processing procedures as well as the underlying conceptual basis of its economic data. These studies include analysis of the patterns and changes in economic structure, with particular reference to the relationship of the data reported to the information compiled in other surveys; linkage of corporate financial data with census establishment data; improvements in the techniques measuring and explaining the efficiency and competitiveness of U.S. business enterprises in the global economy; studies on the characteristics of business owners; and analysis of high-tech trade.

This program also provides for the Census Bureau's participation in the development and operation of the National Trade Bank (NTDB), which is required by the Omnibus Trade and Competitiveness Act of 1988 (Subtitle E, Part I). The NTDB is a single source of trade-related information available to the public and private sectors. Economic Affairs/Office of Business Analysis (OBA) serves as the data bank manager with advice of the Interagency Trade Data Advisory Committee (ITDAC) on the content, structure, and operation of the data bank. The Census Bureau assists Economic Affairs/OBA in the management of the NTDB, in the design and control of the electronic dissemination of the material, in the representation of the Department of Commerce on the ITDAC, in the coordination of the program, and provides data for the International Economic Data System (IEDS) component of the data bank.

The principal data distribution medium is the Compact Disk -- Read Only Memory (CD-ROM) -- which is a very efficient and inexpensive means to distribute data to the public. NTDB data is also available via magnetic tape. Direct online access to the data bank is not available to the public via Government computers; rather, distributors obtain NTDB information from the data bank in bulk form and are encouraged to make online access and value-added services available to their customers. These distributors include State development agencies, nonprofit organizations, Federal depository libraries, the National Technical Information Service, the Government Printing Office, private sector information vendors, and Department of Commerce Field Offices.

Quarterly financial report (QFR). This program collects and reports current information on corporate financial conditions. Based on an extensive sample survey, the Quarterly Financial Report is a principal economic indicator and also a component of other statistical indicators. The report presents key financial statistics including sales, profits, assets, liabilities, stockholders' equity, and related accounts and ratios. It provides industry and asset size data for small, medium, and large manufacturing corporations; and provides data for corporations with more than $50 million in assets in the wholesale, retail, and mining sectors.

Program output	Sample size	Universe
Quarterly Financial Report.............	About 10,000 corporations	About 1 million

Data user	Use
Bureau of Economic Analysis............	Construct national income accounts.
Federal Reserve Board..................	Construct flow of funds accounts.
Small Business Administration..........	Analyze small manufacturing business sector.
Other public and private sector users..	Analyze corporate profits and financial conditions by industry and asset size.

Standard industrial classification (SIC) research (4 permanent positions, 6 FTE, and $375,000). The SIC system is one of the most important tools developed to promote comparability of establishment statistics describing various facets of the U.S. economy. The 1987 SIC revision was the first major revision in 15 years, and while it brought significant improvements, continuing research is still necessary in the proper classification structure for newly emerging industries, speicifically those in the expanding sector, and in measuring the impact of the Harmonized System on the industry classification system.

In FY 1991, the Census Bureau will conduct research in the following areas:

- o How structural changes in establishment operations impact on the SIC coding;
- o Methods for identifying new technologies and new industries;
- o The impact of contract services on SIC coding;
- o Methods of increasing industry comparability with the Harmonized System.

In planning the future SIC revisions, the Census Bureau will conduct research into the methods of developing the criteria for all SIC divisions, and the specialization and coverage ratios for the nonmanufacturing sectors.

Increased funds to develop additional data sources for the National Trade Data Bank (NTDB). (0 permanent positions, 0 FTE, and $200,000). The Omnibus Trade and Competitiveness Act of 1988 (Subtitle E. Part I) calls for the Department of Commerce to establish and operate the NTDB by August 23, 1990. This budget increase covers the participation by the Bureau of the Census/Economic Affairs to develop the National Trade Data Bank (NTDB). Economic Affairs is responsible for overall management of the NTDB, for design and control of the electronic dissemination of the material in the NTDB, for representation of the Department in the meetings of the Interagency Trade Data Advisory Committee, and for general interdepartmental coordination of the program.

The initial version of the NTDB is expected to contain a "core" set of statistics and trade related information that will gradually expand over the years as additional data and resources become available. We expect information and systems development funds to be used in outyears to support the addition of Federal data and to add material from international organizations. This increase will, specifically, fund additional data source activities which will include:

-- Design and development of training materials necessary for use and operation of the NTDB CD-ROM by outside users, e.g., the Federal Depository Libraries, and private sector information vendors.

-- A complete National Trade Data Bank must include data from international organizations to enable analysts to examine the world economy, not just trade between the U.S. and its trading partners. Further development work will be needed to convert international organization (United Nations (UN), Organization for Economic Cooperation and Development (OECD), International Monetary Fund (IMF) data to the NTDB prescribed format. Also, these funds will be used to research possibilities of using information from these sources and the costs that will be incurred as royalty fees. This work is planned to occur in outyears.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Foreign trade statistics

Goals and Objectives

Goals:

The goal of Foreign Trade Statistics is to provide current U.S. statistics on imports and exports of all types of merchandise and commodities, including the mode of transportation.

Objectives:

The objectives of this subactivity are to maintain and improve the dependability, quality and timeliness of the official U.S. export and import statistics; to implement improved data collection procedures; to streamline, simplify, and reduce the reporting process to the maximum extent possible; and to conduct activities required by law (Trade Act of 1974, Trade Agreements Act of 1979, the Omnibus Trade and Competitiveness Act of 1988 and the Canadian Free Trade Agreement).

Base Program

Import statistics. This program compiles monthly foreign trade statistics from information filed with the U.S. Customs Service. Import statistics are compiled for shipments valued over $1,250 except for selected commodities valued over $250. Data for shipments valued under $1,251 (under $251 where applicable) are developed through a statistical estimating procedure. The monthly and cumulative year-to-date statistics summarize merchandise imports in terms of the commodity classifications of the Harmonized Tariff Schedules of the United States Annotated (HTSUSA), by country of origin and by customs district of entry. Additional reports interrelate data covering major commodities and groupings in terms of the Standard International Trade Classification (SITC), Standard Industrial Classification (SIC), end-use codes, and coverage by geographic and political areas. The program produces a series of monthly and annual reports, reference tabulations and publications covering government and private-sector imports of merchandise into the United States, Puerto Rico and the Virgin Islands for immediate consumption as well as into (and withdrawals from) Customs-bonded warehouses and foreign trade zones. The series show quantity (where applicable), Customs value and for selected reports, C.I.F. value (i.e. valuation which includes the cost of merchandise based on Customs value, plus insurance and freight charges). Separate aggregations show movement by method of transportation (vessel, air, other) and provide data on U.S. port of unloading, foreign port of loading, country of origin, type of vessel service and flag of vessel.

Also, this program provides statistical reports required by the Committee for Implementation of Textile Agreements for monitoring textile imports from all countries which have bilateral textile agreements with the United States.

Trade legislation requires compilation of information on imports under the Generalized System of Preferences (GSP), the Caribbean Basin Initiative (CBI) and the Canadian Free Trade Agreement as well as special provisions for handling imports from developing countries.

Program output	Sample size	Universe
Monthly and annual import trade statistics.........	All transactions over $1,250 (over $250 where applicable)	1,000,000 per month

Data user	Use
Bureau of Economic Analysis, Council of Economic Advisers, Federal Reserve Board, and Department of Treasury..	Develop the import components of the merchandise trade figures for the balance of payments and GNP accounts.
U.S. Trade Representative.........................	Negotiate and measure the effect of tariff and trade concessions under the General Agreement on Tariffs and Trade (GATT).
Department of Commerce............................	Implement and monitor international agreements such as the United States/Canadian Free Trade Agreement as well as bilateral agreements on quotas for textiles, steel, meat, footware and television sets.

Data User (cont'd)	Use
U.S. International Trade Commission..................	Measure the effect of U.S. tariffs on import levels. Measure effects of import trade on the U.S. market and domestic industry.
Private sector....................................	Analyze product and market development, share-of-the market, and market penetration.
Government and non-government transport industry...	Vessel and air data to measure market share, competitive status, plan promotional activities, and need for additional new types of facilities.

Export statistics. This program compiles mo thly export statistics from export documents collected by
the U.S. Customs Service and from informatio provided directly to the Census Bureau by exporters and
freight forwarders. This information covers all shipments individually valued over $2,500 for all
countries; however, the Census Bureau estima es data for shipments valued under $2,501 for individual
countries. The monthly and cumulative year-o-date statistics summarize merchandise exports in terms
of the commodity classifications of Schedule B, by country of destination and by U.S Customs district
of exportation. Other reports show and inte relate data covering major commodities and groupings in
terms of the Standard International Trade Cl ssification (SITC), Standard Industrial Classification
(SIC) and end-use codes, and coverage by geo raphic and political areas. Data items include movement
of exports by vessel and air with informatio on value, quantity and shipping weight, U.S. port of
loading, foreign port of unloading, commodit , country of destination, type of vessel service, and flag
o' vessel.

The export statistics include nongovernmenta shipments to foreign countries, including shipments from
Foreign Trade Zones, a well as government sh pments (i.e., Department of Defense Military Assistance
Program, Grant-Aid shipments, economic assis ance shipments, and shipments of agricultural commodities
under P.L. 83-480).

Program output	Sample size	Universe
Monthly and annual export trade statistics	All transactions over $2,500	1,000,000 per month

Data user	Use
Bureau of Economic Analysis, Council of Economic Advisers, Federal Reserve Board, and Department of Treasury....................................	Develop the export component of merchandise trade figures for the balance of payments and GNP accounts.
Department of Agriculture.......................	Monitor, evaluate and plan agricultural development programs and quotas.
Department of Commerce..........................	Implement and monitor international agreements such as the United States/Canadian Free Trade Agreement; promote export growth through the export promotion program.
U.S. Trade Representative.......................	Conduct trade negotiations under the GATT.
Bureau of Labor Statistics......................	Sampling for export price indexes.
Congress..	Monitor agency programs relevant to export expansion, quotas and controls.
Government and non-government transport industry....................................	Vessel and air data to measure market share, competitive status, plan promotional activities, need for new facilities, etc.
Private sector..................................	Employ the data in share-of-the-market analyses and market penetration studies; determine marketing policies and strategies.

Trade Monitoring. This program covers the Census Bureau responsibilities under the Trade Act of 1974, particularly Section 608 (Uniform Statistical Data on Imports, Exports and Production), Title V (Generalized System of Preferences) and Section 282 (Trade Monitoring System). Section 608 provides data on imports, exports and domestic production on a comparable basis. The commodity classification systems are revised on a regular basis, modified to reflect changing statistical needs and to improve comparability of trade and domestic production data as well as the comparison of trade data between the United States and other countries.

Title V of the Trade Act of 1974 requires data to monitor imports from designated countries and to evaluate the economic effects of the Generalized System of Preferences (GSP). The latter provides duty-free access to the U.S. market by developing countries. The compilation of GSP import data provides the means for analyzing the effectiveness of the Trade Act to promote exports and economic development in beneficiary countries. The data also provide the basis for changes in eligibility whenever GSP imports from a beneficiary country trigger the need for competitive limitations.

Section 282 of the Trade Act of 1974 requires data to monitor the relationship between imports and U.S. employment, and production by geographic region, assisting in the identification of areas affected by imported articles.

Section 608 of the Trade Act of 1974 requires the publication of Current Industrial Reports to enhance the comparability of imports, exports, and domestic production statistics. This requires continuous revisions of the import, export and output classification systems to promote comparability with the new international Harmonized System. Import and export computer programs are revamped to accommodate the creation of over 20 million computer records annually. In addition, processing procedures and programs are revised to handle the anticipated increase in defective documents. Meetings and seminars with exporters, importers, producers, Customs import specialists, and Census Bureau staff are required to coordinate processes to reduce the expected reporting problems and defective documents.

Improve foreign trade statistics (13 permanent positions, 10 FTE and $500,000). Because there is a suspicion of a significant undercount of exports, this enhancement provides for a comprehensive program to assess and improve the quality of foreign trade data including the verification of reported data, audits of Customs port operations to measure suspected export undercount, an education program directed to exporters, importers and brokers, and a continuing review of the editing and imputation methods used in compiling the statistics.

This program includes conducting mail and telephone surveys of exporters to verify and correct statistical data; verifying import data using commercial documents required at the time of importation; conducting continual on-site audits of operations and documentation at ports of exit to measure export undercount, devise corrective actions, improve communication and coordination between participating agencies and the trade community and correct the statistical data where necessary; increasing the current educational effort directed at errant respondents, i.e., exporters, importers, or brokers; and studying the process of compiling the data in the areas of editing and imputation to develop means of measuring error which results from processing techniques.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Government statistics

Goals and Objectives

Goals:

The goals of Government Statistics are to provide current statistical information on state and local governments in the areas of public finance and employment; to collect tax and intergovernmental revenue data on state and local governments; to provide fiscal data elements used in aid distribution formulas; and to provide Federal expenditure data on a geographic basis.

Objectives:

The objectives of Government Statistics are to maintain and improve the accuracy of data produced and to ensure that the areas of governmental finance and employment are identified and met.

Base Program

Government finance survey. This survey provides annual estimates on government financial activity; quarterly statistics on Federal, state, and local government tax revenues; and quarterly statistics on the finances of selected public employee retirement systems. Annual financial statistics serve as updates of census year benchmark statistics and include data on revenue by sources, expenditures by function and object, indebtedness and debt transactions and financial assets.

These state and local government financial statistics provide the basis for many benchmarks and analyses. The Bureau of Economic Analysis estimates the state and local sector of the annual GNP accounts--about 13 percent of the total--from this information. The tax and intergovernmental revenue data base provides information to prepare analyses of fiscal policy, tax burdens and comparative studies on governmental finance. The detail by types of local government provides information on the relative activity of counties, municipalities, townships, special districts and school districts.

The Census Bureau publishes financial data on a fiscal year basis in the form of nationwide totals by level and type of government (including the Federal Government), and related state-by-state area aggregations subdivided into state government and type of local government (counties, municipalities, townships, special districts and school districts). The publications provide individual government statistics for states, county governments of 100,000 population or more, municipalities of 75,000 population or more, and school systems with enrollments of 15,000 or more.

Program output	Sample size	Universe
Annual government finance publications on Federal, state, and local governments	50 state governments and 22,000 local governments	83,200 government units

Data user	Use
Public officials; public interest groups; academic, financial, and business communities......	Economic research and appraisals of government finance activities.
Advisory Commission on Intergovernmental Relations..	Develop recommendations regarding the financing of state and local governments and their relationship with the Federal Government.
Bureau of Economic Analysis..........................	Update the annual government sector estimates of the GNP.
Federal Reserve Board................................	Develop data for the flow of funds reports and analysis of economic conditions.
Market analysts......................................	General measure of asset holdings and credit ratings for state and local governments.

Survey of government employment. This program provides the annual update of government employment and payroll data by type of government and function. These data provide the basic measures of public sector employment and payrolls for intercensal years. Basic data elements include full-time and part-time employees, full-time equivalent employment, October payrolls and full-time employee average earnings for the month of October. The Census Bureau provides state-by-state estimates for each type of government (Federal, state, county, municipal, township, school district and special district) and each level of employees, full-time equivalent employment, October payrolls and full-time employee average earnings for government (Federal, state and local) by governmental functions (e.g., education, police protection and fire protection). The survey is the only intercensal source of public employment and payroll data at this level of detail.

Program output	Sample size	Universe
Annual employment publications (3 reports)........	50 state governments and 22,000 local governments	83,200 governments

Data user	Use
Bureau of Labor Statistics.........................	Annual benchmark adjustments in its monthly statistical series on employment and earnings.
Department of Housing and Urban Development.......	Develop a public wage inflation factor for the allocation of their operational subsidy grants to local housing authorities.
Government legislators and administrators.........	Comparative data on a state area, substate area and/or individual government basis for decision-making and administrative purposes.
Bureau of Economic Analysis........................	Develop GNP statistics, GNP deflator indexes, national income and product accounts, and regional economic analyses.
Department of Agriculture..........................	Allocate administrative funds to states participating in the Special Supplemental Food Program for Women, Infants and Children.
Tax foundations and citizen interest groups.......	Monitor and analyze the efficiency of the public sector.

Tax and intergovernmental revenue. The Census Bureau collects tax data by the major categories of property, sales, income licenses and permits; and identifies intergovernmental receipts according to source of funds--Federal, State or local governments--and by the major purpose served. The specific purpose categories include education, public welfare, health and hospitals, streets and highways, housing and urban renewal, property tax relief programs and general support.

The Census Bureau obtains the data primarily through cooperative collection arrangements with State agencies which oversee, monitor or report on the financial operations of local governments in their states. Agreements exist between 36 states and the Census Bureau whereby the states conduct the initial survey and transmit the results to the Census Bureau. The States depend upon the Bureau's technical and professional support for assistance in these surveys. In the remaining States, or in cases where there are statistical gaps, the Census Bureau conducts a direct mail canvass.

Program output	Sample size	Universe
Annual government finance publications...........	All general purpose governments	39,000 counties, cities and towns, Federal and state governments.

Data user	Use
Federal and state agencies......................	Administer grant programs. Determine comparative tax effort burden of governments.

Formula grant data. Major products include the identification and classification of governmental entities, measurement of local government revenues, preparation of detailed computer data tapes, and verification of data elements used for fund distribution.

Program output	Universe
Classification of all governments by types. Identification of revenues by types and data element tapes for public use................	All 83,200 government units.

Data user	Use
Federal agencies, Congress, and state governments.	Administer aid distribution formulas and measure governmental fiscal capacity.

Federal reporting systems. The Federal Assistance Award Data System (FAADS) serves as the central source of information in the United States on all Federal domestic financial assistance programs. Information on each award includes the assistance program and amount funded, the Federal agency responsible for the program, type and name of recipient, and geographic location of the recipient (including the congressional district). The Census Bureau collects quarterly data in a standard, machine-readable format directly from Federal agencies administering the assistance programs. The FAADS program is required by Title 31, Section 6102(a) of the U.S. Code.

The Consolidated Federal Funds Report (CFFR) provides statistics on Federal Government expenditures or obligations in each state and territory, county and municipality. Coverage of the CFFR includes Federal salaries and wages, procurement, grants and direct payments for individuals, as well as Federal insurance and loan programs. The Census Bureau issues a series of three annual publications, each covering different levels of geographic detail (state, county and subcounty). The CFFR is required by Title 31, chapter 62 of the U.S. Code. The CFFR is the only central source of information on the geographic distribution of virtually all Federal spending.

Program output	Universe
Federal Assistance Award Data System (FAADS)..........	All Federal financial assistance awards listed in the Catalog of Federal Domestic Assistance (about 750 programs.) Includes grants, loans, insurance and direct payments.
Consolidated Federal Funds Report (CFFR)..............	85 percent of Federal budget outlays. Excluded outlays are principally interest on Federal debt and international transactions, i.e.,

Data user	Use
Congress...	Provide data on Federal Government role by state/district, program or spending category.
States...	Notification of Federal grant awards in conjunction with Executive Order 12372.
Office of Management and Budget (OMB).................	Meet requirements of 31 U.S. Code 6102(a), which requires OMB to maintain a grant award information system. outlays not allocated among the states.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current economic statistics programs
Subactivity: Agriculture statistics

Goals and Objectives

Goals:

The goals of Agricutlure Statistics are to provide current statistics on cotton production and ginning by state and county, and to meet current informaiton requirements for general census data on agriculture.

Objectives:

The objectives of Agriculture Statistics are to maintain and improve the quality of the data published and to ensure that the data are responsive to the needs of users.

Base Program

The Agriculture Statistics program provides the key measures of the cotton ginning industry on an annual basis as required by 13 U.S.C. 41-45. This title governs all data collected and published, including dates. The Census Bureau collects and publishes information on cotton ginning and production from all cotton gins in the United States during the ginning season.

Program output	Sample size	Universe
State bi-weekly cotton ginning report	N/A	1,645 gins
County/state monthly cotton ginning report	N/A	1,645 gins
Annual cotton ginnings in the U.S. report	N/A	1,645 gins

Data users	Use
Department of Agriculture:	
- National Agriculture Statistics Service	Estimate cotton production
- Agricultural Marketing Service	Determine cotton by grade
- Economic Research Service	Update cost of production data
National Cotton Council	Indicate and project cotton supply, demand and prices

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current demographic statistics programs
Subactivity: Demographic surveys

Goals and Objectives

Goals:

The goals of Demographic Surveys are to provide current information on the number, geographic distribution, social and economic characteristics of the population; and to test and implement new approaches and concepts for demographic surveys.

Objectives:

The objectives of this subactivity are to maintain and improve the quality and reliability of socioeconomic data; to maintain current activities which meet the needs of existing Federal programs, particularly state-level data; and to ensure the contained orientation of the demographic surveys toward national goals.

Base Program

Current population survey. The Census Bureau shares funding of the Current Population Survey program with the Bureau of Labor Statistics. The survey provides the official government estimates of employment, unemployment and related data on the characteristics of the labor force and persons not currently in the labor force. The Census Bureau funding supports the monthly collection of demographic data and the supplemental inquiries on income and education as well as the managerial responsibilities for the technical operations of the survey, including quality control maintenance.

In addition to the estimates related to the labor force, the Current Population Survey (CPS)--along with the Survey of Income and Program Participation (SIPP)--provides a major intercensal source of information on general socioeconomic characteristics of the U.S. population. For example, in March of each year, the

CPS serves as the vehicle for a major supplemental inquiry which produces the official estimates of personal and family income, number and type of families, and the number of families and persons living in poverty. This supplement also produces data showing migration trends between regions of the country, and metropolitan/non-metropolitan residences. The CPS also collects information on school enrollment, educational attainment, future birth expectations, and changes in the number of families and their composition. The Census Bureau obtains these data by adding supplemental questions to the survey at various times throughout the year and tabulates them by age, race, sex, Spanish origin, veteran status, and other demographic variables. Also, through supplemental inquiries, the CPS serves as the vehicle for collecting a wide range of data requested and paid by other Federal agencies.

The basic demographic data collected in the CPS are used in three principal ways: (1) internal analytical research; (2) evaluation of other survey results; and (3) use in association with data such as the monthly labor force or supplement publications. The data set which results from combining the monthly labor force data with the demographic data provides the ability to understand labor force patterns of many subpopulation groups.

The Census Bureau obtains monthly estimates which meet the Bureau of Labor Statistics standards of reliability for the country as a whole and the 11 largest states. The Census Bureau also produces annual estimates meeting specified reliability requirements for the 39 remaining states, District of Columbia, 30 large metropolitan statistical areas and 11 of their central cities. These data are among the most important U.S. indicators measuring the status and progression of the national economy on a current basis. Consequently, these indicators are key inputs to the decision-making process for national economic policy and the evaluations, forming the basis for the discontinuance, modification or creation of national economic programs. Sub-national data from the CPS are the basis for the distribution of Federal funding allocated each year to areas based on unemployment levels and rates.

During FY 1988, the Census Bureau completed the changeover of the CPS labor force computer processing system to a standard programming language. In FY 1989 we began using it to produce the monthly employment and unemployment estimates.

Program outputs	Sample size	Universe
Monthly and annual average tabulations of employment and unemployment data crossed by demographic characteristics.....	54,000 interviewed households per month	Approximately 87 million households
Annual report on income, poverty, fertility, migration, family status, school enrollment, educational attainments and other topics		

Data Users	Use
Bureau of Labor Statistics..............	Analyses and releases of official employment and unemployment in its monthly publication, "Employment and Earnings."
Council of Economic Advisers, Federal Reserve Board, Congress, Federal agencies, universities, and private organizations...	Analyze the status of U.S. economy and formulate/evaluate economic policy.

Methods development survey. This program provides a means to test and develop alternative survey methodologies and concepts needed to improve the quality and reliability of demographic surveys. Improvements derived from this program are applicable to the Current Population Survey (CPS), Survey of Income and Program Participation (SIPP) and other demographic surveys of national importance, including those providing statistical measures of crime, housing, health, consumer income and expenditures. Any enhancements to the Methods Development Survey will affect Federal programs which provide the statistics for funding allocations to state and local areas.

This program investigates all facets of survey operations, i.e., interviewing methods, response bias, quality control procedures and questionnaire design. The kinds of methodologies tested in the first phase of this program included telephone versus personal interviews, response differences between household members and interviewer conditioning. Having completed the testing of these different data collection procedures, the Census Bureau issued reports on the effect of these procedures. The earlier phases of the testing focused on the content recommendations made by the National Commission of Employment and Unemployment Statistics (NCEUS) for the CPS. Several of these recommendations have been incorporated into the CPS.

During FY 1988 and 1989, the Census Bureau completed the evaluation of Computer Assisted Telephone Interviewing (CATI) in the Current Population Survey and began introducing this data collection methodology into production use for this survey. We also began an evaluation program for Computer Assisted Personal Interviewing (CAPI), which will complement CATI in forming a completely automated data collection system. The combined use of CATI and CAPI will reduce or eliminate the costs for clerical editing, office handling, printing, and shipping of questionnaires, and will permit greater control over the interview situation. This will reduce interviewer errors and improve the quality of the data.

The Census Bureau will continue the field testing of CAPI in FY 1990. We will determine how interviewers and respondents react to the use of portable computers in the interview situation and what, if any, technical problems are associated with using computers in the field. Also, we will begin to develop an integrated communications/management system to control the flow of data and administrative information between headquarters, regional offices, and interviewers. The development of this system is critical for accurate handling of the numerous and complex surveys that the Census Bureau conducts. The development will continue into FY 1991. In mid FY 1991, we will introduce an elementary version of this communications system for use in testing a revised CPS questionnaire, and we will enhance this system as the year progresses.

Program outputs	Sample size	Universe
Census Bureau internal evaluation files and reports....................	Variable; average 1,000 households per month	Approximately 87 million households

Data users	Use
Census Bureau.........................	Development and evaluation of more accurate and efficient survey methodologies.

Survey of income and program participation. This survey satisfies the need for improved data on the economic situation of persons and families in the United States. Information covers sources of money and nonmoney income, taxes, and assets and liabilities to produce improved estimates of income distribution, poverty and wealth. The survey provides data to study the efficiency of Federal and state transfer and service programs; to estimate future program costs and coverage; and to assess the effects of welfare, tax, Social Security reform proposals and other proposed policy changes.

The survey was originally designed to introduce annual overlapping panels of 20,000 households with each household being interviewed every 4 months over 32-month period. A variety of budget reductions since FY 1985 have necessitated the introduction of smaller panels (11,500 households since 1985) that have a shorter duration (seven total interviews instead of eight beginning with the 1986 Panel). Because the data from these smaller panels caused analytical difficulties for data users, the Census Bureau began budget initiative actions starting in FY 1987 to increase the SIPP budget to allow a return to the original sample size and length. These actions have been unsuccessful. Consequently, the Census Bureau has taken an interim step to increase the size and usefulness of the 1990 Panel, introduced in FY 1990, by choosing one of the objectives of SIPP to fulfill now, while reducing the survey's ability to accomplish others

28-916 O—90—21

(until additional funding is obtained). This plan included fielding an 18,000 household 1990 Panel and supplementing it with a special group of approximately 3,000 households from the 1989 Panel (a combined panel size of 21,000 households). To fund this restructuring, we discontinued data collection for the 1988 Panel after six interviews and the 1989 Panel households not retained for combination with the larger 1990 Panel, after three interviews (in January 1990).

Each household in this single, larger 1990 Panel is interviewed three times a year and is asked to recall a 4-month period. Interviews gather core data for all household members 15 years old and over. Information is collected on sources of money and nonmoney income, eligibility for and participation in various government transfer programs, labor force status, household composition, assets and liabilities, disability, work-related expenses, marital history, work history, childcare arrangements and expenses, pension coverage, and taxes. The survey permits the study of intrayear changes in income and poverty status and their relationships to participation in government programs, changes in household composition and other factors. The survey has flexibility to cover additional topics of interest to government policymakers.

Activities for FY 1991 will include conducting interviews for three waves of the 1990 Panel; keying data from the interviews; computer editing and reformatting data from the 1990 and earlier panels for analytical purposes; continuing project management and planning; data analysis; preparation of data products, including published reports and public use microdata files; research on data quality improvements and coordination with Federal agencies to ensure that the survey content is properly focused.

Program outputs	Sample size	Universe
Publications (i.e., sets of periodic or single-term reports).................	11,500 interviewed households from the earlier panels; 21,000 interviewed households from the 1990 Panel	Approximately 87 million households
Microdata public use files (Cross-sectional analysis files for each interview wave of each panel)...........................	11,500 interviewed households from the earlier panels; 21,000 interviewed households from the 1990 panel	

Data Users	**Use**
Congressional Budget Office and Congressional Research Service...........	To study the low income population, elderly population and health insurance coverage.
Department of Agriculture.................	To analyze the Food Stamp and School Lunch programs, including the effects of assets on food stamp eligibility
Department of Labor.......................	To study market-related hardship measures and changes in the labor force and dependency status through time
Social Security Administration............	To study social security beneficiaries by reason for benefits, levels of income, and demographic/economic characteristics such as assets holdings and pension coverage
National Center for Health Services Research........................	To examine the characteristics of the Medicare elderly who also have private health insurance
Small Business Administration.............	To study labor mobility by size of firm
Office of Child Support Enforcement.......	To determine the amounts of savings which can be realized if child support were included in the income test for AFDC, food stamps and Medicaid
Academic researchers.......................	To examine changes in family and household structure which occur over short periods of time and last for short durations. To research changes in school enrollment, geographic mobility, labor force participation, and marital status

	FTE	199		209		10	

Modernization of current population survey (CPS) processing system (19 permanent positions, 14 FTE, and $926,000). The complete redesign and reprogramming of the CPS processing system is one of the highest priorities identified by the joint Census Bureau and Bureau of Labor Statistics conference on the Future of the CPS. Although the CPS employment and unemployment data are widely used in government and the private sector to analyze the U.S. economy, the processing system which produces these data is outmoded. Designed in the 1960's using then-current technology and techniques, the system does not produce the types of output, such as linked files and databases, which are conducive to the computerized analytical techniques currently being used. Specific shortcomings of the present system include (1) the difficulty of integrating the system with the Computer-Assisted Telephone Interviewing (CATI) techniques which the Census Bureau is introducing to improve data collection; (2) the reliance on clerical coding of occupation and industry data; and (3) the independent nature of processing data from each monthly survey despite the overlap in the monthly samples. The last factor confounds analysis of labor force dynamics through the use of flow data from the survey. The present system is also difficult to modify to accommodate changing data needs. It produces final data in formats which are unwieldy for analysts and unreliable for long-term storage.

The modernization of the CPS processing system will result in a process which is fully integrated from data collection through final data formats. After linking CATI and Computer-Assisted Personal Interviewing (CAPI) into an integrated system, the next step in this modernization will be the adaptation of the automated coding developed for the 1990 Decennial Census to reduce reliance on time-consuming, expensive and error prone clerical operations. While continuing to rely on mainframe computers for portions of the processing, the Census Bureau will integrate more efficient mini- and microcomputers into the new system wherever possible

Database technology will be used to permit positive control and monitoring of the processing flow, and will be a major factor in providing final data in formats which will facilitate the Bureau of Labor Statistics and private sector usage of the data. In addition, the Bureau will explore the use of advanced data storage media for the CPS, such as the Compact Disk - Read Only Memory, to improve the accessibility and reliability of data stored for long-term and historical uses; and investigate the feasibility of storing final data on centralized, off-line, minicomputers to provide direct access by users without the need to create redundant copies of large files.

The complete redesign of the Current Population Survey processing system will lead to greater efficiency and control in the production of monthly employment estimates, and provide key supplemental data on income and poverty. It will improve the reliability of data through the use of previously gathered information in edits and imputation, and should reduce the time required to produce the data. Finally, the new processing system will produce data products which are compatible with current technology and are in formats responsive to analyses.

Phase-out of Computer-Assisted Telephone Interviewing (CATI) (-4 permanent positions, -4 FTE, and -$100,000). This program decrease reflects the first phase-out of the Census Bureau's planned three-year funding associated with the introduction of CATI in the Current Population Survey.

INCREASE FOR FY 1991
(Direct obligations in thousands)

Activity: Current demographic statistics
Subactivity: Demographic surveys

		1991 Base		1991 Estimate		Increase/(Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
Survey of income and program participation (SIPP)	Pos./BA	349	$21,638	383	$23,638	34	$2,000
	FTE	450		507		57	

Restoration of Survey of Income and Program Participation (SIPP) sample (34 permanent positions, 37 FTE and $2,000,000). The Survey of Income and Program Participation (SIPP) provides comprehensive information on the economic resources of the U.S. population and on how public transfers and tax programs affect their financial circumstances. The Survey's original sample design called for introducing a new sample panel of 20,000 households annually to produce survey estimates with only small biases. The sample restoration funded by this initiative will begin by introducing a new panel of 14,000 households in February 1991. This restoration process will build on the survey restructuring that was introduced in FY 1990. This restructuring involved the design and implementation of a single, larger 1990 Panel (21,000 interviewed households).

Congressional budget reductions and requirements for more staff than originally estimated to meet the processing and operational demands have resulted in significant sample reduction for SIPP in the 1984-1989 Panels. The sample size per panel since 1986 is 11,500 interviewed households; the optimal sample size is 20,000 households per panel. In addition, the Census Bureau has shortened the duration of the 1986-1987 Panels from of the 1986-1987 Panels from eight to seven interviews, the 1988 Panel to six interviews, and the 1989 Panel to three interviews.

Restoration of the full sample for SIPP estimates will produce longitudinal data, such as intrayear transitions into and out of poverty and the characteristics of persons and families who become eligible for government assistance programs or those who no longer are eligible due to changing economic circumstances. The reliability for these longitudinal estimates will improve by 20 percent as the result of the full sample restoration.

In addition, the sample restoration will also have a positive effect on cross-sectional variables. The Census Bureau will be able to detect changes that are 25 percent smaller in the survey's cross-sectional estimates with a full sample.

To meet the objectives of the SIPP, the survey must return to a design of larger overlapping panels. To begin this process, we will require additional and increasing funding over a 4-year period starting in FY 1991. Approximately $2 million will be needed in FY 1991 to introduce a new panel, starting in February 1991, of 14,000 households. In FY 1992, we will continue to interview the 1990 Panel and 1991 Panel households, and introduce a new panel of 20,000 households at an additional cost of $6.7 million. In FY 1993, we will complete interviewing for the 1991 Panel, continue to interview the 1992 Panel, and introduce the second panel of 20,000 households (1993 Panel) at the same level of funding, $6.7 million, as needed in FY 1992. Although we will be interviewing fewer households in FY 1993, we plan to use the additional funds for oversampling research in anticipation of the implementation of the 1990 Census sample redesign in 1995. In FY 1994, we will introduce the third panel of 20,000 households and interview a full complement of three overlapping survey panels, thus getting us back to the original design. The cost of this activity in FY 1994 and following years is an additional $1.7 million. This brings the full level of SIPP funding to $29.9 million. Any delay in this funding sequence will cause a commensurate delay in the survey's ability to achieve its intended objective.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current demographic statistics programs
Subactivity: Demographic reports

Goals and Objectives

Goals:

The goals of Demographic Reports are to provide current information on the geographic distribution, and the demographic, social and economic characteristics of the U.S. population; to provide current estimates and projections of the U.S. population; and to develop and publish special analyses on demographic, social and economic trends in the United States.

Objectives:

The objectives of Demographic Reports are to publish recurring reports on the current estimates, demographic and socio-economic characteristics, and special projections of the population; to maintain programs which adequately meet Federal needs; to publish reports which will assist decision-makers in developing national policy; and to maintain or improve the quality, reliability and relevance of the data produced.

Base Program

Population characteristics. Reports based on information from the Current Population Survey (CPS), the Survey of Income and Program Participation (SIPP), and other surveys provide the data essential for planning and evaluating public and private programs. These reports include special analyses and current statistics on a wide range of topical concerns. The Census Bureau presents data on race, age, sex, Hispanic origin, household, family and personal income (both money and non-money), employment and unemployment, occupation and industry, marital status, fertility, childcare arrangements, family and household living arrangements, educational attainment, characteristics of students and dropouts, voting, migration and residence (farm and nonfarm, metropolitan and nonmetropolitan, urban and rural).

The reports for these subject matter areas provide cross-classifications of characteristics for analytical purposes, and special analytical studies to profile the changes in American family and economic life.

In addition to the recurring reports, the Census Bureau recently published special studies on American families, non-cash benefits, child support and alimony, trends in childspacing, selected characteristics of travel to work in metropolitan areas, characteristics of the older population, geographic mobility of Americans, value of education, computer use, money income and poverty status of families and persons, household money income, household income after taxes, support for nonhousehold members, childcare, disability and health insurance coverage, and immigration to the United States.

The Census Bureau will continue work on statistical tables and analytical texts for publication in the Current Population Reports (CPS). These reports describe relevant demographic, economic and social characteristics of the U.S. population; and are usually published annually. The Census Bureau will also continue to collect and publish nationwide data projecting the number of persons of voting age, voter registration and participation for congressional elections and presidential election years.

Data users	Use
Departments of Justice, Housing and Urban Development, Health and Human Services, Education, Transportation, Veterans Administration, U.S. Civil Rights Commission Federal Elections Commission,.libraries, state and local governments, business and academic researchers, and the general public.	Determine the basic conditions of U.S human resources; measure changes in the economic, demographic, and social situation; and understand the current national situation in relation to income, education, employment, language proficiency, childcare, racial and ethnic groups, the aged and other areas.

Population estimates and projections. Reports provide regular estimates of the U.S. population by age, sex, race and Hispanic origin; population of states by age and sex, metropolitan areas, counties and subcounty areas; number of households by state and county; experimental estimates of the population of counties by age, race and sex; and estimates of population for Puerto Rico and the outlying areas.

The Census Bureau prepares projections on population and households for future years for the United States and the states by age, race and sex. The following data sources are used to prepare these estimates and projections: census population details, births, deaths, immigration, school enrollment, housing statistics, social security data, medicare data, Internal Revenue Service data, immigration-emigration data, and special supplements to the CPS.

In addition, the Census Bureau provides assistance in the interpretation and use of these data. We are working with state agencies under the Federal-State Cooperative Programs for population estimates and for population projections to prepare (a) the county estimates by using standard procedures which ensure consistency with the state and national estimates, and (b) appropriate projection techniques.

Data Users	Use
Federal, state and local governments, media business and academic researchers, and the general public.	Determine the distribution of Federal program funds to local areas on the basis of population and planning purposes; identify changes in population size and distribution.

Demographic analysis. This program develops special microdata computer files for authoritative analyses of demographic, social and economic conditions and trends to foster effective use of recurring national surveys (the Survey of Income and Program Participation, the Current Population Survey, the American Housing Survey, and National Crime Survey) and the Censuses of Population and Housing. To the extent possible and warranted, we make the resulting microdata files and computer programs available for incorporation in the continuing programs of Federal statistical and program agencies.

During FY 1991, we will prepare and distribute analyses of demographic trends occurring in metropolitan and nonmetropolitan counties of varying economic specialization; prepare and release analyses of changing socio-economic characteristics of families and children using the Survey of Income and Program Participation, the Decennial Census, and the Current Population Survey; issue a number of "Statistical Briefs" on demographic and housing trends; and initiate development of comparable areal files from recent censuses for comparison with 1990 census data.

Data users	Use
Cabinet-level departments, Congressional committees, State and local officials, businesses, educators, media, researchers, librarians and general public..	Identify program-relevant changes in city population, households, families, and labor force as well as special interest sub-populations such as veterans.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current demographic statistics programs
Subactivity: International statistics

Goals and Objectives

Goals:

The goal of International Statistics is to provide reliable estimates on the population, labor force and economic activity; their spatial distribution, analyses on aspects of demographic and economic policies and trends for various countries; and foreign technical assistance.

Objectives:

The objectives of International Statistics are to maintain up-to-date estimates and projections, to prepare monographs presenting results of research, to meet requests for information and assistance relating to these subject areas, and to provide technical assistance to overseas statistical programs. This program also provides library facilities, maintains the Census Bureau's publication exchange with foreign statistical offices, and conducts study tours for senior foreign dignitaries who produce and use these data.

Base Program

Foreign research and analysis. The outputs of International Statistics include economic information, and demographic estimates and projections of the population by age, sex, components of change, vital rates, gross reproduction rates, and expectation of life at birth for Communist countries. Data on selected countries cover characteristics of the population, population distribution, population policies and programs, economic statistics, input-output models, workforce characteristics, employment remuneration, and statistical systems. This subactivity contributes a working data source of statistical information to assess the capabilities and probable actions of foreign countries.

Given its source materials and expertise, the International Statistics subactivity also meets special requests for information and advice relating to problems, potentialities and prospects in population, labor force, economic development and policies of the Soviet Union, China and Eastern European countries.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Current demographic statistics programs
Subactivity: Housing statistics

Goals and Objectives

Goals:

The goal of Housing Statistics is to provide a measure on the types and levels of residential housing vacancies in the United States, both "inside and outside" metropolitan statistical areas by central cities and suburbs, and the four major geographic regions.

Objectives:

The objectives of Housing Statistics are to produce the quarterly rental and homeowner vacancy rate used to formulate the national quarterly economic indicators; to provide a quarterly measure of the types of housing in surplus and shortage, and the characteristics of available housing; to measure the level of homeownership; and to ensure that the collection and publication of data continue to be focused on the demand for housing and types of available housing.

Base Program

This program conducts the Housing Vacancy Survey which produces basic information on the current housing market. The vacancy rates for rental and homeowner units are produced on a quarterly and annual basis for the country as a whole, four major geographic regions, and "inside-outside" metropolitan areas by central cities and suburbs. The rental vacancy rate from the survey is a component of the index of leading economic indicators published by the Department of Commerce. Homeownership rates are produced quarterly and annually for the United States. The annual report also contains vacancy rates for selected metropolitan statistical areas. The quarterly reports include counts of the total housing inventory as well as data on selected characteristics of the vacant units, i.e., number of rooms, plumbing facilities, year built, duration of vacancy, monthly rent asked and sale price. Quarterly vacancy rates cover units with selected housing characteristics (number of rooms, plumbing facilities, year built, value and rent) for the rental and homeowner inventories. Data from the survey are vital to public and private organizations in evaluating housing markets and in determining the number and characteristics of units available for occupancy. The Census Bureau compiles the vacancy information from the supplemental Current Population Survey questionnaires.

Program Output	Sample Size	Universe
Four quarterly press releases, four quarterly reports, and one annual report.........................	70,000 housing unit sample of which approximately 11 percent are vacant.	All residential housing units within the 50 states and District of Columbia.

Data User	Use
Federal Reserve Board, Department of Housing and Urban Development, Bureau of Economic Analysis, and state and local government agencies..................	Measure types of housing available and levels of demand for housing in United States.
Home builders, mortgage companies and real estate agencies.......................	To determine the types of housing construction needed and the types in which surpluses exist.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Other programs and publications
Subactivity: Statistical abstracts and supplements

Goals and Objectives

Goals:

The goals of Statistical Abstracts and Supplements are to provide basic statistical reference volumes and guides to sources of statistics; to provide reports emphasizing ready accessibility to large amounts of statistical information and its sources with comprehensive subject matter coverage, compact formats and convenience in use; to provide reports meeting information needs at the national, state and regional levels; and to provide reports which facilitate and encourage the widespread use of the best data for decision-making at all levels.

Objectives:

The objectives of Statistical Abstracts and Supplements are to prepare and release the annual Statistical Abstract of the United States, annual Bureau of the Census Catalog and Guide, and Monthly Product Announcement; to plan and develop other statistical reference sources such as the State and Metropolitan Area Data Book, County and City Data Book, and Historical Statistics of the United States; and to prepare and release guides and directories to assist data users in accessing Census Bureau statistics.

Base Program

The Census Bureau has issued the Statistical Abstract of the United States annually since 1878, except in 1926 and 1944. The abstract provides a comprehensive summary of industrial, social, economic and political data. It serves as a statistical compendium and as a guide to other statistical publications and sources. It includes over 1,500 tables and charts drawn from data of over 200 government, private and international agencies. The Statistical Abstract is the principal source for annual statistics describing the social and economic structure of the United States. Highlights of statistics from the Abstract are available to data users through computer-based on-line retrieval services. An extension of the Abstract program includes planning and development of selected periodic supplements, including the County and City Data Book, and State and Metropolitan Area Data Book, and Historical Statistics of the United States. A recent survey defined the following users of the Statistical Abstract: congressional offices, administrators and planners at all levels of government; businesses; market analysts; researchers and educators; students; writers and librarians.

The Bureau of the Census Catalog and Guide is a complete guide to all Bureau programs, publications, special tabulations and computer-based files. It provides detail on content, periodicity and price for each report and file. This publication is the Census Bureau's official record of reports and activities. The Catalog/Guide keeps the public informed about the vast flow of census reports and the availability of data by way of the Bureau's computer files in a controlled and dependable manner. Portions of the Catalog/Guide are maintained on computer-based, on-line retrieval systems for access by users. The Census Bureau supplements the annual Catalog/Guide by the Monthly Product Announcement which lists all publications, computer tapes, microfiche and other products released during the previous month. In addition, the Census Bureau prepares and issues the Daily List [for Department of Commerce daily usage] which provides a daily inventory of every report, press release, data file, microfiche and map which it issues, and listing all reports transmitted to the printer with estimated release dates.

Data user	Use
Congressional staffs/research areas.................	Policy background and research information.
State/local government planners and officials.......	Research, economic development indicators, and input for state statistical publications.
Librarians..	Reference and research on national policy developments, conditions, and local trends.

Data User (cont'd)	Use
Private business and marketing staffs...............	Determine market areas, trends and local conditions; and to measure current and historical trends by industry or product.
Educators and students...............................	Research on national trends and lecture background material on uses and kinds of statistics.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Other programs and publications
Subactivity: General research

Goals and Objectives

Goals:

The goals of General Research are to develop new or improved methods and procedures to conduct the Census Bureau's statistical operations and related activities; and as feasible, to provide theoretical foundations for such methods and foster their efficient implementation and automation.

Objectives:

The objective of General Research is to develop the Census Bureau's general research capability in time series analysis, survey design and estimation, and special experimental and evaluation studies.

Base Program

The General Research investigates problems where the solution is applicable to more than one program, or where an unified approach can be more effective than individual efforts by each program. These areas of study and application include sampling theory and design; time series analysis; and other aspects of the collection, processing or analysis of data which bear on the cost and usefulness of the resulting information. This continuing research effort allows scientific and technology developments, resulting in improved statistics and a higher level of responsiveness to data users.

For FY 1991, the Census Bureau will continue the development of time series methods to improve seasonal adjustment and demographic projections as well as economic and demographic survey estimates. It will also develop and refine small area estimation techniques for use in coverage evaluation of the decennial census and in augmentation of economic statistics, including county business patterns data.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Other programs and publications
Subactivity: Data systems development

Goals and Objectives

Goals:

The goals of Data Systems Development are to identify, adapt, and promote the implementation of new and improved automated systems and advanced technologies that can satisfy the Census Bureau's unique processing requirements.

Objectives:

The objective of Data Systems Development is to undertake a program of applied research and development focusing on technological solutions to Bureau-wide processing problems. Centralized applied research facilitates the transfer of emerging technologies from the private sector and promotes the adoption of such technologies among the Census Bureau's statistical programs.

Base Program

The Data Systems Development program provides resources to identify, adapt, test and evaluate advanced hardware and software technologies that will improve the processing, timing, quality and usefulness of Census Bureau statistical programs. The applied research will focus on those technologies that offer the greatest potential benefits to major Census Bureau statistical programs. Among the technologies to be investigated and tested are:

--Improved methods of data capture for all censuses and surveys
--Document imaging technologies permitting the processing of electronic images
-Development of a centralized telecommunication control system
--Expanded use of expert systems and artificial intelligence
--Advanced database management software and hardware

For FY 1991 the Census Bureau will continue to test various methods of data capture using state-of-the-art technology, explore potential uses of optical imaging technology; contract with outside experts to better utilize artificial intelligence in census processing and begin development of an advanced telecommunication system. Projects will be selected and prototype technology will be procured to permit testing in a production environment.

CONSULTING AND RELATED SERVICES
(Obligations in thousands)

	FY 1989 Actual	FY 1990 Estimate	FY 1991 Estimate
Consulting services........................	$147	$139	$137
Management and professional services......	262	150	141
Special studies and analyses..............	...	24	225
Management and support services for research and development..............	...	...	...
TOTAL..................................	$409	$313	$503

The principal uses for advisory and assistance services in the salaries and expenses appropriation are to make the data collected by the Census Bureau more useful to the user community.

Advisory and assistance services were procured for the Survey of Income and Program Participation (SIPP), to acquire computer programming and related services to expand the amount of data available for research and evaluation from SIPP.

In the foreign trade program, advisory and assistance services will be procured to evaluate the present system of compiling statistics on foreign trade, and recommending improvements.

On a smaller scale, advisory and assistance services are also procured to obtain skills unavailable in the Bureau for our international research program, and for a variety of specialized topics in our current demographic surveys programs.

Bureau of the Census

PERIODICALS, PAMPHLETS AND AUDIOVISUAL PRODUCTS
(Obligations in thousands of dollars)

	FY 1988 Actual	FY 1989 Actual	FY 1990 Estimate	FY 1991 Estimate
Periodicals....................	$ 372	$ 337	$ 354	$ 371
Pamphlets......................	2,165	4,804	4,200	3,200
Audiovisuals...................	64	43	40	38
Total......................	$ 2,601	$ 5,184	$ 4,594	3,609

Periodicals: Included in these figures are Census and You, Monthly Product Announcement, Bureau of the Census Catalog, and Statistical Abstract of the United States. The minor decreases reflect improvements in production automation.

Pamphlets: This category includes all statistical publications other than periodicals, comprising monthly, quarterly, annual, and irregular statistical reports. The increase for FY 1989 reflects full production of reports for the 1987 Economic, Agriculture and Governments Censuses (EAGC), as well as moderate inflation in salaries, expenses, and printing costs. The estimate for FY 1990 reflects continued production of EAGC reports, and the estimate for FY 1991 reflects initial production of 1990 Decennial Census reports.

Audiovisuals: This category includes both in-house and contracted costs for producing artwork and photographic slides and transparencies for presentations. The decreases reflect reduced audiovisual activity for the 1987 EAGC and the 1990 Decennial Census, as well as moderate inflation in salaries, expenses, and costs of photographic materials.

Appropriation Language and Code Citations:

1. For expenses necessary to collect and publish statistics for periodic censuses and programs provided for by law,

13 U.S.C. 4, 6, 12, 131, 141, 142, 161, 181, 191;
15 U.S.C. 1516; 42 U.S.C. 1973 aa-5.

13 U.S.C. 4 authorizes the Secretary to "perform the functions and duties imposed upon him by this title" or he may delegate any of them "to such officers and employees of the Department of Commerce as he may designate."

13 U.S.C. 6 provides that "The Secretary...may call upon any other ... establishment of the Federal Government...for information pertinent to the work provided for in this title." This section also provides that "The Secretary may acquire, by purchase or otherwise, from States, counties, cities, or other units of government,..., or from private persons and agencies such copies of records, reports, and other material as may be required for the efficient and economical conduct of the censuses and surveys provided for in this title."

13 U.S.C. 12 provides that "The Secretary is authorized to have conducted mechanical and electronic development work as he determines is needed to further the functions and duties of carrying out the purposes of this title and may enter into such developmental contracts as he may determine to be in the best interest of the Government.

13 U.S.C. 131 provides that "The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses, including the distributive trades, service establishments, and transportation (exclusive of means of transportation for which statistics are required by law to be filled with, and are compiled and published by a designated regulatory body), in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof."

13 U.S.C. 141 provides that "The Secretary shall, in the year 1980 and every 10 years thereafter, take a decennial census of population as of the first day of April of such year, which date shall be known as the decennial census date, in such form and content as he may

determine, including the use of sampling procedures and special surveys."

13 U.S.C. 142 provides that "The Secretary shall in 1979, in 1983, and every fifth year beginning after 1983, take a census of agriculture."

13 U.S.C. 161 provides that "The Secretary shall take, compile and publish for the year 1957 and for every fifth year thereafter a census of governments."

13 U.S.C. 181 provides that "The Secretary...shall annually produce and publish for each State, county and local unit of general purpose government which has a population of fifty thousand or more, current data on total population and population characteristics and, to the extent feasible, shall biennially produce and publish for other local units of general purpose government current data on total population."

13 U.S.C. 191 provides that "Each of the censuses authorized by this chapter shall include each State, the District of Columbia, the Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control or sovereignty."

15 U.S.C. 1516 provides that "The Secretary of Commerce shall have control of the work of gathering and distributing statistical information naturally relating to the subjects confided to his department... He shall also have the authority to call upon other departments of the Government for statistical data and results obtained by them; and he may collate, arrange, and publish such statistical information so obtained in such manner as to him may seem wise."

42 U.S.C. 1973 aa-5 directs that "The Director of the Census...conduct a survey to compile registration and voting statistics: (i) in every State or political subdivision with respect to which the prohibitions of section 1973b(a) of (42 U.S.C.) are in effect, for every statewide general election for Members of the United States House of Representatives after January 1, 1974; and (ii) in every State or political subdivision for any election designated by the United States Commission on Civil Rights."

2. $316,104,000 to remain available until expended:

No Specific Authority

This phrase provides for extended obligation authority which would be restricted to the current fiscal year by 31 U.S.C. 1301.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Economic statistics programs
Subactivity: Economic censuses

Goals and Objectives

Goals:

The goals of the Economic Censuses are to provide comprehensive statistics on the level of U.S. economic activity and the characteristics of industrial and business establishments at the country, state and local levels and outlying areas.

Objectives:

The objectives of the Economic Censuses are to initiate planning and improvements in the methodologies used in the collection, processing and publication of the economic censuses; to plan data content; to enhance programs designed to minimize respondent burden and provide respondent assistance; and to ensure the quality of data collected in the censuses.

Base Program

Title 13 U.S.C. 131 requires the censuses of manufactures, mineral industries, construction industries, retail and wholesale trade, service industries, transportation and other businesses every five years covering the years ending in 2 and 7. The results of these censuses are summarized and presented for various classification such as kind-of business, geographic location (state, county, metropolitan statistical areas, city and place), sales size, employment size, legal form of organization and degree of specialization.

The economic censuses represent the primary source of facts about the structure and function of the U.S. economy, providing essential information to government and business. These censuses furnish an important part of the framework for composite measures such as the gross national product and input-output analyses. In forecasting and planning, it is especially useful to analyze the national product in terms of the elements which determine its size and composition. The economic censuses make this possible by providing weights and benchmarks for indexes of industrial production, productivity and prices. The censuses also furnish benchmarks and sampling lists for the Census Bureau's current economic programs. Business enterprises, trade associations, banks, investors, research groups, educational institutions and unions use data from the censuses for the purposes of planning expansion programs, selecting locations for new establishments, forecasting sales trends, determining market potential, checking sales and advertising performance, and performing other analyses. The information is also used to revise the Standard Industrial Classification (SIC) system.

The 1992 Economic Censuses will include about 13 million establishments engaged in mining, manufacturing, construction, retail, wholesale, selected services and transportation operations. The Census Bureau minimizes respondent burden by sending questionnaires to less than 33 percent of these establishments. Administrative records were used to obtain information from the remaining establishment which included the smaller businesses.

The 1992 Enterprise Statistics program will regroup census data for establishments under common ownership or control to show the economic characteristics of the owning or controlling firm.

The 1992 Economic Censuses of Outlying Areas will encompass Puerto Rico, Virgin Islands, Guam and Northern Mariana Islands. In these areas, the Census Bureau will collect data on retail trade, wholesale trade, selected service industries, construction industries, and manufactures (but not minerals and transportation). The mail canvass will be supplemented by personal interviews in Puerto Rico and the Virgin Islands; elsewhere, the enumerators will visit each establishment.

Fiscal year 1991 is the second year in the six year cycle of the 1992 Economic Censuses. This is a critical year in the funding cycle because planning and preparatory activities will establish the scope, coverage, content and methodologies that will be employed in the collection, processing, and publication of the censuses. Planning activities cross all line items.

Planning and preparatory activities are especially important because of the expanded census scope. For the first time, the 1992 Economic Censuses will collect and publish data for the finance, insurance, and real estate sectors; public utilities; communications; and those transportation industries not covered in the 1987 censuses. During FY 1991, the Census Bureau will complete the analysis of a small scale pilot survey of these industries and use this information to refine inquiries and instructions. After extensive contacts with data users and data suppliers, final decisions will be made concerning census content and forms design and the forms clearance process will begin. During FY 1991 the basic processing methodology will be determined and work will begin on the acquisition of required hardware and the development of processing specifications and software. Continued emphasis will be placed on identifying new technologies that can improve the timeliness and accuracy of census results.

The Census Bureau proposes to reallocate funding from FY 1994 to FY 1991 and FY 1992 for the 1992 Economic Censuses. This resource shift will devote additional resources to vital planning activities. Changing and emerging data requirements, combined with significant changes in corporate structure and recordkeeping practices demand that we devote more resources to 1992 census planning relative to prior censuses. New information requests have to be thoroughly evaluated with special attention given to the availability of data in company records. New, improved, and less burdensome data collection methods must be investigated and tested. All of these activities require earlier and more intensive contacts with companies. In addition, the long lead times associated with procurements of advanced processing technologies needed to further automate census processing also require that funds be available earlier in the processing cycle than in previous censuses. This funding shift will significantly improve census planning and processing without increasing the total cost of the 1992 Economic Censuses.

A brief discussion of each census follows:

Census of business. This includes the censuses of retail trade, transportation, wholesale trade and service industries. The Census of Retail Trade includes establishments engaged in selling merchandise to the public for personal or household consumption and services rendered incidental to the sale of those goods. The Census of Wholesale Trade includes establishments primarily engaged in selling merchandise to retailers and repair shops; to industrial, commercial, institutional, professional or agricultural users; or to other wholesalers. The latter also includes establishments acting as agents or brokers. The Census of Service Industries includes selected establishments engaged primarily in providing a variety of services for individuals, businesses and government establishment. As the first phase of the service sector expansion, the Census Bureau added 22 of 50 transportation service industries to the 1987 Census of Transportation. The expanded scope of the 1992 Economic Censuses will add the missing transportation industries as well as cover finance, insurance, real estate, communication and public utilities.

Census of construction. This census enumerates establishments engaged as general contractors, operative builders, special trade contractors, land subdividers and developers. Construction includes new work, additions, alterations, maintenance and repair.

Census of manufactures and mineral industries. The Census of Manufactures covers establishments engaged in the mechanical or chemical transformation of materials or substances into new products. The Census of Mineral Industries enumerates establishments engaged in the extraction of minerals including solids such as coal and ores, liquids such as crude petroleum, and gases such as natural gas.

Transportation characteristics program. For FY 1991, this program includes the Truck Inventory and Use Survey which provides the characteristics and operational uses of truck resources. It is based on a sample of private and commercial trucks from a universe of 35 million registrations. The Census Bureau collects and publishes establishment-based transportation statistics as part of the Census of Business.

The following programs are related to several of the individual economic censuses:

-- The Survey of Minority-Owned Business Enterprises determines the extent of business ownership by specific minority groups in the United States, i.e. Blacks, persons of Spanish origin, Asian Americans, American Indians and other minorities.

-- The Women-Owned Businesses program includes economic data on firms owned by women. The Census Bureau publishes information on the number of firms, employees, payroll and receipts.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Economic statistics programs
Subactivity: Census of governments

Goals and Objectives

Goals:

The goal of the Census of Governments is to provide benchmark figures in the areas of public finance and public employment; local government organization; powers and activities; state and local fiscal relationships; and property tax administration and related subjects.

Objectives:

The objectives of the Census of Governments are to identify the most pressing data needs in the areas of public finance, public employment, local governments and tax administration; and to develop procedures and arrangements which will gather and present the data in the most efficient and useful way.

Base Program

Title 13 U.S.C. 161 requires the Census of Governments on a quinquennial basis. Title 13 requires "each such census shall include, but not be limited to, data on taxes and tax valuations, governmental receipts, expenditures, indebtedness, and employees of states, counties, cities and other governmental units."

The Census Bureau has conducted the Census of Governments, as currently structured, every five years since 1957. The census is the only source of comprehensive and uniformly classified data on the activities of state and local governments. Findings from the Census of Governments are used by:

- --Congress and Federal agencies in planning and appraising programs involving intergovernmental relationships, Federal revenue and debt policies, and distribution of selected Federal grant-in-aid programs;
- --State legislative and executive agencies, local government officials and civic groups to compare financing, employment levels, and pay and operations among geographic areas and to improve equity in property tax administration;
- --Financial and business firms concerned with municipal security ratings and relative levels of taxation and expenditure in particular areas; and
- --Economic research agencies, textbook writers and educators to describe the nature, scale and trends of governmental activities in the United States.

The Census of Governments consists of four principal parts: government finance, public employment, government organization, and taxable property values. The Census Bureau collects most census information by mail from 83,200 local government units, but some units provide data on magnetic tapes and computer printouts. We conduct the field enumeration to gather the data needed for the Taxable Property Values Survey and to follow-up on non-respondents and difficult cases for other surveys.

The FY 1991 budget provides for further planning of the content, collection and processing of data for the government finance, public employment, governmental organization and taxable property value phases of the 1992 Census of Governments.

- --Planning, direction and review. Funds provide an evaluation of the 1987 and 1992 censuses. It involves a complete review of the tabular presentation of the 1987 census results, with the view toward improving the clarity and utility of the 1992 data.
- --Government finance. This census phase includes the following activities: discussing table specifications with Publication Services Division; reviewing computer specifications for all tables; initiating the correcting or rewriting of computer specifications both for tables and processing; submitting forms for OMB approval; and reviewing and initiating all joint collection arrangements with state governments.

--Public employment. Activities include preparing final recommendations for 1992 census survey content and procedures; preparing survey instruments; preparing the request for OMB approval; identifying and contacting possible central data sources; and beginning preliminary computer programming.

--Governmental organization. This activity continues planning operations directed toward the governmental organization phase of the census. It focuses on legislative research; prelist canvass of special districts; file updating; questionnaire design, clearance and printing; and mailout preparation.

--Taxable property values. Funds provide for: continuing work on electronic data collection in approximately 750 assessment jurisdictions; preparing field enumeration training materials and survey processing procedures; writing and testing computer programs; selecting the 1992 jurisdiction sample; conducting legal research; and canvassing of state agencies to obtain certain aggregate assessment data needed to benchmark 1992 census results.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Economic statistics programs
Subactivity: Census of agriculture

Goals and Objectives

Goals:

The goals of the Census of Agriculture are to provide relevant, comprehensive statistical information on the agricultural sector of the U.S. economy at the national, state and county levels; to provide descriptive data on farm enterprises; to provide data on selected agricultural subjects for the years following the census at the national, state and regional levels; and to provide data on irrigation at the national, state and district levels.

Objectives:

The objectives of the Census of Agriculture are to maintain and improve the relevance, quality and timeliness of information collected; to provide improved comparability of economic data from the agricultural sector with data from the other economic sectors; and to improve the accessibility of data for national and other geographic area analyses of the agricultural sector.

Base Program

Title 13 U.S.C. 142 requires the Census of Agriculture for years ending in 2 and 7, and the Census of Irrigation at ten year intervals for years ending in 7.

The Census of Agriculture provides statistical measures of the agricultural sector of the U.S. economy at the national, state and county levels. The basic information consists of the number of farms, farm acreage, operating expenditures, value of farmland, land use, statistics on crops and livestock, equipment, government loan and farm program participation, and farm practices, i.e., the use of pesticides, fertilizers, and irrigation. The Census of Agriculture is the only source of consistent, comprehensive national agriculture industry data for all states and counties.

The census provides agricultural data for a wide spectrum of users. For example, the Administration and Congress use the data to formulate and evaluate national farm programs. The Department of Agriculture uses the data to determine changes in the agriculture sector, to benchmark current data series and recurring and special sample surveys, and to prepare the farm sector accounts. The Bureau of Economic Analysis uses the data to prepare national economic accounts as well as statistics on regional income data. The Departments of Agriculture and Interior, state and local governments and others use on-farm irrigation data to evaluate water resource requirements and to develop national and local policies on agricultural water use and water reclamation projects. The Soil Conservation Service uses the data in providing appraisals of trends, status and conditions in irrigation as required by the Food Security Act of 1985. Agencies such as the Farm Credit Administration use production, sales and expenditures data to formulate and evaluate farmer loan and other credit programs for the agriculture sector. Local areas use census data to evaluate the need for farm support facilities such as equipment and farm suppliers, grain elevators and other marketing activities, and to develop programs which provide incentives to preserve agricultural lands. Farm associations use the data for planning programs for their membership. Agencies such as the Animal Plant and Health Inspection Service, Extension Service and Agriculture Stabilization and Conservation Service use the data to allocate resources to specific counties and to implement their programs. Federal programs allocate billions of dollars of funds annually based on census information.

FY 1991 is the second year in the six-year funding cycle of the 1992 Census of Agriculture. The funds support the continuation of the extensive review and evaluation with Federal and state agencies and other Census of Agriculture data users to determine the scope, content, definitions and classifications for the 1992 census. Evaluation, installation and testing of new processing equipment and procedures also will be underway, as well as developing the census mail list. The Census Bureau will continue planning for the five-year censuses of Puerto Rico, Guam, Northern Mariana Islands, and the Virgin Islands with review and consultation with the respective governments and data users on the content and procedures for the 1992 Census of Agriculture.

Planning, direction and review. This activity provides funds for the professional, technical and support staff required for conducting and evaluating the tests; determining collection and processing methodologies; and preparing specifications, procedures, and computer programs for the 1992 census. This includes introducing new technologies to the census processing. Identification of user publication needs, and analysis of the publication tables and electronic methods for data release will continue.

Census test. The funds provide for conducting the 1991 test of final content and methods.

Data collection. The Census Bureau will begin developing the collection requirements and specifications, developing the forms, and determining and obtaining Postal Service clearance of mailing packages. The funds also provide for beginning the preparation of the census mail list including obtaining source lists, preparing procedures and specifications and computer programs.

Data processing. Processing requirements will be determined, and specifications, procedures, and program preparation begun. Necessary equipment acquisition and installations will also be underway.

Sampling, statistical standards and evaluation. The Census Bureau will begin developing the specifications for the sample design, and weighting and reliability methodologies for the 1992 Census of Agriculture. Also, we will prepare the plans for the nonresponse survey and work with the U.S. Department of Agriculture (USDA) on the June Enumerative Survey as a coverage evaluation sample. The Census Bureau also will begin development of specifications for the edits and imputation, and disclosure avoidance methodology.

Other censuses and surveys. For the 1992 census, the Census Bureau will continue planning with governmental representatives and data users from Puerto Rico, Guam, the Virgin Islands, and the Northern Mariana Islands. In addition, we will determine scope and content and collection methodologies for these censuses.

Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Demographic statistics programs
Subactivity: Intercensal demographic estimates

Goals and Objectives

Goals:

The goals of Intercensal Demographic Estimates are to develop and prepare updated population and per capita income estimates for general purpose governmental units; and to develop and prepare a variety of data to meet diverse legislative needs.

Objectives:

The objectives of this subactivity are to provide updated population and per capita income estimates; to investigate and resolve all data challenges resulting from the use of these estimates; to provide a potential methodological framework as a basis for responding to data requests arising from the use of these estimates; and to provide data for local government and private industry use.

Base Program

Many Federal programs provide benefits to state, county and local units of government through the use of distribution formulas. The importance of population and income data in these formulas requires the development and use of current data. The Congress formalized this requirement in 1976 with the enactment of P.L. 94-521, requiring the Census Bureau to produce annual population estimates for units of general purpose government. The public law specifies the use of such estimates by Federal agencies in the administration of Federal program benefits to state, county or local units of government when the population is used to determine the amount of benefits.

Administrative records already collected by the Federal Government (such as income tax returns, Medicare enrollment records, and vital statistics) are a primary source of information for the intercensal estimates. For example, the individual income tax returns are geographically coded and used to develop migration statistics. The current geographic coding process uses methods and data prepared in 1980. In FY 1991, we will develop more currently accurate and dynamic methods and data to geographic code the administrative records, incorporating selected data included in the TIGER geographic coding files. These data, when combined with other geographic information, make it possible to provide current estimates for states, counties and local governmental units eligible to participate in Federal benefit programs. In terms of reliability, the population estimation system using administrative records yields results which compare favorably with estimates prepared by other methods for states and counties. Current estimates for local governmental units provide geographic detail and a level of accuracy in line with the quality level recommended or proposed for figures required for legislative purposes. The Census Bureau is using the findings of evaluation studies to further improve the estimates.

The Census Bureau will research and resolve all data challenges resulting from the use of the estimates by Federal agencies. The review process involves checking for clerical and logical errors on input data including births, deaths, institutional population, military station strength and barrack population, and migration data. It also reviews any supporting data supplied by the challenging government. If necessary, the Census Bureau will ask its local contacts--developed through the Federal State Cooperative Program for Population Estimates--for comments and any new data available on the challenging area's current population. A review, challenge and appeal process has been instituted within the Census Bureau whereby local areas can bring their challenges, both informally and formally, before submitting them to a hearing examiner.

Beyond the use on the distribution of Federal funds, the estimates for the geographic distribution of population provide the data needed to make decisions such as the location of retail outlets and manufacturing establishments, state and local government services, planning of utility service, and redefining metropolitan areas.

During FY 1991, the Census Bureau will evaluate the estimation methods used during the 1980's for states and substate areas by preparing population estimates for 1990 and comparing them against the counts from the 1990 census. Results from this "test of methods" will be used to select the estimation techniques to be used throughout the 1990's. The Census Bureau will continue to resolve challenges relating to the estimates; and prepare migration flow tabulations. The estimates and migration data will be sent to the appropriate Federal agencies for their use.

Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Demographic statistics programs
Subactivity: Decennial census

Goals and Objectives

Goals:

The goals of the Decennial Census are to provide official population counts mandated for apportionment of the U.S. House of Representatives and redrawing state legislative districts; and to provide comprehensive and accurate population and housing statistics to meet national, state, and local data needs for the 1990's. The census will provide data for political and statistical areas: the Nation as a whole, states, counties, places, census tracts, and blocks.

Specifically, the program goals of the 1990 Decennial Census are to:

-- Meet all legal deadlines for providing reapportionment data to the President and the Congress by December 31, 1990, and redistricting data to the states by April 1, 1991;
-- Expedite the availability of the data to users;
-- Maintain a high rate of overall coverage, improve the accuracy of small area data, and reduce the undercount differential for population groups and geographic areas;
-- Maintain the confidentiality of the census results; and
-- Strike an appropriate balance between the length of the questionnaires and data needs.

Objectives:

The objectives of the Decennial Census in FY 1991 are to complete data collection activities such as post-census local review; to deliver apportionment counts to the President and redistricting data to the states; to begin release of data products containing information based on census questions asked of everyone; to complete coding of written responses to questions asked of only a sample; to begin creating the file containing detail from the sample questionnaire; and to produce results from evaluations of census coverage.

Base Program

Title 13 U.S.C. 141 authorizes the conduct of the Decennial Census for the apportionment of congressional representation. For the 1990 census, the Census Bureau will enumerate the total population and housing units in the 50 states, District of Columbia, Puerto Rico, and the Outlying Areas, including the Virgin Islands, Guam, the Northern Mariana Islands, Palau, and American Samoa. The census produces valuable data on changes in population and housing for thousands of political and statistical areas. The census collects social and economic characteristics such as age, sex, race, ethnic origin, education, unemployment, occupation, and income; and housing characteristics such as tenure (occupancy of unit by owner or renter), rental costs and value of property.

The Congress relies on census information for apportionment purposes as well as formulating and planning public policy. Most states use census data to redraw legislative boundaries. State and local governments, businesses, educational institutions, and individuals use decennial data for decisions affecting nearly every aspect of American life. For example, government agencies use census data to develop transportation policy, plans, and programs, and to fund highway construction and public transit systems. Education data provide educational attainment levels and identify local needs for academic, vocational, and bilingual education programs.

Federal agencies use census data to fulfill their legislative requirements and census data provide the basis for allocating billions of Federal assistance dollars. Specifically, the Housing and Community Development Acts of 1968 and 1974 and the Housing and Urban Development Act of 1970 require housing data for the allocation of funds; demographic and social characteristics fulfill requirements in other areas, such as under the Voting Rights Act, the Older Americans Act of 1965 (as amended), the Adult Education Act, the Civil Rights Acts of 1957 and 1964 (as amended), and the Equal Employment Opportunity Act of 1972.

Timely and accurate data improve the quality of the decisions and allocations of funds. The requirement to maintain and improve the quality and timeliness of data to meet these needs was a priority in the Census Bureau's 1990 planning process.

Another major element in the Census Bureau's planning process was to test, evaluate, and improve all major census operations to ensure quality, timeliness, and control. The objectives of the tests were to overcome problems of control, processing, and coverage encountered in 1980 and to prepare for the 1990 census workloads associated with growth in housing units and population since 1980.

A major, unprecedented advancement over the 1980 census design has been the increased use of automation. Two major improvements that will help us publish accurate and timely data are the computer-based address control file and the automated Management Information System. The address control file contains a complete housing unit inventory necessary to ensure the inclusion of each household in the census. It will allow us to follow-up promptly on households that did not mail back their questionnaires and to process data concurrently with the field data collection operation. The operational timing of the 1990 census is extremely tight and critical if the Census Bureau is to meet the mandated dates for delivering the apportionment counts to the President and redistricting data to the states, and to provide timely census data products. The Management Information System will be used to track the costs and progress of thousands of interrelated census activities throughout the census cycle, improving accuracy, effective decision-making and use of resources. These innovations will help us to produce accurate 1990 census data in a timely manner.

Highlights of Cyclical Changes

The FY 1991 base request of 5,955 FTE and $245,789,000 represents a decrease of 47,692 FTE and $992,981,000 from the FY 1990 levels. The decrease in resources reflects the transition from the highly labor-intensive field operations conducted in FY 1990 to processing, tabulation and publication of data in FY 1991. While budget resources decrease significantly, the FY 1991 program is important because it is the year that we achieve our goals for delivering apportionment counts to the President and redistricting data to the states. FY 1991 is the first year that the official results of the 1990 census enumeration will be available to the public. We begin release of the 1990 census data products whose quality and timeliness depend on the success of the preparatory and census operations that preceded them.

In early FY 1991, we will complete the local review program which allows local officials to review and identify problems with the 1990 census counts. This is the last data collection operation after which we will close the final set of district offices. Also, we will complete data capture operations and begin creating the data files that form the basis for all publications that will be released. The need for adequate resources in FY 1991 is critical, because delays could jeopardize our ability to meet our mandated deadlines and to ensure timely release of data products.

The following describes the FY 1991 activities for the Decennial Census:

Planning, direction, and review. This provides for the administration, coordination, and control of all aspects of the census. The automated Management Information System (MIS) enables Census Bureau managers to track the cost and progress of each major census operation throughout the year. In FY 1991, all major data capture, tabulation and publication activities will be monitored via this system. The MIS is providing better and more timely information that enhances the Census Bureau's ability to manage the multiple complex operations of the census.

Data Collection. This provides the implementation and management of data collection operations, including the 13 regional census centers' direction and control of all field activities. These regional offices managed the 1990 census enumeration activities, for which we hired nearly 500,000 temporary employees and opened 496 local district offices. Most of these temporary employees are released and most district offices closed during FY 1990 after completing peak operations to follow-up households that did not return their questionnaires.

The 109 master district offices will remain open through October 1990 to conduct the post-census local review program. The local review program provides local officials with the opportunity to participate in the census process. The Census Bureau encourages these local officials to use their knowledge of the community to identify potential problems in the coverage and geographic allocation of housing units. Local officials will review preliminary 1990 census data and the district offices will canvass those areas identified as having potential coverage problems. We will enumerate any housing unit that had been missed. We will also correct our address list and the delineation of political boundaries based on this review.

These district offices will close after completing the local review canvass, and dispose of or return supplies, furniture and equipment to headquarters or to stock. The regional census centers will continue to resolve the payroll, personnel, and operational problems that may occur with employing and releasing several hundred thousand temporary census workers. The regional census centers also will help resolve outstanding problems with political boundaries identified during the local review program, and provide direction and control of geography, research and evaluation and outreach programs described under the applicable budget line item.

Operations. The 1990 data processing plan represents a marked improvement over 1980 processing. The network of seven processing offices will have processed the questionnaires concurrently with data collection. This change allows the Census Bureau to detect and correct errors on the questionnaires while the field offices are still open, and to accelerate delivery of census data products to users. In FY 1991, all processing offices will remain open, and will employ up to 8,000 workers to complete data capture activities, including FACT 90 capture of questionnaires, keying of written responses from the sample questionnaire, and clerical resolution of automated coding operations.

Coding of written responses from the sample questionnaire involves three types of information and three automated systems, newly designed for 1990, to support processing of this data--general coding; industry and occupation coding; and place-of-work, place-of-birth and migration coding. For general coding of items such as ancestry, race and the like, codes will be automatically assigned using computer systems at headquarters. Those items that cannot be coded by the computer (representing unique responses) will be resolved by subject-matter experts and entered into the data file. We complete coding of the industry and occupation responses on the sample questionnaire for each person in the labor force. We will automatically assign industry and occupation codes to an estimated 28 million persons. Those responses that cannot be automatically coded will be resolved through computer-assisted clerical operation in a processing office. Place-of-work, place-of-birth and migration coding is budgeted and described with other geographic activities under the operations line item.

During FY 1991, analysts at headquarters will review selected census data for completeness and accuracy, consulting with the field and processing offices to resolve problems and inserting corrections in the computer files. This process will conclude in FY 1991 with clearance of the data capture files for the tabulation/publication processes and with certification of each states' population counts for calculation of apportionment.

The Census Bureau will complete the process to edit/impute and apply confidentiality edit procedures to the data from questions asked of everyone, or 100-percent data. The result of this process is the computer file (edited detail file) that allows us to produce 100-percent data tabulations. Similar work for the data from the sample questionnaire will begin in FY 1991. This process will include weighting the sample data so that specified characteristics in specified geographic areas are comparable with 100-percent counts.

In 1991, our Baltimore, Maryland Beta Test Center and National Support Center (NSC) will continue to provide support to the decentralized computer sites for the regional census centers, district offices and processing offices. The Beta Test Center has the ability to replicate the hardware and software configuration of any office and will improve the Census Bureau's ability to isolate the cause of specific system problems and resolve them. The NSC will provide a 'Hot Line' service to resolve problems in the decentralized processing operations or referral to headquarters staff. The NSC will continue to control the release of software to the computer sites for processing and geographic operations.

The Census Bureau started planning earlier for the Censuses of Puerto Rico and Outlying Areas, which includes the Virgin Islands and the Pacific Areas (Guam, the Northern Mariana Islands, and American Samoa) and has been working closely with the local officials to solicit their advice and determine their 1990 census data needs. (If the United States and Palau do not enter into a Compact of Free Association, the Census Bureau will also take a census in Palau.) The Census Bureau will have conducted the 1990 Census of Puerto Rico using list/enumerate procedures. The questionnaires were similar in content to the stateside questionnaires, with some changes to reflect unique socioeconomic, cultural, and climatological characteristics. Questionnaires, and field and processing materials were translated into Spanish. For the censuses of the Virgin Islands and the Pacific areas, the Census Bureau hired and trained advisors to assist these governments in taking their censuses.

In FY 1991, we will complete all data capture activities, including coding the written responses from the sample questionnaire, such as place-of-birth of parents and industry and occupation data. We will prepare and deliver the redistricting data and maps for Puerto Rico by June 1991. We will begin the preparation of data products for Puerto Rico, Virgin Islands, American Samoa, Guam, the Northern Mariana Islands and Palau. The tabulation and publication programs for Puerto Rico and the Virgin Islands will parallel the stateside program and will be complete at the end of FY 1993. The program for the Pacific Areas contains similar data but fewer products and will be complete at the end of FY 1992. The early planning and close working relationship with these areas will allow the Census Bureau to meet the data needs for these areas in a timely manner.

The Census Bureau, in cooperation with the U.S. Geological Survey, developed the Topologically Integrated Geographic Encoding and Referencing (TIGER) system to provide geographic support for the decennial census (and other programs) from a single, automated source. TIGER contains all geographic information needed to conduct field operations, tabulate and publish data, and will create the maps needed to support these activities.

The Census Bureau will conduct activities related to the update and use of the TIGER system for the 1990 census. Specifically, the Census Bureau will:

-- Complete the resolution of 1990 political boundary problems, including American Indian reservations and trust lands; these problems were identified and researched through the local review program;

-- Complete the definition of the statistical and administrative areas required for tabulating census data;

-- Complete software development for the production of publication maps from the TIGER file. We will also use the software to begin producing publication maps, for example, the county block, subdivision and census tract maps;

-- Update the reference files for coding place-of-work responses from the sample questionnaire, by working with local planning organizations to update employer name and location information; and

-- Continue to update the TIGER file to reflect new streets or to correct errors identified by enumerators or by local officials involved in census programs such as post census local review.

Another major FY 1991 activity is to code the place-of-work/migration/place-of-birth responses from the sample questionnaire. Place-of-work, place-of-birth and migration coding identifies the location of employment places, state or foreign country of birth, and place of residence 5 years ago, respectively. Place-of-work data identify the location of places of employment and are fundamental to state-wide, regional, urban transportation planning programs and are required for defining metropolitan areas. Migration data on the movement and distribution of the population are integral to understanding the impact of population movements on labor markets and the demand for services in states and local areas. Place-of-birth data are used to enforce the requirements of the Voting Rights Act and the Civil Rights Act of 1964 (as amended), as well as in bilingual education programs, immigration and refugee resettlement programs and in analysis of coverage of the census.

Product Development and Data Dissemination. To determine the design of the 1990 census tabulation and publication program, the contents of the data products and their dissemination media, the Census Bureau consulted with a wide range of data users, including the Congress, State and local governments (including American Indian and Alaska Native governments), businesses and marketers, national and local organizations and groups, researchers, academicians, librarians, and other interested groups.

We used formal and informal vehicles for obtaining recommendations from data users, such as through: 1) 65 Local Public Meetings held in major cities and/or state capitals; 2) 10 Regional Data Products Planning Meetings; 3) a National Conference on Data Products; 4) other conferences or meetings, professional organizations, and census advisory committees; and 5) ongoing communications with users in correspondence and so forth. The process included an examination of current and emerging legislation that could affect the requirements for census information, evaluations of tabulations and publications released from previous censuses, and a evaluation of new dissemination media such as Compact Disk-Read Only Memory (CD-ROM) and on-line information systems. The Census Bureau disseminated the proposed content of data products to data users for review and comment, and finalized them after review of their recommendations.

The design of the 1990 tabulation and publication program is similar in geographic coverage and content to the 1980 census. We will produce data products earlier, and in many cases, will issue the products in a different sequence and in additional formats.

Although the traditional dissemination media forms--printed reports and computer tapes--will provide the largest amount of 1990 census data to users, newer types of media will be used on a limited basis after we release the data products via printed reports and tapes. We will implement an on-line system to provide up-to-date information about the availability of data products and to carry selected 1990 data. A limited number of data products will be released on CD-ROM. Also, some products will be issued on microfiche but fewer than 1980.

In FY 1991, we will prepare and deliver the apportionment counts to the President by December 31, 1990. Participation by the states in the redistricting program for state legislatures (Public Law 94-171), has increased substantially, more than double the number for the 1980 census. In FY 1991 we will prepare and deliver the congressional redistricting data and maps to each State and the District of Columbia by April 1, 1991, as required in the legislation.

In addition, we will begin to prepare and disseminate the printed reports and computer summary tape files based on the census questions asked of everyone. Maps will be prepared to accompany these data products. These products are prepared for each State, the District of Columbia, and a United States Summary. Information in these early products will be shown for States, counties, places, minor civil divisions, American Indian and Alaska Native Areas, block groups, and so forth. Concurrently, work will be done on other standard, or general use, data products (based on questions asked of everyone as well as only a sample) that will be disseminated in FY 1992.

We will continue developmental work, such as preparing procedures, software and training materials, for the special tabulation and user defined areas programs. As in the past, we anticipate numerous requests for data that will not be available from our standard products. They require tabulations from census data files and will be produced on a user fee basis. Special tabulations are requested by a wide variety of users, including Federal agencies who have unique data needs for the allocation of funds, program planning and evaluation.

Promotion and outreach. The promotion and outreach efforts are designed to encourage public cooperation in the census. The Census Bureau fosters cooperation through its contacts with national organizations, census advisory committees, community-based organizations, and local leaders. In FY 1991, the outreach and promotion program will help inform the public of the results of the census, and introduce the public to the 1990 data products that resulted from the census. Most importantly, we will inform and assist the public in accessing and using the variety of 1990 data products at the national and local levels. Also, we will complete the Thank-you America Campaign to acknowledge those outside the Census Bureau who provided support.

Statistical research and evaluation. The research and evaluation programs will provide measures of error in census characteristics data and the sources of these errors. These programs can be characterized generally by three major areas of study: content, coverage, and procedures and processing.

Content programs will assess the quality of data from the 1990 census, provide information about the sources and magnitude of nonsampling errors introduced during data collection and processing, and will assess the effect of sampling, nonsampling, coverage, and geographic errors on data use.

Coverage programs encompass the post enumeration survey and demographic analysis to measure the undercount and develop subnational coverage measurements by different population characteristics. In FY 1991, we will complete data collection and processing activities for the post enumeration survey and conduct demographic analysis. We will evaluate the housing unit coverage of the census by housing characteristics, enumeration methodology and geography. Also, we will evaluate the effectiveness of coverage improvement programs and will identify where coverage deficiencies remain as well as evaluate the quality of our coverage evaluation techniques.

Procedures and processing programs will examine the new and expanded techniques used for the 1990 census. We will concentrate on the major innovations implemented for the first time in the 1990 census, specifically, automated, decentralized data processing; automated edit, coding and control procedures; and the automated geographic system. We will also evaluate the effect of the 1990 outreach and promotion efforts. We will determine if the new techniques were cost effective and whether they produced the desired results.

Residential finance survey. The Census Bureau has conducted the Residential Finance Survey (RFS) every ten years since 1950 as part of the Decennial Census of Housing. The RFS produces data on the financing of non-farm, privately-owned residential properties. The RFS is unique in several respects. Unlike other demographic surveys where the unit of reference is the person, household, or housing unit, the RFS covers properties. Second, the RFS collects information from two sources: property owners and mortgage lenders. Collecting mortgage data from lenders improves the accuracy of such data. The "Right to Financial Privacy Act of 1978" protects the release of financial records by financial institutions, however, the RFS is exempted from this statute because it is a component of the decennial census.

The 1991 RFS will specifically be designed to meet the data needs of the Bureau of Economic Analysis. Other Federal agencies, including the Department of Housing and Urban Development may provide additional funds for the RFS. These funds will be used to address the data needs of those agencies. The extent to which this funding continues to be available will determine the level at which these needs can be met.

BEA relies on data from the RFS to determine components of the national income and product accounts (part of the calculation of gross national product). Specifically, BEA needs accurate and complete information on personal consumption expenditures, net interest paid, rental income, and housing types. Other Federal agencies rely on RFS data and consider the RFS as a strategic source of benchmark information. The RFS data, including outstanding mortgage debt and outstanding debt held by individual mortgage lenders, along with statistics from other sources, have been helpful in assessing public policies affecting real estate and social welfare, and in developing and evaluating related proposals. Finally, the Congress uses data on mortgage finance to consider legislation and administrative actions on the availability of mortgage funds, to assess the credit risk associated with new mortgage instruments, and to study the proliferation of home equity loans. The Census Bureau is working with these and other users to design and develop the 1991 RFS.

The Census Bureau will send questionnaires to a sample of property owners selected from the 1990 decennial census address records. If the sample property is mortgaged, the Census Bureau will also contact the mortgage lenders. The results will be published and a computer microdata file will be prepared for data users by the fall of 1992.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Demographic statistics programs
Subactivity: 2000 Decennial Census

Goals and Objectives

Goals:

History shows the decennial census has been the occasion for pioneering new methods and technologies from the Hollerith punch card and the first automated data processing for the 1890 census, to the first use of a computer for the 1950 census, development of equipment for optical scanning of microfilm for the 1960 census, changing to mailed questionnaires for the 1970 census, and the use of computer-generated TIGER maps for the 1990 census.

For the 2000 Decennial Census, the Census Bureau will explore cost efficient ways to take the decennial census which concentrate on accomplishing its constitutionally related requirements and producing accurate, high quality data. The Census Bureau will explore options of both profound changes and evolutionary ones. Some changes will be the result of evaluation of the 1990 census. (Simultaneously, others in the Census Bureau will explore ways to collect other demographic and housing data outside the basic decennial census and increase their effectiveness by better targeting user needs.)

Objectives:

The objectives of the 2000 Decennial Census are to reduce (and perhaps redistribute throughout the decade) some of the enormous workload of the decennial census. Restructuring holds promise for improving the capability of the Census Bureau to conduct future censuses.

Specifically, the Census Bureau will attempt to:

o Improve the cost effectiveness of demographic and housing data collection efforts.

- Reduce and simplify the work in the basic decennial census and lessen its logistical requirements.
- Achieve appropriate levels of accuracy for the data depending on its uses.
- Take advantage of new technology that would improve cost effectiveness.
- Ensure that respondent burden levels are reasonable given the value of the data collected.
- Improve the manageability of the entire decennial census process.
- Diversify and reduce the risks now centralized in one large operation conducted only once a decade.

Base Program

The Census Bureau, Department of Commerce, Office of Management and Budget, General Accounting Office, and Congress (House Report 99-669) recognize that an immediate start for research and analysis for the 2000 Decennial Census is necessary. The decennial census is a highly complex and unique under-taking. Social, demographic, and economic changes, such as shifts in composition of the Nation's labor force, and changing living arrangements will necessarily call for some changes in the conduct of the next census. Experience has shown that longer lead times are required to fully test and evaluate program design options for data collection and processing. The associated technologies to support the design also require lengthy procurement and implementation processes.

The 21st Century Decennial Census Planning Staff's fundamental task is to direct and coordinate this early planning effort. It will define the scope and content of the early zero-based review of the decennial census process. It will organize initial assessments of the need for and feasibility of options and innovations. These options may include profound changes. They will certainly include changes resulting from 1990 experience and evaluation of the 1990 census. The 21st Century Staff will explore behavorial and societal trends affecting various alternatives, and analyze relative costs and benefits of those alternatives. The staff will consult and coordinate these efforts with Department of Commerce officials and other Executive branch agencies, and provide an opportunity for input and review by outside groups and census data users.

Bureau of the Census
Periodic Censuses and Programs
INCREASE FOR FY 1991

Activity: Demographic statistics programs
Subactivity: 2000 Decennial Census

		1991 Base		1991 Estimate		Increase/(Decrease)	
		Personnel	Amount	Personnel	Amount	Personnel	Amount
2000 Decennial Census.....	Pos./BA	12	$784	23	$1,531	11	$747
	FTE	13		21		8	

2000 Decennial Census (11 permanent positions, 8 FTE and $747,000). Funds will be used for early planning for the next census, especially to examine the need for innovative changes to meet future challenges and to test the effects of those changes on cost, quality and timeliness. Planning and procurement of automated systems require great lead times. House Appropriation Report 99-669 in particular suggests that research and development begin early on future census automation systems. Test censuses need to be started earlier, particularly if far reaching changes are being considered, with more time between each to allow for sufficient analysis of results. Lastly, early preparations are necessary to gain consensus among the various users and agencies dependent on decennial census information, and to allow time for any necessary legislative review.

Funds are requested for completing detailed benefit/cost studies of alternatives that have survived initial review and are proposed for serious consideration for future censuses. We will incorporate results from the 1990 Research, Evaluation and Experimentation program into our studies as they become available. Clearly, the cost of future censuses must be contained while necessary information is provided in an accurate and timely manner. Already the 21st Century Planning Staff has developed a preliminary cost modeling capability. We will be refining our cost modeling based on actual results from the 1990 census. We will validate and improve preliminary cost estimates. We will collect information on the distribution, actual use and value of the use of census information. We also will estimate the effects of proposed changes on accuracy, quality, and timeliness.

Funds are requested for continuing our exploration of the use of new technologies to improve the decennial census. We will study emerging technologies and their potential use and value in the decennial census. We will begin systematic definition of requirements and planning of system architectures. We will develop specific automation test objectives for field testing early in the 1990's.

Funds are requested for research and development of methods to use administrative records and modeling and estimating techniques as supplements to the data provided by a basic decennial census. We will focus on developing more cost effective ways to provide small area data estimates of value to current users of decennial census data. Such research and development efforts may also provide methods for updating census data during the decade without the expense of large scale surveys.

Funds are requested to begin planning for field tests of new census content, methods, technologies and field structures in 1993, perhaps a major field test. Our approach will be to focus on testing more innovative alternatives early in the decade. In 1991 we should establish test objectives, plan experimental designs, begin site selection and develop a schedule.

JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Sample redesign
Subactivity: Sample redesign

Goals and Objectives

Goals:

The goal of Sample Redesign is to improve sample efficiencies and maintain confidence in the major Federal socioeconomic indicators.

Objectives:

The objectives of this subactivity are to investigate and modify the sample design of major current surveys, improving the quality of data and the cost effectiveness of the sample selection, collection, tabulation and dissemination processes.

Base Program

This program provides for sample redesign and estimation for the major current demographic surveys based on the 1990 census. The Census Bureau conducts major household surveys which provide essential data for the public and private decision-making process. These survey data form the basis for a large portion of the Federal Government's socioeconomic indicators. The surveys include the Current Population Survey (sponsored by the Census Bureau and the Bureau of Labor Statistics), American Housing Survey (Department of Housing and Urban Development), National Health Interview Survey (National Center for Health Statistics), Consumer Expenditure and Point of Purchase Surveys (Bureau of Labor Statistics), National Crime Survey (Department of Justice), Survey of Income and Program Participation (Census Bureau), and Housing Vacancy Survey (Census Bureau). The redesign effort is expected to produce efficiency gains over a ten year period which will maintain public confidence in the statistics produced.

The Census Bureau will concentrate on finalizing the methods of sample implementation; and developing computer and sampling systems and field procedures to implement efficient methods of sample maintenance for the decade.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Geographic support
Subactivity: Geographic support

Goals and Objectives

Goals:

The goal of Geographic Support is to provide the basic maps, reference files and associated processing systems needed to meet the geographic requirements of the periodic censuses and programs.

Objectives:

The objectives of Geographic Support are to portray accurate boundaries of all the legal and statistical areas for which the Census Bureau tabulates data along with the roads and relevant map features required for data analysis and field operations; to document the relationships among the types of geographic areas for which the Census Bureau tabulates data; to apply automated methodologies to provide these geographic support services; and to cooperate with the Geological Survey, U.S. Department of the Interior, to avoid duplication of Federal efforts in map automation.

Base Program

The automated Geographic Support subactivity supports the Census Bureau's goals of controlling costs and improving the timeliness of information from the Census Bureau's periodic programs, current sample surveys, and other activities. The availability of complete, nationwide geographic files provides the capability for efficient production of high quality maps, rapid assignment of residential and business addresses to the correct geographic locations, efficient design of sample surveys, and automation of selected aspects of the periodic programs' data collection, processing and dissemination processes.

The Census Bureau will continue updating the legal boundaries in the automated geographic files for all counties and incorporated places required for Census Bureau programs. The Census Bureau gathers the information needed for this purpose from appropriate local officials who record map changes that result from annexations, detachments, new incorporations or disincorporations. The response rate for this Boundary and Annexation Survey exceeds 95 percent; nearly half of the governmental units report one or more changes.

The Census Bureau will maintain and enhance the address reference information in the automated geographic files for the major urban areas of the United States. We will enhance the address reference information for the major urban areas by updating it using address information compiled during the 1990 Decennial Census. This information permits the rapid assignment of over 60 percent of all household and economic establishment addresses to the correct geographic locations with limited staff intervention.

Maintaining the content of these automated geographic files throughout the decade provides the capability to generate the maps and other geographic products required for the decennial census; the economic, agriculture and governments censuses; post-1990 sample survey redesign operations; state and local redistricting operations; and preparation of materials for innovative programs associated with the 2000 Decennial Census and future Census Bureau statistical programs. They will permit the Census Bureau to classify the geographic locations of housing units, farms, and economic establishments according to the data tabulation requirements of each periodic program, as well as permit the production of the maps that data users require to effectively use the data products.

In FY 1991, the Census Bureau will begin to develop prototype systems to update the automated geographic files using information gathered in consultation with other Federal agencies as well as state governments across the United States. In addition, we will begin to enhance the major components of the computer systems required to support the production of maps and related geographic materials needed for the periodic programs and sample surveys.

The Census Bureau will continue to provide the geographic products needed by local officials to verify and update the locations of county and incorporated place boundaries and will integrate the changes received from the local officials into the automated geographic files, further improving the capability to assign households and economic establishments to the correct geographic areas.

In FY 1993 and beyond, the base program funding increases. This increased level of funding provides for continuing support for the automated geographic-cartographic production system. It includes maintenance of the previously acquired systems and the acquisition of remaining equipment components. This overall system will provide for the storage, maintenance and updating of the geography of the United States on machine-readable media.

Department of Commerce
Bureau of the Census
Periodic Censuses and Programs
JUSTIFICATION OF PROGRAM AND PERFORMANCE

Activity: Data processing systems
Subactivity: Data processing systems

Goals and Objectives

Goals:

The goal of the data processing systems activity is to provide a computer environment which is efficient, responsive, and fully adequate for processing and generating economic and demographic statistics.

Objectives:

The objectives of the data processing systems activity are to provide total automated data processing (ADP) support and operational services for processing current and census programs; to provide effective planning and implementation of a comprehensive, long-range ADP acquisition program; and to increase productivity by providing computer (and related) tools to automate manual and other labor-intensive census operations.

Base Program

This program provides for the rental and/or purchase of equipment and other supporting activities related to the Census Bureau's general purpose computer facility. Detailed studies of workload and hardware/software requirements provide cost-effective alternatives, with decisions to lease or purchase specific equipment based on comparisons of costs and the expected usage periods.

The Census Bureau will continue to concentrate long-range planning activities on automated system support to conduct and process the 1990 Decennial Census, replacing outmoded computer facilities, and increasing automation in the headquarters and in the field. The needed ADP facilities and services will be acquired in accordance with Department of Commerce guidelines and the long-range ADP plan.

Specifically, the Bureau of the Census will continue the following activities during FY 1991:

Site preparation ($100,000). This provides for continuing renovations and modifications to the physical areas housing the major computer systems and related ADP equipment.

Printers ($247,000). This provides for continuing lease-to-ownership and/or maintenance expenses associated with both on-line and off-line printing subsystems.

Interactive terminals ($500,000). This provides for continuing replacement of outmoded terminals and acquisition of intelligent end user workstations. These devices are integral components of the Census Bureau's overall plan to enhance the productivity of programmers and non-programmers. Coupled with "user-friendly" software, increased on-line data storage, and effective training, this equipment provides the primary tools and techniques necessary for efficient program development and automation of existing manual procedures.

Distributed communications processors (DCP) ($100,000). This provides for continuing maintenance expenses associated with the communication front-end processor. This system allows us to balance the terminal communications among the four large-scale mainframes and expedite response time for all interactive terminal users.

Field automation ($341,000). This provides for continuing maintenance expenses for equipment used to automate many of the labor-intensive administrative operations performed in regional offices. These systems are designed to increase the efficiency of general office functions, such as budget, payroll, and personnel administration.

Office automation ($172,000). This provides continuing maintenance expenses for the minicomputers used to automate many of the manual office processes and procedures at headquarters. These systems incorporate capabilities such as stored logic with communications, data base management, data entry, general data processing, facsimile (electronic mail), and administrative support/record processing.

Data Preparation Division automation ($237,000). This provides for continuing maintenance of production control and other automation-related systems at the Jeffersonville, Indiana processing facility. This equipment supports functions associated with automated processing, monitoring and flow control activities, as well as mail handling operations.

Tape drives ($336,000). This provides for continuing maintenance of tape drive subsystems. This equipment incorporates improvements in tape movement speeds and recording methodologies.

Integrated statistical laboratory ($100,000). This provides for continuing maintenance and associated software expenses for a system which contains a network of terminals and microcomputers tied to a small-scale computer. Because of its exclusive dedication, it provides for both the high-speed interactive capability and the use of highly-sophisticated user-friendly software needed for effective and timely statistical analysis.

Publication support system ($198,000). This provides for continuing support and maintenance of a Census Bureau-wide system for the interactive preparation of publications, including a standardized computer-generated, quality graphics capability. This system automates all preliminary and final publication processes, allowing significant improvements in the overall timeliness of data releases.

Geographic support system (GSS) ($2,446,000). This provides continuing support for an automated geographic-cartographic production system. It includes maintenance of the previously acquired systems, and the acquisition of remaining equipment components. This overall system will provide for the storage, maintenance and updating of the geography of the United States on machine-readable media.

On-line data storage ($1,300,000). This provides for continuing maintenance expenses of the Census Bureau's on-line storage systems. These disk subsystems reduce tape handling (and the associated human errors), provide an environment necessary to promote interactive processing by nonprogrammers, and decrease turnaround time for the testing and use of computer programs.

Computer replacement #1 ($600,000). This provides for the continuing maintenance and support expenses for the recently acquired UNISYS 1100/94 mainframe. This system is essential to process the Census Bureau's expanding survey and workload requirements.

Computer replacement #2 ($10,217,000). This provides for the continuing maintenance and support expenses for the mainframe computer system acquired in FY 1990, as well as additional equipment. The additional equipment will bring the back-up site to the required computing capacity necessary to process and deliver the decennial census tabulations and other critical time sensitive programs. This also provides for the maintenance and support of the large interactive minicomputers acquired in FY 1990, as well as some logistical expenses for the redeployment and reinstallation of the minicomputers used in the backup and support of the 1990 Decennial Census. These systems make provision for the workload growth associated with post-decennial processing, as well as the need for interactive accessing, editing, and analyzing large volumes of files.

Decennial data capture (DDC) ($3,001,000). This provides for the continuing maintenance and support of equipment installed to support the data collection activities of the 1990 Decennial Census.

Interactive survey analysis resource (ISAR) ($807,000). This provides for the acquisition of an ISAR system to alleviate the serious deficiencies of large mainframes in meeting the processing needs of the growing number of interactive users. This equipment is designed to facilitate the editing, analysis and summary file processing which is too voluminous and complex for self-contained microcomputers and too intensively interactive for effective processing on mainframes.

Computer assisted interviewing (CAI) ($1,850,000). This provides for the continuing development and production of an automated interviewing system, incorporating laptop computers, and a computer-based telephone operation. It also provides for a facility and equipment for the collection of live survey data on a large scale in a production-like environment. This effort is expected to increase the efficiency of data collection, and to enhance data quality through direct data entry.

1990 DECENNIAL CENSUS PROMOTION

Mr. **Darby**. I think we are going to, while we are changing people, turn on the television and show you some of our promotional efforts the staffs have arranged.

Mr. **Bellomo**. These are seven 30-second clips by the Advertising Council. There are others.

Mr. **Smith**. Have they been on public service on the stations?

Mr. **Bellomo**. Yes, sir.

[Videotape shown.]

Mr. **Smith**. How many languages do you have spots in?

Ms. **Bryant**. For the Spanish ones, we have three dialects. The same words, but spoken by Cubans, Mexican-Americans, and Puerto Ricans.

The Asian one, I believe, is in four languages. We have some of our materials in six languages for these spots.

This is the first time the Ad Council has ever involved minority-owned advertising agencies in doing a public service announcement promotion.

Mr. **Smith**. You just have them in two different dialects and two languages then?

Ms. **Bryant**. Four Asian languages, three dialects in Spanish.

Mr. **Smith**. Oh, I see.

Ms. **Bryant**. Plus English.

Mr. **Smith**. Do you want to proceed with your statement?

PROGRAM HIGHLIGHTS

Mr. **Darby**. Thank you, sir.

We all turn now to the Census Bureau's 1991 budget. The total of the 1991 budget request is $431,337,000. That includes $115.2 million for the salaries and expenses appropriation, and $316.1 million for the periodic censuses and programs appropriation.

STATUS OF 1990 DECENNIAL CENSUS

Before I continue with our explanation of our fiscal year 1991 budget, I would like to briefly describe the status of the 1990 decennial census.

Pre-census activities are complete; we are progressing on schedule. We have opened and equipped seven processing centers, 13 regional census centers, and some 490 district offices.

Through an automated management information system, we were able to closely monitor the cost and the progress of census operations. We have just completed the pre-census phase and local review of the census housing unit counts, which give local officials an opportunity to help us improve our address list.

In addition, we have completed the advance post office check of our address list. In 1980, we were not able to have the post office check any suburban or rural addresses. As a result of these and other operations, we expect to have a very complete address list before the census.

That we are able to have this pre-Census phase at all is due to our highly successful TIGER system, which produces on a timely basis the maps local officials used to conduct their review.

In 1980, we had to cancel the pre-Census local review because of lateness in preparing maps and other geographic materials.

Over 100 million questionnaire packages have been produced and are being shipped to the post offices and Census district offices for delivery. Questionnaire delivery by Census enumerators begins next week in rural areas in the South and Midwest. Census promotion and outreach activities are beginning to build up steam as we approach Census Day.

In late January, the Ad Council distributed Census advertising materials to the appropriate electronic and print media. Separate television ads were produced for the general audience: blacks; Hispanics, separate versions for Mexicans, Puerto Ricans, and Cubans; and Asians, with separate versions for Chinese, Japanese, Koreans, and Vietnamese.

Census Day for the 1990 Census is April 1st, only 32 days away. In fact, we have already begun the census in remote areas of Alaska because of the spring thaw.

On March 20th, we will enumerate selected components of the homeless population living in shelters and on the street. Our mission is to count everyone. And we are undertaking unprecedented efforts to do so.

On March 23rd, over 90 million housing units will receive their questionnaires in the mail.

A major concern is that the recent congressional cuts of $57.6 million from the President's request on top of previous cuts and cost absorptions might compromise our ability to conduct a full and fair census. In particular, we contemplated making the vacant/delete check contingent upon the mail response rate.

However, we have resolved definitely to proceed with the vacant/delete check as originally planned. If the mail return rates substantially exceed that which we have used for our planning base, it will be possible to do so within the currently appropriated amount. Otherwise, we intend to propose a dire emergency supplemental appropriation, with offsetting expenditure reductions, in late April when we shall know the actual mail return rate, and thus the amount of money needed to complete the Census.

We will monitor carefully the mail return rate and keep the committee apprised. Of course, other totally unanticipated setbacks, such as natural calamity, may necessitate a supplemental as well. I understand that supplemental appropriations have been required during past decennial years.

SALARIES AND EXPENSES

Turning to salaries and expenses. Our request for these current statistical programs is $15.3 million more than the post-sequester 1990 appropriation. This includes $5,365,000 in adjustments to base, and $9,978,000 for net program changes. These changes are part of the Presidential initiative to improve economic statistics we discussed before.

The Bureau has an able and dedicated work force which has made substantial contributions to the Nation's statistical system despite budget constraints. However, problems remain in rapidly changing areas of the economy where data and information are urgently needed.

In the current economic statistics activity, we are proposing program changes totaling $7,021,000. Our proposed program increases for FY 1991 will improve the quality of data in a variety of critical areas of the economy, including retail sales, the rapidly changing and growing service sector, emerging growth industries, new and projected investments, manufacturers' shipments, inventories and orders, and foreign trade statistics.

These program increases will also fund improved standard industrial classification (or SIC), coding of new business, research on the SIC system itself, and the Census Bureau's participation with the Office of the Under Secretary for Economic Affairs in the National Trade Data Bank, which was authorized by the Omnibus Trade and Competitiveness Act of 1988.

To address these needs, while recognizing the currently constrained budget situation, we are also proposing reductions in program activities for Current Industrial Reports, the Survey of Plant Capacity Utilization, Government Finance Survey, and elimination of reports on cotton ginning.

In the current demographic statistics activity, net program increases of $3,076,000 will modernize the Current Population Survey (or CPS) processing system. The CPS is used to measure overall unemployment and employment. This is one of the highest priorities of the joint Census Bureau and Bureau of Labor Statistics Conference on the Future of CPS.

The increases also will improve the estimates of personal and family money and non-money income, and use of Government programs collected by the Survey of Income and Program Participation (or SIPP) by increasing the sample size to measure effects on disadvantaged groups and allowing us to examine as well the basic metropolitan statistical area's concept.

The base for population estimates and projections will be reduced.

The fiscal year 1991 budget includes a program decrease of $119,000 in the data systems development subactivity, as well as a base reduction of $131,000.

PERIODIC CENSUSES AND PROGRAMS

Our request for $316,104,000 for the periodic programs is $998,732,000 less than the post-sequester appropriation for 1990. This includes a reduction of $1,011,198,000 for planned cyclical changes, which is primarily due to changes in the decennial census, $11,719,000 for adjustments to base, and a program increase of $747,000.

PERIODIC ECONOMIC STATISTICS PROGRAMS

Turning to the economic statistics programs, again, the request of $29,753,000 provides funding for the second year of the 1992 economic censuses, census of agriculture and census of governments.

The funding will provide for planning and preparatory activities to establish the scope, coverage, content and methodologies that will be employed in the collection, processing and publication of the 1992 censuses.

DECENNIAL CENSUS BUDGET IN 1991

In early fiscal year 1991, we will undertake many activities necessary to meet the goal of delivering apportionment counts to the President by December 31, 1990, as required by law. This will require a budget of $245,789,000 in fiscal year 1991. These activities include questionnaire processing operations, such as edit, filming, keying, computer entry, tabulation, and a second opportunity for local officials to review census housing unit counts. Fiscal year 1991 is the first year that the official results of the 1990 census enumeration will be available to the public. The budget cycle for the 1990 decennial census ends in fiscal year 1993. I mention this because it is important to remember that there are important analysis and data dissemination activities that extend beyond this year's peak activity.

2000 DECENNIAL CENSUS

The decennial census is a highly complex and unique undertaking and we recognize that an immediate start for research and analysis for the 2000 decennial census is necessary. We are requesting $1,531,000, including a program increase of $747,000 to increase our planning efforts for the 2000 decennial census, an effort that we, the GAO, and this committee continue to acknowledge.

OTHER PERIODIC PROGRAMS

We are requesting a combined total of $39,031,000 for periodic programs that provide sample redesign, intercensal demographic estimates, geographic support and data processing systems, programs of ongoing importance that support our Nation's data needs.

Again, Mr. Chairman, I wish to reiterate the importance of the 1991 activities that I have outlined today. In 1991, we will achieve our goals for delivering apportionment counts to the President and redistricting data to the States, improve key economic statistics and begin planning for the 2000 decennial census.

That concludes my statement. Thank you, Mr. Chairman.

[The prepared statement of Dr. Darby follows:]

PREPARED STATEMENT ON BUREAU OF THE CENSUS BUDGET

DR. MICHAEL R. DARBY

UNDER SECRETARY FOR ECONOMIC AFFAIRS

Before the Subcommittee on

Commerce, Justice, State, the Judiciary and Related Agencies

Committee on Appropriations

House

February 28, 1990

Thank you, Mr. Chairman, and members of your committee. I appreciate the opportunity to present and to explain the Census Bureau's 1991 budget.

PROGRAM HIGHLIGHTS

The total of the 1991 budget request is $431,337,000. That includes $115,233,000 for the Salaries and Expenses Appropriation, and $316,104,000 for the Periodic Censuses and Programs Appropriation.

STATUS OF 1990 DECENNIAL CENSUS

Before I continue with an explanation of our FY 1991 budget, I'd like to briefly describe the status of the 1990 Decennial Census. Precensus activities are complete or progressing on schedule.

We have opened and equipped 7 processing centers, 13 regional census centers, and some 490 district offices. Through an automated management information system we are able to closely monitor the cost and progress of census operations.

We have just completed the precensus phase of local review of the census housing unit counts, which gives local officials an opportunity to help us improve our address list. In addition, we have completed the advance Post Office check of our address list. In 1980, we were not able to have the Post Office check any suburban or rural addresses. As a result of these and other operations, we expect to have a very complete address list before the census.

That we were able to have this precensus phase at all is due to our highly successful TIGER System, which produced on a timely basis the maps local officials used to conduct their review. In 1980, we had to cancel the precensus local review because of lateness in preparing maps and other geographic materials.

Over 100 million questionnaire packages have been produced and are being shipped to the post offices and census district offices for delivery. Questionnaire delivery by census enumerators begins next week in rural areas in the South and Midwest.

Census promotion and outreach activities are beginning to build up steam as we approach Census Day. In late January, the Ad Council distributed census advertising materials to the appropriate electronic and print media. Separate television ads were produced for the general audience, Blacks, Hispanics (with separate versions for Mexicans, Puerto Ricans, and Cubans), and Asians (with separate versions for Chinese, Japanese, Koreans, and Vietnamese).

Census Day for the 1990 census -- April 1 -- is now only 32 days away. In fact, we have already begun the census in remote areas of Alaska, before the spring thaw.

On March 20, we will enumerate selected components of the homeless population living in shelters and on the street. Our mission is to count everyone and we are undertaking unprecedented efforts to do so.

On March 23, over 90 million housing units will receive their questionnaires in the mail.

A major concern is that the recent congressional cuts of $57.6 million from the President's request on top of previous cuts and cost absorptions might compromise our ability to conduct a full and fair census. In particular, we contemplated making the vacant/delete check contingent upon the mail response rate.

However, we have resolved definitely to proceed with the vacant/delete check as originally planned. If the mail return rate substantially exceeds that which we have used as our planning base, it will be possible to do so within the currently appropriated amount. Otherwise, we intended to propose a dire emergency supplemental appropriation, with offsetting expenditure reductions, in late April, when we shall know the actual mail return rate and thus the amount of money needed to complete the census. We will monitor carefully the mail return rate and keep the committee apprised. Of course other totally unanticipated set backs, such as a natural calamity, may necessitate a supplemental. I understand that supplemental appropriations have been required during past decennial census years.

SALARIES AND EXPENSES

Our request for current statistical programs is $15,343,000 more than the post sequester 1990 appropriation. This includes $5,365,000 in adjustments to base, and $9,978,000 for net program changes. The changes are part of the Presidential initiative to improve economic statistics. The Bureau has an able and dedicated workforce which has made substantial contributions to the Nation's statistical system despite budget constraints. However, problems remain in rapidly changing areas of the economy where data and information are urgently needed.

In the Current Economic Statistics activity, we are proposing program changes totalling $7,021,000. Our proposed program increases for 1991 will improve the quality of data in a variety of critical areas of the economy, including retail sales, the rapidly changing and growing service sector, emerging growth industries, new and projected investments, manufacturers' shipments, inventories and orders, and foreign trade statistics. These program increases will also fund improved Standard Industrial Classification (SIC) coding of new business, research on the SIC system itself, and the Census Bureau's participation with the office of the Under Secretary for Economic Affairs in the National Trade Data Bank, which is authorized by the Omnibus Trade and Competitiveness Act of 1988. To address these needs while recognizing the currently constrained budget situation, we are also proposing reductions in program activities for Current Industrial Reports, the Survey of Plant Capacity Utilization, Government Finance Survey, and the elimination of reports on Cotton Ginning.

In the Current Demographic Statistics activity, net program increases of $3,076,000 will modernize the Current Population Survey (CPS) processing system. The CPS is used to measure overall employment and unemployment. This is one of the highest priorities of the joint Census Bureau and Bureau of Labor Statistics Conference on the Future of CPS.

The increases also will improve the estimates of personal and family money and non-money income, and use of government programs collected by the Survey of Income and Program Participation (SIPP) by increasing its sample size to measure effects on disadvantaged groups, and allow us to examine the basic metropolitan statistical areas concept. The base for Population Estimates and Projections will be reduced.

The FY 1991 budget includes a program decrease for $119,000 in the Data Systems Development subactivity as well as a base reduction of $131,000.

PERIODIC CENSUSES AND PROGRAMS

Our request for $316,104,000 for periodic programs is $998,732,000 less than the post sequester appropriation for 1990. This includes a reduction of $1,011,198,000 for planned cyclical changes, which is primarily due to changes in the decennial census; $11,719,000 for adjustments to base; and a program increase of $747,000.

ECONOMIC STATISTICS PROGRAMS

The request of $29,753,000 provides funding for the second year of the 1992 Economic Censuses, Census of Agriculture, and Census of Governments.

The funding will provide for planning and preparatory

The principal program beneficiary of advisory and assistance services procured in the periodic censuses and programs appropriation is the Decennial Census, which reaches the peak of its cyclical activity in FY 1990. Advisory and assistance services are particularly needed in the Decennial Census for advice and assistance on outreach and advertising programs to ensure full cooperation with the census, particularly among hard to enumerate minorities, which require specific skills and experience not available in the Bureau; and advice and assistance for the automated data processing equipment which will be used in over 470 temporary field locations, to supplement the current staff in the design, development and deployment of census-specific data capture equipment used in the decennial census. Procurement of advisory and assistance services drops off sharply during FY 1991, the year following the Census Year.

In FY 1990 and FY 1991, the Bureau plans to procure advice and assistance, using the experience and skills of business, academic and other private sector groups, in a number of areas to improve the Economic Censuses: suggestions for improved classification systems, to represent more adequately a changing economy; improved forms design, to reduce non-sampling errors; methods of electronic data collection; and studies on the structural changes, emerging trends, and data needs which will affect planning for the 1997 Economic Censuses.

activities to establish the scope, coverage, content, and methodologies that will be employed in the collection, processing, and publication of the 1992 censuses.

FY 1991 DECENNIAL CENSUS BUDGET

In early FY 1991, we will undertake many activities necessary to meet the goal of delivering apportionment counts to the President by December 31, 1990, as required by law. This will require a budget of $245,789,000 in FY 1991. These activities include questionnaire processing operations such as edit, filming, keying, computer entry, and tabulation; and a second opportunity for local officials to review census housing unit counts. Fiscal Year 1991 is the first year that the official results of the 1990 census enumeration will be available to the public. The budget cycle for the 1990 Decennial Census ends in FY 1993. I mention this because it is important to remember that there are important analysis and data dissemination activities that extend beyond this year's peak activity.

2000 DECENNIAL CENSUS

The decennial census is a highly complex and unique undertaking and we recognize that an immediate start for research and analysis for the 2000 Decennial Census is necessary. We are requesting $1,531,000 including a program increase of $747,000 to increase our planning efforts for the 2000 Decennial Census; an effort that we, the GAO, and this Committee continue to acknowledge.

OTHER PERIODIC PROGRAMS

We are requesting a combined total of $39,031,000 for periodic programs that provide sample redesign, intercensal demographic estimates, geographic support, and data processing systems, programs of ongoing importance that support our nation's data needs.

Again, Mr. Chairman, I wish to reiterate the importance of the 1991 activities that I have outlined today. In 1991 we will achieve our goals for delivering apportionment counts to the President and redistricting data to the states, improve key economic statistics, and begin planning for the 2000 Decennial Census.

That concludes my prepared statement.

Thank you, Mr. Chairman.

1990 SEQUESTRATION

Mr. SMITH. How did you handle the sequester? It was a small amount, I guess, compared to other things, but how did you handle that?

Mr. DARBY. It was taken across the board. There is $8,131,000 in the periodic and $1,398,000 in the ongoing or S&E account, for a total of a little over $9,500,000.

DIRE EMERGENCY SUPPLEMENTAL

In addition, there was a $57,000,000 specific cut that was taken by the decennial and that is the problem that I alluded to in terms of the possible need for a dire emergency supplemental.

Mr. SMITH. And what are you going to offset? Your supplemental, if you have one, will propose an offset?

Mr. DARBY. We would not be able to take it solely within Economic Affairs. I would defer to the people in OMB and the department.

Mr. SMITH. Well, that is probably not going to work. I do not know what they are going to pick out, but the way the rules work around here, if you try to just pick out something in some other department, that is not very easy to do. What happens if you do not get it?

Mr. DARBY. Well, our first hope is that our mail response rate will be high enough that we will not need to come back.

If we do not get the funding, I do not see how we can get the census completed on time.

Mr. SMITH. Is it a matter of time, or will you not do as much follow-up?

Mr. DARBY. Well, the problem is the commitment to count, as the Constitution puts it, the whole number of persons in each State. The major follow-up operations are ways that we know of finding people whom we have missed. So, to delete the vacant/delete check, for example, that involved not counting approximately 2 million people we know how to count and I think that is——

Mr. SMITH. Well, this supplemental is not for that entire amount of money, is it?

Mr. DARBY. We do not know how much we would need until we see the results. Certainly, our hopes are that if we need to come forward with a supplemental, that it would be for a smaller amount. But until April, there are great uncertainties as to how well these ads and the other parts of our outreach program, which are very extensive this time, compared to before, will work.

If the public responds well, if we do as well as we did in 1980, then we do not anticipate needing a supplemental. We expected not to do as well as in 1980 and I think that is a wise and conservative approach. But if that comes true, then I think we will need to find some sources of at least delaying other expenditures to——

VACANT/DELETE OPERATION AND MAIL RESPONSE RATE

Mr. SMITH. Well, let us put it a different way. What is the least important follow-up activity and what does that cost?

Mr. **Darby**. Well, I think that our feeling was that, in terms of things that we could have terminated and left and certainly had any flexibility, it was the vacant/delete recheck and that costs about $60,000,000.

Mr. **Smith**. The what?

Mr. **Darby**. The vacant/delete operation. We go back and find out whether or not houses that were identified as vacant in the initial attempt by enumerators to find people were in fact vacant. We find out that a number of those, in fact, are occupied. We found 1.7 million people in 1980 with this procedure. It is one of the less cost-effective operations.

Mr. **Smith**. What does that cost per-person?

Mr. **Darby**. About $35.

Mr. **Smith**. Are those people, from past experience, concentrated in certain kinds of areas or are they pretty well spread around the country?

Mr. **Darby**. They seem to be disproportionately concentrated in urban and disadvantaged areas. So we are particularly concerned in terms of our commitment to eliminate undercount in those hard to count areas, to not miss the people or——

Mr. **Smith**. Of course, there are some of those areas in every State, but within the State you are saying they are primarily in those areas?

Mr. **Darby**. I think disproportionately and not exclusively.

Mr. **Smith**. And that is $60,000,000?

Mr. **Darby**. Yes, sir.

Mr. **Smith**. Well, you would not be short more than $60,000,000, would you?

Mr. **Darby**. We do not believe so, unless we have a disaster in terms of the mail response rate.

Mr. **Smith**. What if it is $20,000,000 or $30,000,000, what can you do?

Mr. **Darby**. Well, although it is getting later, of course, in the process, and I do not want to speculate beyond what we know about the progress to date, but I think if it turns out that we are near $10,000,000, we can probably rearrange things and move them in time, without major difficulty, and certainly some of that would be done in any case, if we needed to come for a supplemental.

As to exactly how low the mail response rate could go before we needed to find other sources of funding outside of the census, I really do not think we know yet. I think we will know in April. We are just beginning to go into the really expensive part of the census operation and there is a lot of uncertainty.

Ms. **Bryant**. The mail response level, about which we are talking, is somewhere between 70 and 75 percent return by mail, every 1 percent represents $10,000,000, and that is why until we know that mail response, it is hard to get a handle.

Mr. **Smith**. Those that answer by mail, what does it cost per person?

Mr. **Darby**. It saves us about $10 per person, on average, for everyone that answers through the mail or, alternatively, costs us $10 per person for everyone who does not answer through the mail.

Mr. SMITH. But you said these others cost $35.

Ms. BRYANT. They are the last 1 percent of the population we will bring in on the census, and that is essentially the——

Mr. SMITH. Is that a one-step deal, or what is involved in that step that costs $35?

Ms. BRYANT. First of all, they did not respond to the questionnaire. We have sent the enumerator out and the enumerator is supposed to make about four calls on the house and then says it is vacant. The vacant/delete procedure involves sending a different enumerator out, possibly someone more experienced, a few weeks later to check the house again. The experience in 1980 was that 10 percent of those checked households proved to be occupied and we picked up about 1.7 million people, which is the last half a percent of those we bring in.

Mr. SMITH. I wonder how many of those may have moved in after April 1st.

Mr. DARBY. Well, they did check on exactly were they there on April 1st. They may have been away on vacation, for example.

Mr. SMITH. Then, if you try four times, could you not cut that to three or two, or does that save any money?

Mr. DARBY. We do not believe it does.

Ms. BRYANT. Because we are trying to hit different times of the day. These tend to be sort of mobile people who do not stay home much.

Mr. SMITH. I see.

Ms. BRYANT. So, we hit weekends and at night.

Mr. DARBY. And they will be going to other houses in the same block.

Mr. SMITH. Mr. Rogers?

Mr. ROGERS. Are you saying that the first check of that vacant house is made, if they do not respond to mailout questionnaire?

Ms. BRYANT. Assuming most of those households would be in the mail areas. Now, some of them might be in public housing and in some of the public housing units, we are actually having enumerators handle every questionnaire. Essentially, they are ones that we are going back to multiple times to bring in that last half a percent.

Mr. ROGERS. Well, in 1980, the 1.7 million people that you turned up on the vacant/delete count, I am told that 39 percent of them were minority people.

Ms. BRYANT. Yes.

Mr. DARBY. Yes.

Ms. BRYANT. They are disproportionately minority. They are disproportionately in what you might call difficult-to-enumerate urban neighborhoods.

Mr. ROGERS. So, you are telling us you are going to be doing the vacant/delete if your mail returns——

Ms. BRYANT. We are going to do the vacant/delete, we have to do that.

Mr. ROGERS. Regardless?

Ms. BRYANT. Yes.

Mr. ROGERS. Regardless of what the mail percent return is?

Mr. DARBY. Yes, sir.

Mr. Rogers. So, what you are saying is you are going to tell us how much extra you are going to need in April, when you get the mail count back, is that correct?

Mr. Darby. Yes, if we need anything extra, we will tell you in April that we have a problem and we will keep the committee apprised as we begin to get data.

Mr. Rogers. Well, if you do not do the vacant/delete count, it seems to me it might invite some sort of mechanical adjustment to the numbers after the count is done, which I have got a problem with myself, and I suspect others do. So, I would hope that we could do the vacant/delete, do it the right way and get it done with and get it over with.

Mr. Darby. That is our intention, sir. We are committed to that and we, too, believe that it would be inappropriate to omit an activity that is known to have this disproportionate effect on the count.

ADJUSTMENT

Mr. Rogers. Let me switch gears a bit on the adjustment issue. Would you explain how adjustment would work, if it were done?

Mr. Darby. Okay. The proposal for adjustment involves taking a small intense survey, involving somewhat less than 1 percent of the households in the United States that are stratified into different types. So, one stratum might be certain types of urban areas, with high minority and renter populations, for example. Another might be suburban areas. Another would be areas within non-urban, towns in non-urban, and so forth. There are about a hundred of these different types of blocks.

Each block in the United States would be classified and represented by a relatively small number of blocks in this post-enumeration survey. That data, possibly in combination with other information on the age, sex, race makeup of the overall population, would be combined to estimate undercount and overcount rates for different groups of the population in each strata.

For example, suppose that in a town in a non-urban area, a town in Iowa, for example, we found that typically mature women were overcounted. We might find, say, 5 percent overcount, and then under the proposal, for every 20 of these women, we would put a negative woman into a house, sort of above the block, and cancel her out of the count.

Mr. Rogers. I do not know any negative women. [Laughter.]
trying to report it.

On the other hand, say, in urban areas it was found that young black males were undercounted by 5 percent, then for every 20 counted, one would be replicated or cloned and put in this adjusted person's house above the block, because we have to give age, sex and race characteristics for each person. This would be done and all of these adjusted persons, be they positive or negative, would be combined to get an adjusted total of persons.

So, some areas would be given a total with fewer people than actually turned in the census forms, other places would be given an adjusted number with more people than turned in their census forms or were found by enumerators. That in a nutshell is the basis of the adjustment proposal.

Mr. **Rogers**. It is a form of a guess, is it not?

Mr. **Darby**. Well, it is certainly a statistical estimate based upon a modeling procedure, rather than actually counting people.

Mr. **Rogers**. It is a guess.

Mr. **Darby**. That is another name for statistical estimates.

Mr. **Rogers**. Well, would the smaller States have equal representation with the larger States in that kind of adjustment scheme?

Mr. **Darby**. I am not sure—do you mean in terms of the selection for the post-enumeration survey or—let me try the question and see if this is what you were getting at.

We will over-sample the areas that are believed to be particularly hard to count, in terms of the undercount.

Mr. **Rogers**. Irrespective of the size of the State, small or large?

Mr. **Darby**. Well, we will sample blocks based on block characteristics. Now, to the extent that those blocks are in urban areas, with large minority populations, largely renters, and that those urban areas tend to be concentrated in large States, that would lead to over-sampling. There probably is over-sampling of large States, but the sampling is not done by State, because, for example, if there were in Kentucky such a block or a series of blocks with these same block characteristics, it might be included in the sample for that stratum or the block might be represented by New York or Chicago or Los Angeles or other blocks that are classed by the statisticians in the Census Bureau as having those same characteristics.

Ms. **Bryant**. There are 5,000 blocks in the post-enumeration survey. Each of them has one of 101 characteristics or what he referred to as stratums. Every block in the country will be tagged as one of those 101 types, and based on what happens in the ones in the sample, then, is how you adjust all blocks of that type across the country. So, every county, every block would be included in the adjustment, some would go up, some would go down, and many would stay the same.

Mr. **Kolbe**. Would the gentleman yield for a question?

Mr. **Rogers**. I yield.

Mr. **Kolbe**. Have the blocks in the post-enumeration study been identified now?

Ms. **Bryant**. They have and that sample is under lock and key, so that there is no way those who are working on the decennial would know that this is one of the blocks that is going to be checked.

Mr. **Rogers**. You would use the post-enumeration survey method of making the adjustment, correct?

Mr. **Darby**. Well let me qualify that in two ways. One, we have agreed that the Secretary will decide by July 15, 1991, whether or not to make an adjustment, so we certainly have not agreed to——

Mr. **Rogers**. I say if you do the adjustment, it will be by the PES method, right?

Mr. **Darby**. Well, the PES would be an input. Now, it may be that it is necessary, in order to improve the accuracy of that method, to combine that with demographic analysis, as it is called, to limit implausible age, sex, race ratios that might be implied by the PES, which, after all, is a less than 1 percent sample.

So, I think it is fair to say that the methodology is not completely worked out yet. The Census Bureau is completing that and, of course, we will have to have the exact methodology worked out by this summer, but we are not there yet. We are not exactly sure what are the criteria. We have agreed to publish next month the criteria; they are technically known as guidelines.

FUNDING FOR ADJUSTMENT

Mr. **Rogers**. Are there any monies in your request for a post-enumeration survey?

Mr. **Darby**. They were in the fiscal year 1990, yes, but not for an adjustment purpose. We agreed to do what we had always planned to do, that is, an evaluation post-enumeration survey.

Mr. **Rogers**. What I want to know is do you have any money in this request for an adjustment to the numbers that turn up in the census.

Mr. **Darby**. No, sir.

Mr. **Rogers**. Therefore, you would not be able to do the adjustment, unless you came back for a supplemental?

Mr. **Darby**. Well, I guess I misspoke, in the sense that the cost is so small that we have not identified any specific dollars. The intention was, if the Secretary decided to do the adjustment, to use the funds in the base, but we have not requested specific funding for an adjustment. Certainly, Bureau appropriated funds were intended to be used.

Ms. **Bryant**. Post-enumeration surveys——

Mr. **Rogers**. I am sorry, what was the last part of your statement?

Mr. **Darby**. We certainly anticipated using appropriated funds in fiscal year 1991 to do an adjustment, if the Secretary had decided or were to decide to do so.

Mr. **Rogers**. When will he make that decision?

Mr. **Darby**. On or before July 15, 1991. The data must be published no later than July 15, 1991, if he were to decide to adjust. If he decides not to adjust, he is committed to explaining his reasons for that decision and how they relate to these guidelines we will be publishing next month in final form, the criteria that should be used in making such a decision.

STATISTICAL IMPUTATION

Mr. **Rogers**. Has a statistical inference ever been used to construct the census numbers?

Mr. **Darby**. I do not believe it is fair to say that a statistical inference has been used. There are imputations, but those are based upon actual evidence, rather than inference from a model. This would be a model based inference in which we would not be able to provide an auditor, if you will, with evidence that people were actually there where we said they were. They would only be able to test the assumptions of the model.

In the past, we have done imputations. For example, in the 1980 Census, we imputed data for approximately 3.5 million people. For 2.75 million of those, we did not have all of their characteristics, age, sex, race. As a matter of fact, we did not even have more than one characteristic.. Those characteristics were imputed by what the people living in their neighborhood seemed to be.

For another three-quarters of a million people, we had physical evidence that the house was actually occupied, but we were never able to find by reliable witness how many people lived there and what they were like. For those places where we had reliable evidence that the house was occupied, although we did not know by whom, we followed an imputation method. So, in that sense I think that is a rather different procedure than is contemplated in the adjustment.

Mr. ROGERS. Well, if the Secretary decides to do an adjustment, would you be required to seek to reprogram funds for that purpose?

Mr. DARBY. No, sir.

Mr. ROGERS. That is all.

Mr. SMITH. Mr. Kolbe?

ADJUSTMENT

Mr. KOLBE. Mr. Chairman, I am going to follow up on some of the questions Mr. Rogers asked on the question on the statistical adjustment.

You said that the blocks that are going to be used in the—what is the word I want?

Ms. BRYANT. Post-enumeration survey, they call it.

Mr. KOLBE. Have those blocks been selected already?

Ms. BRYANT. Yes, they have. And the addresses on them have been identified. A different set of census enumerators was sent out to do an address listing on those. Those maps are, in a sense, locked up and will not be used again until this survey occurs after the census.

Mr. KOLBE. Well, what was your reference to the security; that they are under lock and key? I do not understand. They are identified. They are known.

Ms. BRYANT. Only to individuals one at a time, only to a few people, not including me or Mr. Darby; the reason being that a post-enumeration survey is supposed to be an independent evaluation of the census. We would not want interviewers doing their own follow up to do a better job than normal in specified blocks. Therefore, the post-enumeration survey is an independent evaluation survey.

Mr. KOLBE. But it was necessary for what reason to do that selection now beforehand? There are a lot of people, I will tell you, who flatly believe that there are people out there that know exactly where the post-enumeration study blocks are going to be, and that they intend to try to skew the initial census on that basis.

Ms. BRYANT. The enumerators who listed addresses, of course, are under Title 13 confidentiality—five years in jail, $5,000 fine if they reveal the blocks. No one enumerator would know all—an enumerator would have listed one or two blocks. The reason they were done early is just the whole process of putting together a survey which will follow immediately in June and July after the census. We did not want that work going on at the time of the census.

Mr. KOLBE. When does the post-enumeration study happen?

Ms. **Bryant**. Well the actual field work will be in June and July.

Mr. **Kolbe**. Of this year?

Ms. **Bryant**. Yes.

Mr. **Kolbe**. But then the decision about whether or not to use that would not be made for a year and——

Ms. **Bryant**. Well, it takes that long to do all the analysis.

Mr. **Kolbe**. On the initial census and the post-enumeration?

Ms. **Bryant**. Yes.

Mr. **Darby**. Yes.

Mr. **Kolbe**. So these will go on separate tracks. The decision will be made whether to overlay that information in August of 1991?

Ms. **Bryant**. No.

Mr. **Darby**. By July 15.

Ms. **Bryant**. By July, so that means——

Mr. **Kolbe**. July of 1990?

Ms. **Bryant**. No, July 1991. So that means the analysis would be going on in the winter of '90 and spring of '91.

Mr. **Kolbe**. So the data that it is delivered to the States in April of 1991 will be not valid then?

Ms. **Bryant**. It will be the count as enumerated.

Mr. **Kolbe**. In the census?

Ms. **Bryant**. Yes.

Mr. **Kolbe**. Right. If it was determined that a post-enumeration analysis or study should be used for statistical adjustment, then new enumeration data would be delivered to the State at what point?

Mr. **Darby**. Well it would be new population counts, because we will not be re-enumerating.

Mr. **Kolbe**. New population data, block by block, correct?

Mr. **Darby**. That is correct.

Mr. **Kolbe**. That would be delivered at what time?

Mr. **Darby**. On or before July 15th. Given the great difficulty, and this is something that I should speak to, the great difficulty in meeting that date, it would be very unlikely that we could deliver it much before July 15th.

When we were settling the lawsuit that resulted in the stipulation that we have been basically discussing here, the decision by July 15th, there was discussion on when should the decision be made? We advised the plaintiffs that it would probably not be until September that we could assuredly have the analysis done necessary to have a chance to make a positive decision.

And we advised them that by July 15th, we had a 50/50 chance of completing the analysis. For reasons presumably out of concerns about their redistricting, they chose the earlier date, even though it made it less likely that a favorable decision could be made.

REDISTRICTING

Mr. **Kolbe**. How are decisions about redistricting in States that have relatively early primaries and early filing deadlines supposed to be made if the new data is not given to them by July 15th, let's say, of 1991? How is a State supposed to accomplish the redistricting?

Mr. **Darby**. That is a difficult question. And originally, I think part of the reason that the majority of the professional staff at the census opposed the adjustment proposal had to do ~~with these~~ kinds of feasibilities; that the States really needed the data by April at the latest for redistricting.

The Federal judge in the case we have been discussing indicated that he believed those deadlines should not be viewed as binding, and we were required to more or less abstract from them. I think that it would be a concern—certainly in making the policy decision of whether or not to adjust—whether or not we would disrupt the redistricting and reapportionment procedure.

Mr. **Kolbe**. Well I would hope there would have been maybe some other reasons that professionals at the Bureau would have opposed it.

Mr. **Darby**. Oh, there certainly were.

Mr. **Kolbe**. That is, that there is no shred of evidence in any literature on a theoretical or philosophical basis that a statistical adjustment can give you a more accurate count.

Mr. **Darby**. Well I must confess that I think that is a controversial issue. There are some statisticians who believe very strongly that it can improve the accuracy. There are others who believe equally strongly that it will not.

VALIDITY OF DATA

Mr. **Kolbe**. Do you think it improves the validity of the data for the business person who is buying this data to use? I mean, are they going to know where the fake houses are, the fake people are, as opposed to the real people?

Mr. **Darby**. Well they will know where the adjusted persons are. We would be reporting that so they could take them out if they chose to.

Mr. **Kolbe**. Oh, they will be able to take the——

Mr. **Darby**. And of course, the plan is to report the actual enumeration in any case.

Mr. **Kolbe**. Side by side.

Mr. **Darby**. So they will already have the enumerated data, if that is what they prefer, if the decision were made to adjust. But presumably, if it increases the accuracy of the census, and I do not think that this adjustment decision could be made positively unless there was clear and convincing evidence that we were making things better, then presumably the business buyers would want the adjustment.

If we do not have that evidence, then I do not anticipate that they would be faced with the problem.

Mr. **Kolbe**. Well, I would just say that I find it distressing that the Census Bureau was willing to concede so easily on this point in the consent decree. I find it—as my colleague Mr. Rogers does—very troubling that we are going to do something with the census that I think fundamentally undermines the credibility and validity of the census.

I have long contended that the census ought to be a count, the very best count we can get, of everybody who is there. And for that reason, I would disagree with my colleague on the issue of the illegal aliens, about which I have a question here. But to start playing these kinds of games with the data, I think is absolutely the most damaging thing we could possibly do to the census.

Mr. **Darby**. Sir, if I may respond to that briefly. I think that the Secretary has agreed to reopen that decision, which was made in 1987 by the previous administration, and to reexamine it with a fresh mind. He has not agreed to make a particular decision one way or another, and I think he has retained an open mind today.

Now I think that the belief in the Census Bureau and the belief in the Commerce Department is that the most important thing in 1990 was to be allowed to continue with the census, which was proceeding according to well-founded plans. We were at considerable risk that the Federal judge would prevent us from either taking the census or doing the follow-up operations necessary to take a full and fair census.

There was a proposal from the plaintiffs asking him to order us not to do the follow-up operations and to rely solely on the post-enumeration survey, so as to get counts, adjusted counts, out by April 1. We felt that the Nation would be better served if the traditional census was taken in the best possible way in 1990, and the decision on whether or not to adjust were deferred to 1991.

If we fulfill our goal to take the best possible census in 1990, it will be technically impossible to improve on those counts. Only to the extent we do not do a good job on the census in 1990, resulting in an under-count problem, will we be faced with a hard decision in 1991.

So that was the reasoning. I agree that it was a hard choice.

Mr. **Kolbe**. I understand the gun you were under; but I am just here to predict that if we use a statistical adjustment, we will have chaos in redistricting from the courthouse to the U.S. Capitol, not just in 1992 but through the entire decade. It will just be chaotic.

IMMIGRATION AND NATURALIZATION SERVICE POLICIES

Let me, if I might, turn to the other subject very quickly. One of the real concerns we have had has been the actions of the Immigration and Naturalization Service in conducting raids during the decennial census. During the 1980 census, the INS adopted policies to suspend those raids and other high publicity activities, regardless of whether or not they caught anybody who was illegal, and people who are illegal should be caught and deported.

The perception is that when a raid follows a count, there is some connection between those, and I am sure you share that concern. Can you tell me if there has been a similar policy adopted for 1990? My understanding is there is not, but I would like to know.

Mr. **Darby**. We have been told that residential block sweeps were discontinued in 1980 and remain discontinued now. We have spoken to the INS; the previous Census Bureau director met with the INS. And we have continued to try and make them aware of our concerns. I understand that another committee had a hearing this morning to discuss these matters.

Ms. **Bryant**. The INS has just issued guidelines to all of its offices.

Mr. **Kolbe**. You have seen those guidelines?

Ms. **Bryant**. Yes. The guidelines do three things for the census. First of all, they reinforce that the residential sweeps that were discontinued in 1980 remain discontinued. Second, they put a moratorium on enforcement publicity between February and May. And third, they ask all of their people to be sensitive about the importance of taking a full census count.

Now the INS has its mission, and obviously it is not going to back off on it completely. So they will continue their employer enforcement, which apparently is the major modus operandi now. But they have conceded and issued these three guidelines on the policy for the census.

Mr. **Kolbe**. Do you view the substance of these guidelines as satisfactory, or had you hoped for more?

Mr. **Darby**. We are always hopeful that the INS will move with care and discretion, and we remain hopeful.

Mr. **Kolbe**. That sounds like a politician talking.

Mr. **Darby**. I thought I was a professor.

Mr. **Kolbe**. For somebody who is a professor, you sound like a pretty good politician. [Laughter.]

I am not sure I understood exactly whether———

Mr. **Rogers**. Will you yield?

Mr. **Kolbe**. I absolutely yield.

Mr. **Rogers**. Have you ever heard an economist equivocate like that?

Mr. **Kolbe**. No, I have not.

I will read into that what I choose, I guess, in terms of that answer.

Mr. Chairman, I have no further questions.

COTTON GINNING

Mr. **Smith**. You mentioned something about discontinuing the statistics program on cotton ginning?

Mr. **Darby**. Yes, sir.

Mr. **Smith**. Is not that required by law?

Mr. **Darby**. We are proposing alterations. We are proposing, part of this proposal, we also come forward with a proposal to amend———

Mr. **Smith**. Both are to repeal the law—to take that out?

Mr. **Darby**. Yes, amend Title 13, yes, sir.

Mr. **Smith**. Well, what is the timetable? What if it is not repealed by that time? The law says you have to go ahead.

Mr. **Bellomo**. I am not a lawyer, sir. But, we do have other provisions in Title 13, such as the mid-decade census, which says the Secretary shall perform the activity. But we do not have funds for that either. So I am not sure that it is necessary to repeal the law.

Mr. **Smith**. What are these others?

Mr. **Bellomo**. The mid-decade census is one for sure.

Mr. **Smith**. Well, that is not a constitutionally required census, though.

Mr. **Bellomo**. No, sir, it is not. But it is under Title 13, as is cotton ginning.

Mr. **Smith**. I see, okay.

Mr. **Bellomo**. It is the same title.

Mr. Smith. Yes, both of them would be.

Mr. Kolbe. Mr. Chairman, would you yield?

Mr. Smith. Yes.

Mr. Kolbe. This is new to me. I did not understand. Why are you proposing to discontinue this?

Mr. Darby. We recognize that money is very tight, and there is a great pressure on funds, and we are trying to improve the higher priority——

Mr. Kolbe. Let me interrupt you. Is this the only agricultural statistic you are——

Mr. Darby. This is about the only agricultural statistics, other than the agricultural census, still maintained by the Census Bureau. Most agricultural census or agricultural statistics are produced by the Department of Agriculture.

Mr. Kolbe. Is it duplicative of what is done by the Department of Agriculture or not? In other words, are we just abandoning this altogether? There will be no cotton statistics, is that correct?

Mr. Darby. Well no, we would still have cotton statistics in the agriculture census—this is on how many bales are ginned at cotton gins.

Mr. Kolbe. Why in the world is that done by the Census Bureau as opposed to the Department of Agriculture? Is this the only agricultural statistic that you maintain?

Ms. Bryant. No, we do the every five year agriculture census.

Mr. Darby. But other than that——

Mr. Kolbe. This is on a yearly basis?

Mr. Darby. Yes.

Mr. Kolbe. And normally those yearly statistics——

Mr. Darby. Are done by Agriculture.

Mr. Kolbe. Meat production, so forth, is done by——

Ms. Bryant. Agriculture.

Mr. Darby. Apparently it is a historical accident that is still with us instead of them.

Mr. Kolbe. Have you had discussions with the Department of Agriculture about them picking up this responsibility? I would think cotton ginning statistics would be fairly important, the number of bales.

Mr. Darby. They are aware that we are proposing to discontinue it. I presume that they would take appropriate action within their budget total.

Mr. Kolbe. You might want to check on that. I am not an expert on this, but I do have a lot of cotton production in my district, and I would assume that ginning statistics on bales of cotton would be vital to commodities markets.

Mr. Darby. I believe that there are separate crop data that serve their purpose—this is on exactly where it gets ginned.

Mr. Kolbe. Where does it get ginned? All right, thank you very much, Mr. Chairman.

1992 CENSUS OF AGRICULTURE

Mr. Smith. What is the timetable now on the next agricultural census?

Mr. Darby. That would be 1992.

Ms. Bryant. It will be 1992. The reports on the 1987 one are now out.

Mr. Smith. What is the timetable for preparing for it and so forth?

Ms. Bryant. The economic censuses are on a six-year budgeting cycle. This is year two. So all of the planning is in this budget.

Mr. Smith. The planning money is in this budget?

Ms. Bryant. Yes.

Mr. Smith. And then what will be in next year's budget?

Ms. Bryant. Well I mean, it is sort of a build-up until you actually take it in 1992.

Mr. Smith. In 1992.

Ms. Bryant. So this is the second year of the six-year cycle on both the economic and agriculture censuses.

Mr. Smith. What have you done to be sure this one is more accurate than previous ones? Have you made any changes?

Ms. Bryant. Well that is, of course, what planning money is for. I mean, we are just really in the early stages now of planning for '92; so the funds that are in this budget would be—the census always is rather research-driven. But after each type of census, we do evaluation and try to improve the next one. And that would be occurring in agriculture and business, as well as, what we are trying to do in the 1990 census compared to what we did in the 1980 census.

Mr. Smith. This is the one that we have had a lot of complaints about, this agricultural census. You may or may not know—how long have you been with the Census Bureau?

Ms. Bryant. I was appointed by President Bush on December 7th. I was down there as a consultant for several months before that.

Mr. Smith. Well I think it was in the 1972 census that—was there an agricultural census in '72?

Ms. Bryant. Yes—in years ending in 2 and 7.

Mr. Smith. They missed seven million head of cattle.

Ms. Bryant. May I call on my deputy to——

Mr. Smith. Yes.

Mr. Kincannon. The spare team is here in case——[Laughter.]

As I recall, this is an occasional dialogue. And there was a discrepancy covering the 1972 census between figures from the Census Bureau and another source, a State source, I believe. I do not recall without going back to that. And I believe, in fact, that we were able to demonstrate that our figures were substantially correct and the other figures were either by definition different or omitted some class that we had included or included some class that we had excluded.

And I would be glad to submit that information to you.

[The information follows:]

Undercount of Cattle

The issue of the "missed cattle" was first raised in the House Subcommittee on Census and Population hearings on June 22 and 23, 1976. The hearings were held for presentation of testimony concerning proposed legislation (H.R. 12397) which would give responsibility for the conduct of agriculture censuses to the Statistical Reporting Service (SRS) of the Department of Agriculture (USDA).

Congressman Neal Smith (Iowa) stated in his testimony in support of the proposed legislation that "according to an analysis made by the Office of Technology Assessment by Harry C. Trelogan, former head of the Statistical Reporting Service of the USDA, the 1969 census failed to count about 8.5 million head of cattle located on 290,000 farms." The number of cattle missed was estimated to be 5.8 million (5.2 percent), not 8.5 million. It is not known how the apparent transposition error occurred.

The 1969 Census of Agriculture showed 106.3 million cattle reported on farms as of December 31, 1969. Based on the coverage evaluation study conducted by the Bureau as part of the 1969 census, the total inventory should have been 112.2 million—an estimated undercount of 5.8 million cattle. The cattle missed in the census were on farms not counted due to incomplete mail lists. The USDA's estimate for January 1, 1970 was 112.3 million.

Congressman Smith's remark concerning the missed cattle was one of several congressional criticisms concerning coverage of mail-out censuses. These criticisms ultimately led to the inclusion of an area sample survey in the 1978 Census of Agriculture to supplement the mail list and to improve coverage of farms.

Mr. SMITH. Well, as I understand, the farmers thought that you were wrong. They made the wrong plans based on your statistics. Are you really, on this agricultural census, trying to take past history and improve?

Ms. BRYANT. Would you like us to prepare a position paper for you on that?

Mr. SMITH. I think you should, because if they are not better than they had been in the past, I think we would be better off to give it to a scientific sampler; I really do.

Ms. BRYANT. Let me get information back to you on how we are interpreting that.

Mr. SMITH. Yes.

Mr. KINCANNON. We will certainly do that. But I would like to comment that the level of complaints from farmers about the 1987 census was substantially lower than the level of complaints about the 1982. We did make some progress in that area.

[Additional information follows:]

QUALITY AND TIMELINESS IMPROVEMENTS IN THE CENSUS OF AGRICULTURE SINCE 1974

As the chart shows, the timeliness of the census publications has improved dramatically since the 1974 Census of Agriculture. The data are now released more than a year sooner than in 1974.

MONTHS FROM START OF DATA COLLECTION TO PUBLICATION OF STATE BOOKS

Census Year	First	Last
1974	28	33
1987	13	20

Quality improvements, although harder to measure and objectively express, have also been made. Notable improvements in several areas include:

RESPONSE BURDEN

Constituent letters from the Congress were cut in half from 1982 to 1987 and were only about 5 percent of the letters received in 1974.

Form length was cut from a standard 20-page booklet in 1974 to a standard 4-page, easy-to-use form in 1987. Some farm operators received only a 2-page form in 1987.

Through the use of sampling, only about 20 percent of the farm operators received the census long form. No sampling was used in 1974.

Census contacts with the mail list universe were cut from 6.5 million in 1982 to 4.1 million in 1987.

AUTOMATION

Interactive computer editing and problem resolution of census forms.

Interactive computer review and research of state and county totals.

Interactive computer searching of name and address matches.

STATISTICAL METHODOLOGY

Mail List Development—Used a precensus identification survey to eliminate nonfarms and duplicates from the 1978 and 1982 mail lists. Modeled mail list variables that predicted the probability of farm status and thus used an objective methodology for the elimination of nonfarms from the census lists in lieu of the precensus identification survey.

Conducted a pilot project using state lists of farms to improve coverage of small and specialty operations. Expanded list enhancement program of incorporating specialty lists from cooperatives, contractors, poultry producers, citrus growers, etc.

Conducted methodological research into computerized matching for mail list unduplication.

Data Collection Research—Tested mail out procedures and materials. Increased precensus testing of form design and content, including extensive work and communication with farmers.

Research into methods for increasing early response to the census resulted in 1987 response being nearly 17 percentage points ahead, at one point, of the 1982 response pattern.

Sample Design and Estimation—Improved sample and nonresponse weighting procedures resulting in reductions in variability of estimates.

Provided estimates of sampling error for many more data items in census publications.

Coverage Improvement and Evaluation—Conducted area sample in 1978 to dramatically improve the coverage of all farms, especially small farms.

In lieu of unfunded area sample in 1987, provided state-level coverage evaluation estimates of farms not on the mail list with the state publication as opposed to regional-level estimates in the less timely coverage evaluation report.

OUTREACH AND DISSEMINATION

Leading edge research into data dissemination via electronic modes such as CD-ROM and bulletin boards.

Early release of limited final data rather than preliminary data subject to change.

Use of regionalized forms which better focus the respondent on the crops that are specific to his/her region.

PUBLICATIONS AND DATA

Improved presentation of data through new publications such as Government Payments and Market Value of Agricultural Products Sold, ZIP Code Tabulations, and Agricultural Atlas of the United States.

Refocusing of data collection effforts in the area of irrigation by eliminating data from irrigation organizations and using the resources to collect more data on irrigation practices used by farm operators.

Mr. **Smith**. Yes, thank you.

Are there any more questions?

Mr. **Rogers**. No.

Mr. **Smith**. Thank you all for being here.

Mr. **Darby**. Thank you very much, Mr. Chairman.

[The following questions were submitted to be answered for the record:]

Questions Submitted by Congressman Smith

1990 Census

Vacant/Delete Check

QUESTION:

If the mail response rate is not better than anticipated and the Department is unable to obtain the emergency supplemental appropriation, how will you be able to do the vacant/delete check?

ANSWER:

If the mail return rate is not better than anticipated, and there are insufficient cost savings in other areas, we would conduct the vacant/delete check and then continue only vital census operations until the end of FY 1990. Effectively, we would close down all operations except those related to producing apportionment and redistricting counts, protecting facilities and materials, and conducting the Post Enumeration Survey.

QUESTION:

How much could be saved if the Bureau did the vacant/delete check on a sample basis, as was done in the 1970 Census?

a. What would be the consequences of doing a sample?

b. Would such a sampling be permissible under current law?

ANSWER:

a. We will conduct the vacant/delete check on a 100-percent basis originally planned in order to provide accurate counts and data for small geographic areas. One of the unique characteristics of a census, as opposed to a sample survey, is that a census is designed to produce accurate data for small areas. The majority of the 39,000 governmental units in the U.S. are small: about 80 percent have fewer than 5,000 people. By conducting this recheck on a 100 percent basis we will be providing data with a level of accuracy consistent with other census data collection activities, and consistent with our goal to improve accuracy for geographic areas and population subgroups.

b. The Department has in the past had legal concerns about conducting the vacant/delete check on a sample basis. In 1970, a sample vacant/delete check was adopted as an emergency measure. In 1980, a full vacant/delete check was conducted. The decision to undertake a full check in 1980 was based in part on the recognition that sampling appeared to be inconsistent with Section 195 of United States Code Title 13. Nonetheless, the decision to conduct a full check in the 1990 Census was based on the considerations outlined above.

Counting Americans Overseas

QUESTION:

What is the cost of counting overseas members of the armed forces, civilian DoD employees, and their dependents in the 1990 population counts used for apportionment?

ANSWER:

We are planning, for the purposes of Congressional apportionment, to include overseas U.S. military and Federal civilian personnel and their dependents stationed with them. A total cost estimate is not available because most information will be gathered from administrative records and all work will be absorbed by the reporting departments and agencies. Work required at the Census Bureau will be carried out by existing staff.

QUESTION:

Is the cost of this item funded in the Bureau's appropriation or in DoD appropriations?

ANSWER:

The cost of incorporating data provided by the agencies into the apportionment counts is minimal, and is included in the Census Bureau's appropriation. The cost of providing these data would be funded by the DoD or other agencies providing the information.

QUESTION:

Why aren't you counting other citizens residing abroad for the purpose of apportionment?

ANSWER:

In response to widespread bipartisan congressional support, we decided to include Federal overseas personnel, both military and civilian, and their dependents, in the 1990 counts used for apportionment. We took similar action in the 1970 census when the Congress expressed interest in including in the apportionment counts the unprecedentedly large number of Americans living abroad. Many of these persons consider the U. S. to be their usual place of residence.

In addition, inclusion of Federal overseas personnel is possible because of the ease with which we can acquire information from Federal administrative records. These records officially document the existence of such persons, and record a state of residence for them. Equivalent information for other Americans overseas, who are private citizens, that would allow us to include them in the apportionment count, is not available, even for those employed by U.S. companies, and such information would be difficult to collect accurately.

Post-Enumeration Survey

QUESTION:

What were the terms of the Settlement Agreement with the State of New York in its suit to produce adjusted population counts?

ANSWER:

We have attached a copy of the Settlement Agreement.

QUESTION:

You are requesting $32.4 million in FY 1991 for statistical research and evaluation. How much of this amount will be allocated to the Post-Enumeration Survey and other efforts needed to made a decision on adjusting the counts from the 1990 Census?

ANSWER:

$20 million is included for the implementation of the Post Enumeration Survey.

QUESTION:

Would the Bureau reduce its efforts on coverage evaluation if the Department decides not to adjust the counts?

ANSWER:

No, we would not reduce coverage evaluation efforts.

QUESTION:

How much do you estimate will be saved from following up on only one in ten mail return short forms that fail edit for content purposes and by eliminating editing of questionnaires obtained by enumerators?

ANSWER:

The changes made to our questionnaire edit follow-up plans save a total of about $36 million.

QUESTION:

Will these actions impair a possible adjustment of Census counts?

ANSWER:

No.

Use of Automation

QUESTION:

In your justifications you state that one of the major improvements for the 1990 Census has been the increased use of automation. What action have you taken to insure the reliability of the information in your management information system?

ANSWER:

Completeness, validity, consistency, and reasonableness checks are an integral part of the capture of Management Information System (MIS) cost and progress data. In the district offices (DOs), the Payroll Form 308 is the daily record of worker progress and hours worked. These forms are manually reviewed before keying, and 100 percent verification is performed on the keying of the data into the computer. The computer checks for invalid entries or employee identification numbers as the data are entered. After the data are transmitted to the Regional

Census Centers (RCCs), computers perform further edits for consistency and tolerance tests to determine if the data are within expected ranges for specific types of job categories and expected production rates by operation. RCC managers review reports produced and if any data are missing or seem suspect the transmitting DO is contacted and asked to recreate and retransmit the data.

In the processing offices (POs), all progress and production rate data for keying operations are automatically calculated by computer as the Computer Assisted Tracking System (CATS) accumulates information on-line as the operation is ongoing. For clerical processing operations, all batches of forms coming into or going out of various work units are tracked by entering the batch number into a computer terminal at that work unit. So at any point in time CATS can pinpoint the location of a batch of forms and can provide accurate up-to-date reports on the progress of any operation.

For cost information in the POs, estimates are produced by computer for each operation weekly based on the number of hires working at various types of jobs during a given week. The current number of hires on board are part of the Personnel and Administrative Management System (PAMS), which are keyed from personnel forms after the forms have been clerically reviewed, and the keying is verified for accuracy. An internal audit of the payroll information is conducted and the information is verified against authorized position titles and operation codes.

When data are transmitted from the RCCs and POs over high speed data lines, any transmission errors that may occur are automatically detected by electronic line monitors that acknowledge the loss of a block of data, and that block of data is automatically retransmitted. At headquarters, software in the MIS edits all the transmissions to determine that the correct identification codes by office site are in place and recalculation of totals and percents in reports are performed to verify that the data received in the MIS data base are the same data that were transmitted from the field offices.

Teams of analysts at headquarters study each updated report looking for anomalies in cumulative progress or cost in an operation from one day to the next, or looking for offices not reporting. When data do not look reasonable, inquiries are made to the managers of the offices that transmitted the data for resolution.

QUESTION:

Does your management information system have enough capacity to process all the data required on time?

ANSWER:

All field office and processing office computers have been sized based on dress rehearsal experience to accommodate the necessary processing and transmission of MIS cost and progress data, as well as payroll and recruitment data at specified time intervals, whether it be weekly or daily. At headquarters we currently have sufficient capacity, and backup capacity in case of hardware failure or disaster, to produce the required management reports to control peak census activities.

QUESTION:

Will the Bureau need to purchase additional capacity or borrow it from other agencies, and if so, at what cost?

ANSWER:

Recently the Bureau brought on line an offsite processing facility in Charlotte, NC, which will serve, in part, as backup capacity to the decennial for both UNISYS and DEC computer processing. The Charlotte facility will also be used for production of geographic products and other geographic processing activities in support of the decennial census. In addition, the decennial applicant name check system and the internal decennial budget formulation system were recently relocated from the headquarters computing facility to the BETA Test Site facility in Baltimore, where there is available capacity. This move prepares the headquarters computers to receive and process the peak MIS data in a timely manner.

Unemployment Benefits

QUESTION:

You are requesting $4.4 million for unemployment benefits for FY 1991; for FY 1990 you requested about $71.5 million for unemployment benefits. What is the reason for this major difference in the cost of this item for FY 1991?

ANSWER:

We budgeted for unemployment compensation claims that will be filed by the large temporary work force hired in FY 1990 to conduct the 1990 Census enumeration. The decrease reflects the 96 percent decrease in temporary staff between FY 1990 and FY 1991, as a result of completing the majority of field enumeration activities in FY 1990.

QUESTION:

Won't a significant number of temporary workers receive unemployment benefits in FY 1991?

ANSWER:

It is difficult to predict precisely when census workers will receive unemployment benefits. However, the peak census staff of 285,000 workers occurs in May 1990, and the Census Bureau would be liable for a large number of claims at the time these workers are released. Our budget estimates are based on anticipated peak staff levels and the percentage of staff expected to apply for and receive benefits based on national averages and some limited historical information from the 1980 census and 1990 test censuses. This information and methodology lead us to budget most of the unemployment compensation costs in FY 1990.

Promotion and Outreach

QUESTION:

What portion of the $5.3 million requested in FY 1991 for promotion and outreach will be allocated to the Census Community Awareness Program?

ANSWER:

$2.9 million is for the Census Community Awareness and Products Program.

QUESTION:

How many community awareness specialists will be retained during FY 1991?

ANSWER:

We plan to have 105 community awareness specialists in FY 1991 to complete the following activities:

- Contacting community-based organizations to thank them for their assistance during the 1990 census;
- Conducting data work shops for community-based organizations, religious organizations and schools;
- Attending meetings and conferences and responding to inquiries regarding access to and use of census data products, the schedule for release of 1990 census products, and the like;
- Assisting regional geographers with redistricting issues.

QUESTION:

What other kinds of activities will be funded under Promotion and Outreach?

ANSWER:

In addition to the activities described above, the Census Bureau will complete evaluation of its 1990 School Project; complete the "Thank You America" campaign to acknowledge those parties outside the Bureau who provided support for the 1990 census; and participate in workshops, conferences and other forums to inform and assist the public in accessing and using various data products at the national and local levels.

Salaries and Expenses

Foreign Trade Statistics

QUESTION:

You are requesting an increase of $500,000 and 13 positions to improve foreign trade statistics. The justification for this request is a suspicion that a significant undercount of exports exists and that there is a need for a program to improve the quality of foreign trade data. What is the magnitude of the suspected undercount?

ANSWER:

Based on initial audits of export operations at four major airports we estimate the value of export shipments by air missed in 1988 to be in the range of 5-10%, approximately $5 to $9 billion.

For 1988, if we assume the same export shipment ratio for the remainder of the export trade (i.e. for vessel shipments and for truck/rail shipments to Mexico), then the additional undercount could be in the range of $12 to $25 billion. The trade deficit for 1988 could then be less than $100.0 billion rather than $118.0 billion as recorded.

QUESTION:

What is the estimated effect of undervaluation and misreporting of exports on the quality of foreign trade statistics in the monthly balance of trade reports?

ANSWER:

If the above estimated undercount were applied to the latest monthly trade deficit (December 1989), the $7.0 billion deficit could be lowered by $1-2 billion.

Our experience with the undercount of exports to Canada, for example, has shown that the level of undercount varies from month-to-month. This variation could have a significant effect on the month-to-month changes in the trade balance.

QUESTION:

How do you plan to address these problems with the requested increase for FY 1991?

ANSWER:

The requested funding will be used to conduct more exhaustive follow up to the initial air audits and to conduct initial audits of major seaports and at Mexican border crossings. The results of these audits will be the primary source of information to help us determine where regulatory changes will benefit coverage and for extensive educational efforts in the exporting community. The results also will provide the U.S. Customs Service with information on where to place its limited resources for more accurate collection of export documentation and for enforcement of controlled merchandise leaving the United States.

Demographic Surveys

QUESTION:

You are requesting an increase of $2,826,000 and 49 positions to modernize the Current Population Survey

Processing System and begin restoration of the Survey of Income and Program Participation. How are you going to modernize the Current Population Survey and Processing System and how much of an improvement will the request provide for the SIPP?

ANSWER:

We will modernize the CPS processing system by redesigning it to reflect present day computer hardware and software technology. We will automate the clerical operations that have remained in the system since its last major overhaul in the 1960s; utilize micro- and minicomputers to improve processing efficiency and flexibility; improve the interface of the system with the computer-assisted interviewing procedures that we will be using in the 1990s; and develop data products that are more compatible with the computer analysis techniques that analysts in the public and private sectors are now using. The overall goal of the modernization is to develop a more efficient processing system that will permit more in-depth use of the CPS data for policy formulation and evaluation.

Regarding SIPP, our fiscal year 1991 request will permit the first step in the sample restoration process that will return the SIPP to its original design of overlapping panels of 20,000 households. The panel introduced in 1991 will have 14,000 households. Adding these households to the restructured 1990 panel of 21,500 households will improve the reliability of intrayear estimates of people moving into and out of poverty and the characteristics of people who become eligible for government assistance programs by about 13 percent. The sample restoration also will allow the Census Bureau to detect an 18 percent smaller change in the survey's cross-sectional estimates, for example, a change in the number of households who are receiving food stamps.

Finally, this increase will permit the Census Bureau to extend a panel's duration to eight interviews per household, thus increasing our ability to analyze changes in households' and persons' economic situations over time. For example, it will broaden the window for observing changes in family income that are related to significant demographic events such as births, divorce, widow(er)hood, and so forth.

Business Statistics

QUESTION:

In the Business Statistics Program you are requesting an increase of $3,910,000 and 91 positions. What specific programs would these funds be allocated for, and how do you plan to improve the quality of data in these areas?

ANSWER:

Improvements to Advance Retail Sales Estimates ($1,069,000).

This program increase will fund the research, identification, and other actions necessary to provide more accurate advance retail sales estimates data. Results of this program are published on the 9th working day following the month of reference -- an extremely timely economic indicator.

While sampling error is well controlled, non-sampling errors can be lowered, which will provide a higher degree of precision of the estimates.

Research activities will address non-sampling error as a result of non-response, early collection of the data, non-standard reporting by respondents and adjustments applied to the data during processing.

Improved Measurements of Services Purchased by Industry ($523,000).

This initiative will collect new data on legal, accounting, and other services purchased by industry, and will provide a more comprehensive set of statistics on the costs of doing business and, in manufacturing, provide a more accurate measure of value added by industry. These data are essential for improving the annual input-output tables and the derivative gross national product accounts.

Detail Data for More Service Industries ($1,050,000).

This initiative will publish annual detailed measures of industry output, payroll and other expenditures for personal, business, travel and recreation, and health and social service industries. At present, data for these industries are limited to a single measure, total operating receipts.

In addition we are requesting $400,000 to identify and measure newly emerging growth industries, mainly in the rapidly growing service sector.

Both initiatives will provide necessary input-output data for more accurate calculations of national income and product accounts, benchmark, and annual input-output tables. They are crucial for development of more precise GNP calculations. BLS needs these data for input to their Producer Price Indices and for developing productivity measures.

Small Company Financial Data ($418,000).

This initiative will improve the precision of published estimates and restore to previous levels the sample of small companies that currently are not represented in the Quarterly Financial Report (QFR) program.

Improvements in the quality and availability of key financial performance indicators, such as profitability and debt structure, for the small business sector will be accomplished by adopting new methodologies developed in prior years but not implemented due to lack of funding, and by restoring the QFR small company samples in mining and trade which, in turn, will allow for publication by size in those sectors. Currently, the official corporate profits data for wholesale and retail trade are no longer representative of small companies because of sample size reductions made over the last decade. These two sectors are heavily populated by small firms and the inclusion of these companies will significantly improve the quality of data used in economic policy making.

Expanded Corporate Financial Data ($450,000).

This initiative will fund an expansion of the Quarterly Financial Report (QFR) program to provide comprehensive financial information for the services sector on a comparable basis to that currently being published for the manufacturing, mining, and trade sectors.

This expansion will satisfy the increasing demands made by the Congress and Administration for reliable services data. Key measures of financial well being such as profitability, indebtedness, investments, and equity are not available on a current basis from any Federal agency.

QUESTION:

Please give us some specific examples of the problems that have arisen because of the failure to improve the quality of data in these various areas in the past.

ANSWER:

Improvements to Advance Retail Sales Estimates

The timely U.S.-level estimates constructed from early reported data in the advance survey differ from the later preliminary and final estimates. While sampling variability accounts for some of these differences, various nonsampling errors are believed to be accounting for most of the differences. A specific example illustrates this: Month-to-month change for May 1989 (compared to April 1989) was estimated in the advance survey as +0.1 percent. The final estimate from the later, full-sample monthly retail survey was +0.8 percent. Such errors in the initial estimates can mislead policy-makers. We expect results of the research to benefit not only the advance retail survey, but also the full-sample monthly retail survey as well as other economic surveys.

Services Purchased by Manufacturers

The basic source of information about the growth or decline of individual business sectors is the gross national product (GNP) accounts, which are dependent on the economic censuses data and related annual programs compiled at the Census Bureau. From 1950 to 1986, the GNP estimates showed that manufacturing's contribution was remarkably stable at roughly 20 to 22 percent in constant 1982 dollars; however these estimates do not fully reflect the growing trends for many manufacturing firms to purchase legal, bookkeeping, and other services from outside suppliers rather than performing these activities "in-house." Only limited data on these purchased services by industry are collected by the Census Bureau.

Detailed Services Industry Data and Data on Emerging Industries

Structural changes and technological innovation have had a profound effect on the Nation's economy. Unfortunately, our statistical system has not kept pace. Service industries are changing faster than our ability to identify, classify, and measure them. There are currently insufficient supporting data to provide insights as to why or how changes are occurring in important services. In the health care industry, there are constant changes in the delivery patterns for medical services (new technologies/ insurance payments); automotive lease and rental options radically affect buying patterns (changing tax laws); and, the demand for better information on social services such as job training and child day care (business and life style changes) continues to impact economic measures.

Without these new data, our national understanding of growth, prices, and changes in demand within these industries is handicapped. Development of price indices and productivity measures are less precise due to a lack of detailed receipts and expenditure data. The BLS needs these expanded data to improve the quality of their Producer Price Indices. And, these more complete data are important for BEA's improvement of National Income and Products Accounts estimates and their annual input-output tables.

Small Company Financial Data

The plan for these improvements originated with a request in 1985 by the House Committee on Small Business for special tabulations of QFR data. Add-ons to the QFR budget were provided at Congress' initiative in 1985 and 1986 to develop a plan to remedy the problem, but funding for implementation did not occur. This request is the outgrowth of that work and addresses not only the shortcomings identified by the committee but the needs of BEA for improvements in GNP estimation.

Expanded Corporate Financial Data

Currently the Bureau of Economic Analysis (BEA) must rely on its own small sample and seriously lagged Internal Revenue Service (IRS) data to develop estimates of service sector profits for current years. There is no current indicator available to BEA for gauging quarterly movement. The problem caused by this lack of complete and timely data was seen clearly in BEA's underestimate of services sector profitability growth from 1985 to 1986. Their estimates showed an increase from $13.4 billion in 1985 to $14.7 billion in 1986, or 9.7 percent. Data recently released by IRS for 1986 show services corporate profits at $18.2 billion, an increase of 35.8 percent, nearly 4 times greater than BEA's estimates.

Manufacturing Statistics

QUESTION:

In the Manufacturing Statistics Program you are requesting an increase of $2,450,000 and 57 positions. What specific programs would these funds be allocated for, and how do you plan to improve the quality of data in these areas?

ANSWER:

The funds will be used to initiate a new annual investment survey ($2,000,000) and to improve the reliability of statistics published from the Manufacturers' Shipments, Inventories, and Orders (M3) survey ($900,000). We will eliminate selected Current Industrial Reports (-$450,000) to offset some of the funds needed for these two initiatives. Data collected in the annual investment survey will provide additional details that are critical in analyzing productivity growth and the ability of U.S. businesses to compete with foreign producers. The survey will be based on a probability sample drawn from a frame of all nonfarm businesses so that statistical reliability of the estimates can be measured. Also, the results of the survey will provide annual benchmark data for the estimates from the quarterly Plant and Equipment Expenditures Survey that have been subject to large revisions.

Funds for the M3 will allow improvements in the quality and quantity of responses to the survey. Both will improve the quality of data. We will increase direct contact with large company officials to get better overall response which, in turn, will allow for the publication of greater industry detail. We will implement a probability sample; introduce rotating samples to minimize reporting burden; and utilize other sampling techniques to provide accurate estimates of the statistical reliability of the data.

QUESTION:

Please give us some specific examples of the problems that have arisen because of the failure to improve the quality of data in these various areas in the past.

ANSWER:

The accuracy of the Government's only statistical estimate of planned business investment for 1990 is questionable. This hinders policymakers' ability to make decisions on savings, investment, and other economic policies. The accuracy is questionable because the survey that provides the estimate of planned investment indicates that actual investment grew 10.3 percent from 1988 to 1989 while the national income and product accounts indicate that actual investment only grew 5.0 percent during the same period.

Lack of more frequent benchmarking in the area of investment has caused serious revision problems and, more importantly, probably poor investment decisions in the past.

As further evidence for the need for improvements in the area of investment data, the Economic Policy Council's Working Group on the Quality of Economic Statistics made a specific recommendation to initiate an annual survey of investments.

For example, in 1980 the Government's statistical picture of historical investment in the United States was substantially altered when data series on actual investment were benchmarked to improve their accuracy. An important reason for the magnitude of the almost 20% revision was the 10-year lapse since the previous benchmark. Past tax, investment, and other economic policy decisions may have been misdirected since the revisions were so large.

Data from the Manufacturers' Shipments, Inventories, and Orders survey are key indicators required for policymakers' current decisions on fiscal and monetary policy. They also provide key investment, marketing, and production information to the private sector. Thus, the accuracy of these data are critical for sound economic decisions.

General Economic Statistics

QUESTION:

You are requesting an increase of $575,000 and four positions in the General Economic Statistics Program; a portion of this increase is to finance the National Trade Data Bank required by the Omnibus Trade and Competitiveness Act of 1988. What is the Bureau's role in the National Trade Data Bank?

ANSWER:

The portion of the increase that is for the National Trade Data Bank is to cover a training program for state development agencies and Federal depository libraries and to develop the software for the addition of data from international organizations such as the United Nations, the IMF and the World Bank. The new total for the NTDB is still modest for a project of its size and impact.

Ranking of Program Increases

QUESTION:

All of the program increases for Salaries and Expenses Account total $9,978,000 and 201 positions; those are large increases. What are your priorities?

ANSWER:

We have categorized our program increases for the Salaries and Expenses Account into three categories: "A, B, and C" with "A" being our top priority. The priority list is as follows:

CATEGORY A--	Perm. Pos.	Dollars (000's)
Increased funds to develop additional data sources for National Trade Data Bank.........	0	$ 200
Modernization of current population survey (CPS) processing system...............	19	926
Restoration of survey of income and program participation (SIPP)........................	34	2,000
Subtotal "A"	53	3,126
CATEGORY B--		
Investment survey.................	43	2,000
Manufacturers' Shipments, Inventories and Orders (M3) Survey..........................	24	900
Improve Foreign Trade Statistics..	13	500
Subtotal "B"	80	3,400

	Perm. Pos.	Dollars (000's)
CATEGORY C--		
Improvements to advance retail sales estimates	19	1,069
Improved and expanded service statistics	72	2,841
Standard industrial classification (SIC) research	4	375
Metropolitan statistical area	1	250
Subtotal "C"	96	4,535
Total Program Increases	229	11,061
Total Program Decreases	(28)	(1,083)
TOTAL PROGRAM CHANGES	201	9,978

2000 Census

QUESTION:

You are requesting an increase of $747,000 and 11 positions for preparation and planning, including research and development for the Year 2000 Decennial Census. What innovative techniques are you considering for the 2000 Census?

ANSWER:

We are looking for innovative changes to improve the cost, quality and timeliness of future censuses. Some possibilities for consideration include:

- operational changes: eliminating, limiting or revising the schedule of operations
- the field management and data processing office structure
- the use of new technologies and automated equipment and its distribution throughout the office structure
- the maintenance and updating of the address list by innovative methods and on a more regular basis throughout the decade

- the design of better questionnaires and mailing packages, with attempts to design effective procedures for problematic subpopulations
- the use of different residence rules, forms and list matching techniques to improve coverage
- the use of matrix sampling or alternative sampling rates for estimates of characteristics, and
- the use of multiple reminder cards or mailings to nonrespondents for mailed forms.

QUESTION:

I understand that these funds will be used to begin planning for field tests in 1993. Will you have sufficient time to complete an analysis of innovative techniques in time for a test in 1993?

ANSWER:

Of the $747,000 about $250,000 would be used to begin planning for 1993 field tests of new census content, methods, technologies and field office structures. Initial analysis of innovative techniques is underway through the current work of the 21st Century Decennial Census Planning Staff and the Research, Evaluation and Experimentation activities planned as part of the 1990 census. We will have sufficient time and resources to plan appropriate field tests in 1993 if we receive sufficient additional funding in 1991.

QUESTION:

Based upon the lead times required for planning previous decennial censuses, when will the Bureau have to make final decisions on the design for the 2000 Decennial Census?

ANSWER:

The overall schedule for the 1990 Census was motivated by the need to conduct a true dress rehearsal of the 1990 methodology and automated systems in the spring of 1988. In order to plan and prepare for the dress rehearsal, we made most of the major design decisions in the fall of 1986. As a result of procurement and software lead-times and the volume of preparatory work, the implementation schedule contained very little slack or flexibility. Fortunately, we have experienced no serious delays for 1990. However, to reduce the risk and vulnerability of a very tight implementation schedule, we hope to make the major design decisions for the 2000 Census by the spring of 1996. These decisions will include: the data collection methods to be used, the office structure for data collection and processing, and the automated systems design to support all census activities. We must make some earlier decisions in the spring of 1995 about how we will prepare the address lists and geographic data files and materials. The law now requires final determinations on specific topics and questions to be included in the census in 1997 and 1998 respectively.

Geographic Support

QUESTION:

The budget justifications indicate that in FY 1991 the Census Bureau will begin to develop prototype systems to update the automated geographic files using information gathered in consultation with other federal agencies and state governments. How many different prototype systems are being considered?

ANSWER:

The Census Bureau, in planning for the maintenance of the automated cartographic and geographic data base it developed over the past 7 years, hopes to take advantage of the enormous growth in the use of digital cartography and geographic information systems (GIS) by other public and private-sector mapping organizations. The prototype systems we propose to develop are cooperative agreements with outside mapping organizations that involve digital cartographic data transfer and sharing. We already have begun exploratory discussions on potential cooperative agreements with three Federal and three state organizations interested in having and sharing the task of maintaining digital cartographic data bases; these organizations may be excellent sources of up-to-date map feature information that the Census Bureau can incorporate into its automated geographic files in a cost effective manner. To further the likelihood that these prototype systems will succeed and have more general applications as a data base maintenance procedure, we have been participating actively in the national effort to implement a set of standards for the exchange of digital spatial data. This effort, sponsored by the National Institute of Standards and Technology within the Commerce Department, is being implemented technically by the U.S. Geological Survey with whom we maintain a close and cooperative working relationship.

QUESTION:

Does the Census Bureau have any cost estimates for maintaining this system through the 1990s?

a. Have you considered alternatives to maintaining this system, such as using geographic files maintained by other federal agencies?

b. How much of the cost of maintaining the geographic files will be offset by user fees for the products?

ANSWER:

The Census Bureau has made its fiscal year 1991 cost estimate for activities to maintain the automated geographic support system and is developing preliminary cost estimates for those activities that will occur in fiscal years 1992 through 1996. The Census Bureau expects to refine these preliminary cost estimates extensively once we have developed and executed the planned prototype agreements for transferring and sharing digital cartographic data with outside organizations; this approach to system maintenance is technologically and operationally quite different from the more labor intensive techniques used to build the automated geographic support system.

Our discussions to date have not identified any outside geographic file that could itself be used to meet the complex geographic support needs of the Census Bureau. No other Federal Agency has more current nationwide coverage than the Census Bureau, at this time. We are, of course, continuing our cooperative relationship with the U.S. Geological Survey and will continue to exchange digital data with that agency as newer information becomes available.

It is unclear whether the costs to maintain the automated geographic support system will be recovered through user fees. The Census Bureau is currently making extracts of its automated geographic files available to public users, and is recovering only the costs of dissemination that Federal regulations permit, not the costs of developing or maintaining the system.

QUESTION:

The ADP portion of the FY 1991 budget request includes about $2.4 million for support for an automated geographic cartographic production system, which includes maintenance of previously acquired systems. This appears to be the same activity that is described under the Geographic Support budget activity. Why are funds for maintenance requested under two different budget activities?

ANSWER:

The automated geographic support system is composed of the automated cartographic data base itself, the software systems used to modify and use the data base for geographic support applications, and the hardware systems on which the data base is stored and manipulated. The funds associated with the geographic support system in the ADP portion of the FY 1991 budget request are related strictly to the maintenance of the system hardware; the funds in the Geographic Support budget activity are for the development and maintenance of the data base, associated software, and related geographic programs.

QUESTION:

What type of equipment does the Census Bureau need to acquire to provide continuing geographic support for FY 1991?

ANSWER:

The Census Bureau has limited equipment acquisition requirements to meet its commitments for providing geographic support services for FY 1991. We plan to use the funds in excess of those required for hardware maintenance to purchase limited quantities of hardware to support its development of prototype systems for the maintenance of the geographic support data base. The Census Bureau also may purchase some additional data storage capacity.

UNITED STATES DISTRICT COURT
EASTERN DISTRICT OF NEW YORK

THE CITY OF NEW YORK, et al.,
Plaintiffs,
v.
UNITED STATES DEPARTMENT OF COMMERCE, et al.,
Defendants.

88 Civ. 3474 (JMcL)

STIPULATION AND ORDER

WHEREAS the Secretary of Commerce is vested by law with supervisory authority over the Bureau of the Census and the conduct of the Decennial Census and does not by anything said herein intend to relinquish any authority or decision-making power thereby duly vested in him, including without limitation the decision whether or not to adjust the 1990 Decennial Census; and

WHEREAS the Secretary of Commerce intends that the 1990 Decennial Census shall be conducted in conformity with all applicable statutory and constitutional requirements including without limitation 13 U.S.C. § 141(b), (c) and in a manner designed to achieve the most accurate population counts practicable; and

WHEREAS the parties hereto at this time believe that the Census, including a post-enumeration survey and other adjustment-related operations, can and will be conducted in a manner that will result in the most accurate counts practicable, and no party has any basis at this time to believe that the Census, including the PES and adjustment-related operations, cannot and will not be conducted in such a manner; and

WHEREAS the parties wish to avoid the burdens, costs and delays of unnecessary litigation.

NOW, THEREFORE, IT IS HEREBY STIPULATED AND AGREED, by and between the undersigned, that:

1. All pending motions, including plaintiffs' pending Motion for a Preliminary Injunction, are withdrawn.

2. Defendants agree and represent that, notwithstanding the decision by the Department of Commerce (the "Department") announced on October 30, 1987, that there would be no statistical adjustment or correction for undercount or overcount in the 1990 Decennial Census, and without conceding that that decision was incorrect, the decision is vacated, and the question of whether or not to carry out a statistical adjustment of the 1990 Decennial Census ("adjustment") shall be made by a thorough de novo recon-

sideration undertaken with an open mind, without any prejudgment, and consistent with the procedures set forth herein.

3. Defendants agree and undertake to conduct a post-enumeration survey ("PES") of not fewer than 150,000 households, a number defendants believe is sufficient for the purpose, and such other procedures or tests as they deem appropriate, as part of the 1990 Decennial Census in a manner calculated to ensure the possibility of using the PES, not solely for evaluation purposes, but to produce corrected counts usable for congressional and legislative reapportionment, redistricting and all other purposes for which the Bureau of the Census (the "Bureau") publishes data.

4. Defendants agree that the Department will promptly develop and adopt guidelines articulating what defendants believe are the relevant technical and nontechnical statistical and policy grounds for decision on whether to adjust the 1990 Decennial Census population counts. The Department's proposed guidelines shall be published in the Federal Register by December 10, 1989, with a request for comments. The guidelines shall be published in final form in the Federal Register by March 10, 1990.

5. Defendants shall determine whether an adjustment satisfies the guidelines specified in para. 4 hereof.

If the Secretary determines to make an adjustment, defendants shall publish corrected 1990 Decennial Census population data at the earliest practicable date and, in all events, not later than July 15, 1991. If the Secretary determines not to make an adjustment, defendants shall publish at the earliest practicable date and, in all events, not later than July 15, 1991, a detailed statement of its grounds, including a detailed statement of which guidelines identified in para. 4 above were not met and in what respects such guidelines were not met.

6. Defendants intend to report census counts in accordance with the dates set forth in 13 U.S.C. §§ 141(b), (c). In the event that the Department releases or publishes any population counts from the 1990 Decennial Census prior to its determination with respect to adjustment in accordance with para. 5 hereof, defendants agree that each such release or publication shall bear the following legend conspicuously on the first page:

> "The population counts set forth herein are subject to possible correction for undercount or overcount. The United States Department of Commerce is considering whether to correct these counts and will publish corrected counts, if any, not later than July 15, 1991."

7. Defendants shall establish as soon as practicable and, in all events, not later than September 30, 1989, an independent Special Advisory Panel (the "Panel") to

advise the defendants on all matters relevant to the implementation of this Stipulation and, in particular, and without limitation, the guidelines identified in para. 4 above, the application and achievement of the guidelines, the expedition with which defendants are proceeding toward decision on adjustment, and plans and schedules for the implementation of the Census and the PES in a manner that will result in the most accurate final census data at the earliest practicable time. The Panel shall be comprised of eight persons, none of whom shall be employed by any of the parties hereto, of such knowledge, judgment, and probity that their judgment and advice shall be entitled to the utmost respect by defendants. All eight persons shall be appointed by the Secretary of Commerce. The Panel shall have two co-chairs from among their number appointed by the Secretary. Each member of the Panel shall submit his or her recommendations to the Secretary.

8. The members of the Panel shall be entitled to call for and shall receive the fullest cooperation from defendants, including access to all necessary or appropriate information and the opportunity to consult with any employee of the Bureau. Defendants shall take all steps necessary to give each member of the Panel reasonable access to all relevant records and information, including administering appropriate oaths of secrecy pursuant to 13 U.S.C. § 9. The

Panel or any member thereof may make such disclosures, consistent with all applicable statutory requirements, as it or he deems appropriate. The Panel may adopt such rules for its governance as it deems appropriate.

9. The Department shall pay the members of the Panel a stipend of 284.80 $287.50 per day for each day on which the Panel meets and such member is present and shall reimburse the members of the Panel for their reasonable and necessary expenses of travel and lodging in connection with the work of the Panel. The Department shall furnish the Panel with appropriate meeting and office facilities and clerical assistance. The Panel is entitled to retain appropriate assistants who shall be entitled to access to all materials made available to the Panel. Defendants shall make available to the Panel a fund of $500,000 against which each co-chair may draw, consistent with existing laws, rules, and regulations governing the expenditure of appropriated funds, for appropriate resources to ensure that Panel members can perform their mission.

SEA
P13
RSA
[illegible]
FW/[illegible]

10. The Panel shall dissolve on agreement of the parties that all of its functions pursuant to this Stipulation have been satisfied.

11. Except as expressly set forth herein, the parties reserve all their respective rights, claims, and defenses. Specifically, and not by way of limitation,

plaintiffs reserve the right to challenge any of the guidelines, decisions, or procedures adopted, omitted, implemented, or announced in connection with or arising out of this Stipulation.

Re: The City of New York, et al. v. United States
Dept. of Commerce, et al., No. 88 Civ 3474 (JMcL)

Dear Sir:

This letter sets out a commitment on behalf of the Secretary of the United States Department of Commerce ("the Secretary") and as part of his obligation under para. 7 of the Stipulation executed today by the parties to the above-captioned litigation.

In para. 7 of the Stipulation, the Secretary agrees to convene a Panel of eight eminent experts (the "Panel"). You shall be entitled to submit to the Secretary, on or before August 15, 1989, the names of seven candidates for membership on the Panel. The Secretary shall select at least four of your candidates to be members of the Panel. Furthermore, the Stipulation calls for two co-chairs to be selected from among the members of the Panel. Once the Secretary appoints the eight members of the Panel, you may nominate one of the two co-chairs, whom the Secretary shall appoint.

All members of the Panel, including those selected from the list of your nominees (and including any Panel members appointed as a result of vacancies), shall undergo normal background checks before they are appointed. In addition, to the extent there is a vacancy on the Panel during its existence, the vacancy shall be filled by the Secretary within two weeks after receiving notice of the vacancy, except that with respect to vacancies of one of your nominees, within two weeks of your sending to the Secretary a list of two proposed replacements, as set forth below. In the event that vacancy occurs with respect to one or more of your nominees, the Secretary shall appoint one of two persons for each such vacancy as proposed by you. If any such vacancy occurs with respect to a co-chair whom you selected, you may, upon appointment by the Secretary of the replacement, nominate a new co-chair, whom the Secretary shall appoint.

This commitment binds the Secretary and any successor and runs in favor of you and any successor.

Sincerely yours,

Michael Darby
Under Secretary for
Economic Affairs
United States Department of Commerce

Questions Submitted by Congressman Carr

FY 1990 Budget

QUESTION:

What was the total cost to the Census Bureau of sequestration?

ANSWER:

The total sequestration to the Bureau was $9,641,000 for FY 1990: Sequestration in the Salaries and Expenses appropriation was $1,398,000; in the Periodic Censuses and Programs appropriation, $8,131,000, of which $7,661,000 was for the Decennial Census; and in Reimbursable Programs, $112,000.

QUESTION:

How has the Census Bureau accommodated the $57 million cut in its budget for fiscal year 1990 and the additional losses through sequestration?

ANSWER:

Our ability to proceed as planned within the currently appropriated amount depends primarily upon the mail response rate, which we shall know in late April. As we have told this Committee before, we had requested a FY 1990 budget that assumed a 70 percent mail response rate (as compared to an actual response rate of 75 percent in 1980.) Given the Congressional budget cut in FY 1990, if the actual rate in 1990 is at or near 70 percent, we may have a budget shortfall. In that case, we will need to look at options to cover the shortfall. If the actual rate approximates our 1980 experience, we hope to be able to proceed within existing funding levels.

The mail response rate is critical because we must visit each housing unit for which a questionnaire is not returned. We estimate that each one percent change in the mail response rate translates into approximately $10 million. However, it is difficult to predict definitively any budget shortfall which might result based solely on the mail response rate. Other factors that may affect the size of any shortfall include keying and enumerator productivity rates, attrition and the size of the census job applicant pool. Of course, other totally unanticipated setbacks, such as natural calamity, may also affect funding needs. We will be in a better position to address our funding situation when the mail response rate is known.

To the extent that we can achieve savings in currently planned operations over the next few weeks without compromising the census, we will make every effort to do so. Assuming existing planning parameters are met and there are no unanticipated setbacks or additional savings achieved, we now expect we may need an actual mail response rate of approximately 75-76 percent. We will monitor carefully the response rate during mid-to-late April and will keep the Committee fully apprised. We understand that supplemental appropriations have been required during past decennial years.

QUESTION:

In response to the $57 million budget cut, Under Secretary Darby informed Congress that the Census Bureau was planning to curtail procedures for editing census questionnaires. How will that change affect the accuracy of the decennial census?

ANSWER:

The Census Bureau considered making the vacant/delete check contingent on the mail response rate. Because of the coverage implications of eliminating the vacant/delete check, we are now committed to proceeding with this operation.

In addition to the $57 million cut, we had some increased requirements and cost absorptions, such as the $7.7 million sequester, increased training costs due to the new minimum wage, and increased rate of attrition for certain field staff. The changes to our edit follow-up plans were made in response to the need to cover these increased requirements and cost absorptions.

As originally planned, we will continue to edit and follow-up on questionnaires that fail edit because there may be additional persons who need to be enumerated and on all long form households that fail edit. We think that these changes will have little or no effect on census coverage. The questionnaires affected by the change in the edit follow-up program have relatively low failure rates with minimal follow-up and correction required. These revisions will reduce quality of the characteristics data and we plan to evaluate these effects.

QUESTION:

Will the budget cuts affect the Census Bureau's ability to meet its payroll obligations?

ANSWER:

The Census Bureau will be able to meet its payroll obligations.

QUESTION:

Have the geographic wage scales solved staffing problems in high-wage areas?

ANSWER:

We did have very positive experience during the 1988 and 1989 operations, where we established higher pay rates in selected areas where we were having difficulty recruiting. In general, these higher rates allowed us to successfully recruit the staff necessary to complete the operations.

The implementation of the full range of geographic wage scales did not occur until FY 1990. That is, we have not yet staffed any major operations in high-wage areas for the census at this point in time. Some of the major operations which require large staffs start in March 1990, leading to our peak staffing level of 285,000 persons in May 1990. Our recruiting program is designed to generate a sufficient number of applicants to meet these staffing requirements.

To date, we have not had any major difficulties in meeting our staffing requirements for the operations that occurred in late January through early February. Recruitment efforts to meet staffing requirements for the larger operations such as nonresponse follow-up, are proceeding on schedule. In general, we believe the geographic wage scales have contributed to our ability to meet our recruiting goals up to this point in time.

QUESTION:

How has the revised federal pay scale affected the budget for the Census Bureau?

ANSWER:

In FY 1990, the Census Bureau absorbed the full cost of the January 1990 pay raise of $1,872,000 in the Salaries and Expenses account and $10,179,000 in the Periodic Censuses and Programs account.

QUESTION:

Under Secretary Darby recently testified that the Census Bureau has "resolved definitely to proceed with the vacant/delete check as originally planned."

a. What is your best estimate of the cost of the vacant/delete program?

b. Has the Census Bureau considered reducing costs by conducting vacant-delete on a sample basis? How does the data from such a sample compare with data from 100% follow-up?

c. Does the Census Bureau see any Constitutional or statutory prohibitions against conducting vacant/delete on a sample basis?

d. How will vacant/delete affect the Bureau's ability to conduct the Post Enumeration Survey and other adjustment-related procedures in a timely manner?

e. Will vacant/delete on a 100% basis interfere with the Census Bureau's ability to provide the data necessary for the Secretary of Commerce to make an informed decision on adjustment by July 15, 1991?

ANSWER:

The vacant/delete operation costs about $64 million. As stated earlier, we are proceeding with the vacant/delete program as originally planned. This program would not affect our ability to conduct necessary adjustment-related activities.

The Department has in the past had legal concerns about conducting the vacant/delete check on a sample basis. In 1970, a sample vacant/delete check was adopted as an emergency measure. In 1980, a full vacant/delete check was conducted. The decision to undertake a full check in 1980 was based in part on the recognition that sampling appeared to be inconsistent with Section 195 of United States Code Title 13. Nonetheless, the decision to conduct a full check in the 1990 Census was based on the considerations outlined above.

(Also see response to related question from Congressman Smith under Vacant/Delete check)

QUESTION:

How is the Census Bureau's enumerator hiring coming along?

ANSWER:

We have been able to recruit sufficient staff to complete the precensus operations conducted to date. These operations, however, are small in comparison to the upcoming major operations, such as nonresponse follow-up. To meet the staffing needs for the major operations, we have established a very high recruiting goal for each district office. The recruiting goal is based on a somewhat "worst-case" scenario. Specifically, the recruiting goal assumes that:

- o No employee will work in more than one job or operation.
- o We will experience our expected turnover rates, which range from 50% to 100%.
- o We must recruit 4 persons for every person we plan to hire to allow for a sufficient number of qualified applicants that will accept the job when offered.

To date, our recruiting is proceeding according to plan. We reached our national target of recruiting 30 percent of the recruiting goal (about 2 million persons) in advance of our March 2 date for reaching this level. We are working closely with those district offices that have not been able to meet our established goals. We will continue to monitor the district office recruiting efforts on a weekly basis.

QUESTION:

Will the Bureau meet all of its needs and if not, why not?

ANSWER:

The recent Congressional cuts of $57.6 million from the President's request on top of previous cuts and cost absorptions might compromise our ability to conduct a full and fair census.

Our ability to proceed as planned within the currently appropriated amount depends primarily upon the mail response rate, which we shall know in late April. As we have told this Committee before, we had requested an FY 1990 budget that assumed a 70 percent mail response rate (as compared to an actual response rate of 75 percent in 1980.) Given the Congressional budget cut in FY 1990, if the actual rate in 1990 is at or near 70 percent, we may have a budget shortfall. In that case, we will need to look at options to cover the shortfall. If the actual rate approximates our 1980 experience, we hope to be able to proceed within existing funding levels.

The mail response rate is critical because we must visit each housing unit for which a questionnaire is not returned. We estimate that each one percent change in the mail response rate translates into approximately $10 million. However, it is difficult to predict definitively any budget shortfall which might result based solely on the mail response rate. Other factors that may affect the size of any shortfall include keying and enumerator productivity rates, attrition and the size of the census job applicant pool. Of course, other totally unanticipated setbacks, such as natural calamity, may also affect funding needs. We will be in a better position to address our funding situation when the mail response rate is known.

To the extent that we can achieve savings in currently planned operations over the next few weeks without compromising the census, we will make every effort to do so. Assuming existing planning parameters are met and there are no unanticipated setbacks or additional savings achieved, we now expect we need an actual mail response rate of approximately 75-76 percent. We will monitor carefully the response rate during mid-to-late April and will keep the Committee fully apprised. We understand that supplemental appropriations have been required during past decennial years.

QUESTION:

Will the Census Bureau be able to have enough materials printed for foreign language instruction materials and other promotional items?

ANSWER:

We are in the process of providing foreign language assistance guides in 32 languages for use in communities requiring special assistance in languages other than

English or Spanish. These are being provided to local walk-in assistance centers that provide questionnaire assistance at about 10,000 locations throughout the country, as well as to the district offices for use by census enumerators. Other assistance specifically aimed at respondents who do not speak English or require assistance in a foreign language include the Spanish-language questionnaires that are available upon request from respondents who receive English-language forms. We also have implemented toll free "800" number telephone assistance service in Spanish and six Asian languages. The 800 numbers are listed on the census questionnaire, English and Spanish versions of the "Were You Counted?" form and on the Early Alert Multilingual Mail-out flyer. We think that we have provided for adequate supplies of printed materials to support these efforts successfully.

Production of some of our promotional materials has occurred later than originally planned and in some cases, at higher than budgeted costs; however, sufficient quantities are being provided to meet the objectives of the 1990 promotion and outreach plan.

QUESTION:

How is the Bureau's homeless count effort coming along?

ANSWER:

The Census Bureau has attempted to count as part of the 1990 Census selected components of the homeless population. On March 20-21, 1990, shelter and street night, or S-Night, the field operation to enumerate selected components of the homeless, was implemented as planned. We believe that the conduct of S-Night was successful, and represents a good start to the 1990 Census enumeration efforts.

Several preparatory steps had to take place to ensure a successful enumeration. Last fall, the Census Bureau contacted over 39,000 local governments in an effort to identify shelters, street locations, and abandoned buildings where the homeless may congregate. For cities of 50,000 population or more, we received responses from over 92 percent of the governments. For those that did not respond, the local district office worked with local organizations or agencies that provide services to the homeless to identify these same types of locations.

We also made an effort to recruit the homeless and people who work with the homeless to conduct the enumeration.

All procedures, forms, and materials required to conduct S-Night were in place as planned. The enumeration took place on March 20-21, with a few cities (including Washington, DC and Phoenix) carrying over into a second night to complete the enumeration.

QUESTION:

How is the Bureau's group quarters enumeration coming along (which will count college campuses such as Michigan State University)?

ANSWER:

Our group quarters enumeration activities are proceeding according to plan. All procedures, forms, and materials required to conduct group quarters enumeration have been completed. We have successfully completed the necessary preparatory operation, known as special place prelist, where enumerators visit special places, including colleges and universities, to identify, classify, and obtain information about each living quarters at the special place. They also establish a contact at the special place whom they will work through to conduct the enumeration. This includes establishing time when students will be at the school, and if spring break occurs during the time period scheduled for group quarters enumeration, we will conduct enumeration before students leave or upon their return to school. The field enumeration will start on April 2, 1990.

FY 1991 Budget

QUESTION:

Does the budget request contain enough funds to ensure the timely compilation and release of census data?

ANSWER:

First, assuming that the vacant/delete check is funded through a better than anticipated mail response rate, and second, assuming that our other assumptions about productivity and work loads hold, we anticipate having adequate funds to ensure that census data are compiled and released on time and according to the goals laid out in the FY 1991 Congressional budget submission. Additionally, as mentioned earlier, we recently made a change to the edit follow-up program to cover unavoidable cost absorptions and increases required for completing census operations according to plan. Of course, a large unanticipated setback such as a national calamity could disrupt our plans to complete the census within schedule.

QUESTION:

Does the request contain enough funding to ensure the timely completion of the Post Enumeration Survey and analysis of statistical adjustment methods?

ANSWER:

The FY 1991 budget includes funding to complete the Post Enumeration Survey as planned. We have been absorbing other costs associated with adjustment, for example, for the Special Advisory Panel on Adjustment, through expenditure savings or tradeoffs with other less critical program components.

FRIDAY, MARCH 2, 1990.

DR. NED A. OSTENSO, ACTING CHIEF SCIENTIST

MARK E. BROWN, DIRECTOR, OFFICE OF BUDGET

Mr. SMITH. The first item we will consider this morning is the 1991 budget request for NOAA. The total request is $1,320,263,000. That is an increase of $101,959,000 over the amount appropriated for fiscal year 1990.

We will insert the budget justifications in support of this request into the record at this point.

General Statement

NOAA was created by the President's Reorganization Plan No. 4 of 1970 to consolidate many of the Nation's civil programs related to the oceans and atmosphere. NOAA's broad goals include the development and operation of national programs to: (1) manage and conserve selected marine resources for the economic and social good of the Nation; (2) monitor and predict weather and environmental conditions for the protection of life and property; (3) assist states in establishing and maintaining marine and estuarine sanctuaries; (4) provide basic maps, charts, surveys, and specialized data for safe navigation; (5) provide research to advance oceanic and atmospheric technology for the better management of the environment and the rational use of our natural resources; and (6) operate satellite systems to provide national and global data and information services and products.

NOAA's management structure (see NOAA-1) consists of nine staff offices and five line offices -- the National Ocean Service; National Weather Service; National Marine Fisheries Service; National Environmental Satellite, Data, and Information Service; and the Office of Oceanic and Atmospheric Research. The program structure consists of six major activities under the Operations, Research, and Facilities appropriation, and several other accounts. The six major activities are: the National Ocean Service; the National Marine Fisheries Service; Oceanic and Atmospheric Research; the National Weather Service; the National Environmental Satellite, Data, and Information Service; and Program Support.

A comparison of the FY 1990 appropriations with the FY 1991 budget request is shown below: (dollar amounts in thousands)

	1990 Appropriation		1991 Estimate		Inc. (+) or Dec. (-)		Permanent Employment 11/18/89

Highlights of 1991 Request

The NOAA budget reflects proposals to conduct a balanced program of oceanic and atmospheric science and service functions that meet high-priority national needs.

A major enhancement to support the President's initiative in global climate change is proposed. Funds would be used to fulfill NOAA's focused program responsibilities in the U.S. Global Change Research Program and to improve global change science and services by developing and applying new data management capabilities. In addition, an enhancement to the Coastal Ocean program initiated in 1990 is included.

The request provides increases to proceed with the full-scale production phase of the tri-agency Next Generation Weather Radar (NEXRAD) program as well as increases in other elements of the National Weather Service modernization.

Several NOAA programs are proposed for termination in 1991. Included in this group are grants to states and other fisheries development programs and specialized weather services. These programs have accomplished their intended goals and should now be supported by the users and beneficiaries of their services.

The changes between the 1991 base and the requested 1991 program are summarized by appropriation as follows:

Operations, Research, and Facilities

National Ocean Service - An increase is requested in the Ocean Services program to maintain basic real-time ocean data, collection, monitoring, analysis, prediction, and distribution capabilities fundamental to marine weather forecasts and warnings, (+$2,300,000). An increase is requested in the Coastal Ocean program to continue the program started in FY 1990 and will improve NOAA's capability to characterize, understand, predict, and help the Nation cope with serious coastal environmental issues (+$11,000,000). An increase is requested to fund research proposals at marine sanctuaries (+$200,000). For FY 1991, decreases will terminate funding for the Great Lakes shoreline mapping plan, which will be completed in 1990 (-$100,000); terminate state-specific geodetic surveys (-$577,000); terminate the multi-purpose cadastre program (-$1,836,000). Decreases for low-priority activities will reduce circulatory program activities (-$400,000); eliminate funding for the California data buoy program (-$151,000); terminate funding for a circulation survey of Tampa Bay which will be completed in 1990 (-$1,000,000); state specific oceans services (-$875,000); and a state specific research and development project (-$900,000). Reductions are also proposed in Coastal Zone Section 306 and 306A grants (-$4,000,000); CZM Section 309 grants (-$400,000); and CZM program management (-$500,000).

National Marine Fisheries Service - Increases are requested for Bering Sea pollock research (+$750,000); marine mammal population assessments (+$3,000,000); Alaska by-catch issues (+$750,000); and Alaskan groundfish surveys (+$700,000). Increases are also requested for PACFIN activities (+$1,000,000); Alaska groundfish monitoring (+$2,000,000); computer systems upgrades (+$1,700,000); and Driftnet Act implementation (+$300,000). Decreases are proposed for stock enhancement and disease research (-$4,287,000); protected species research (-$649,000); Chesapeake Bay studies (-$1,600,000); right whale research (-$235,000);

Alaska salmon research (-$3,766,000); sub-Arctic bottomfish research (-$753,000); Hawaii stock management plan (-$400,000); Yukon River chinook study (-$235,000); Antarctic research (-$1,300); Atlantic salmon research (-$500,000); oyster disease research (-$500,000); and field structure savings (-$4,000,000). Decreases are also proposed for: Columbia River programs (-$9,300,000); management of Georges Bank fisheries (-$471,000); and data collection on Oregon harbor seals and sea lions (-$36,000). No funding is requested for interjurisdictional fisheries grants (-$3,500,000); anadromous fisheries grants (-$2,354,000); striped bass research (-$471,000); and funding support for the three interstate fisheries commissions (-$330,000). Decreases are also proposed for product quality and safety (-$4,400,000); fish oil research (-$942,000); mahi export strategies (-$188,000); the model seafood inspection program (-$330,000); and shellfish water standards research (-$500,000).

Oceanic and Atmospheric Research - Increases are proposed for climate and global change (+$69,000,000); and for solar-terrestrial services and research (+$1,500,000). Decreases are proposed for the National Climate Program (-$1,090,000); NAPAP (-$1,487,000); PROFS (-$1,883,000); and Sea Grant (-$13,300,000). Proposed for termination are state weather modification grants Regional Climate Centers (-$1,800,000); Inter-governmental Panel on Climate Change (-$250,000); VENTS (-$2,000,000); FOCI (-$942,000); national coastal resources research and development institute (-$1,177,000); the U.S./Asia aquaculture science exchange (-$282,000); NURP (-$14,285,000); and the Key Largo tropical research facility (-$377,000).

National Weather Service - Increases are requested for MARDI (+$11,000,000); NEXRAD (+$43,284,000); ASOS (+$5,375,000); and AWIPS/NOAA-Port (+$28,367,000). Decreases are proposed for Weather Service Forecast Offices (-$787,000); Pacific-Alaskan regional headquarters consolidation (-$383,000); Southern-Central-Eastern regional headquarters consolidation (-$852,000); data buoy engineering (-$540,000); fire weather services (-$470,000); and Hawaii data buoy maintenance (-$565,000). No funding is requested for the agricultural weather services program (-$1,745,000); for the fruit frost weather program (-$679,000); maintenance of the Susquehanna River Basin flood warning system (-$700,000); maintenance of the Colorado River basin flood warning system (-$300,000); and contract observations at three locations (-$200,000). Decreases are also proposed for equipment maintenance (-$1,054,000) and maintenance of the Class VII computer (-$500,000).

National Environmental Satellite, Data, and Information Service - Increases are proposed for polar satellites (+$53,806,000); and Landsat commercialization (+$1,600,000). Decreases are proposed for polar satellites ground systems (-$4,334,000); geostationary satellites and ground systems (-$26,202,000); and Landsat operations (-$9,500,000).

Program Support - Increases are proposed for major projects procurement support (+$200,000) facilities maintenance (+$2,750,000); facilities consolidation (+$2,723,000); marine services (+$6,010,000); and aircraft services (+$1,866,000). A decrease is proposed for the Woods Hole Fisheries Lab - Bulkhead and Dock repair (-$2,000,000). Termination is proposed for the Southeast Marine Support Facility (-$282,000).

Fishing Vessel and Gear Damage Compensation Fund

An appropriation of $1,202,000 is requested to pay claims and administrative expenses under the Fishing Vessel Gear and Damage Compensation Fund.

Fishermen's Contingency Fund

An appropriation of $1,000,000 is requested to pay claims and administrative expenses under the Title IV of the Outer Continental Shelf Lands Act.

Foreign Fishing Observer Fund

Amendments to the Magnuson Fishery Conservation and Management Act allow foreign governments to contract directly for observer services from contractors approved by the Secretary of Commerce. An appropriation of $1,997,000 combined with direct contracts is sufficient to continue the current level of coverage.

Aviation Weather Services Program Trust Fund

An appropriation of $34,521,000 is requested to continue aviation weather services. This funding shall be derived by transfer from the Federal Aviation Administration Airport and Airway Trust Fund.

Justification of Adjustments to Base and Built-in Changes

(dollar amounts in thousands)

Appropriation: Operations, Research, and Facilities	Perm Pos.	FTE	Amount
Transfers	+14	+14	+$59,500

$55,000 was transferred from "Promote and develop fishery products pertaining to American fisheries" in FY 1990 as a partial offset to the direct appropriation requirements of the "Operations, Research, and Facilities" account.

$4,500 was transferred from loan principal and interest repayment in the Coastal Energy Impact Fund in FY 1990 as a partial offset to the direct appropriation requirements of the "Operations, Research, and Facilities" account.

Three positions and three FTE no longer required in the Fisheries Promotional Fund (FPF) and eleven positions and eleven FTE from Promote and Develop Fishery Products will be transferred to Operations, Research, and Facilities (ORF).

	Perm Pos.	FTE	Amount
Adjustment for 1990 pay increase and related costs		0	14,287

Total cost in 1990 of pay increase	+$10,713,000
Less amount absorbed in FY 1990	- 10,713,000
Anticipated 1990 pay increase supplemental	0
Amount in 1991 to provide full-year cost of pay increase	14,287,000
Less amount absorbed	0
Subtotal, adjustment for 1990 pay raise	14,287,000

Effective January 1, 1990 Federal employees received a 3.6 percent pay increase. In 1990, NOAA is absorbing the full cost of this pay increase.

	Perm Pos.	FTE	Amount
Adjustment for 1991 pay increases and related costs			6,753

Total cost in 1991 of general pay increase	$12,010,000
Less amount absorbed in FY 1991	-6,005,000
Subtotal, adjustment for 1991 general pay increase	6,005,000
Total cost in 1991 of SES pay increase	1,496,000
Less amount absorbed	- 748,000
Subtotal, adjustment for 1991 SES increase	748,000
Total adjustment for FY 1991 pay increases	6,753,000

The President's Budget includes an estimated general pay raise of 3.5% effective January 1, 1991. One-half of the 1991 costs of that increase will be absorbed. The estimate also includes an average SES increase of 22%, with 50% of the cost absorbed.

	Perm Pos.	FTE	Amount
Financing approved for FY 1990			+$6,000

Deobligations of $6,000,000 from various NOAA programs will be used as a partial offset to the "Operations, Research, and Facilities" account.

Other increases:

Cartographers pay increase		0	483

Special salary rates approved by OPM on June 13, 1989 increased Cartographers' pay and benefits from $4,829,305 to $5,311,924, for an adjustment-to-base increase of $482,619,000.

Extra compensable day		0	1,468

We have calculated the cost of one extra compensable day in 1991 compared to 1990 by dividing the 1990 estimate of $381,779 for personnel compensation and benefits by 260 compensable days for an adjustment of $1,468.

Federal Employees' Retirement System (FERS)		0	544

Basic benefit contributions: (+474)

The number of employees covered by the Federal Employees' Retirement Systems (FERS) will continue to rise as employees covered by the Civil Service Retirement System (CSRS) leave and are replaced by employees covered by FERS. We estimate the percentage of payroll of eligible employees covered by FERS will rise from 15.7 percent in 1990 to 16.8 percent in 1991. In addition, the agency's contribution for basic benefits will rise from 12.97 percent to 13.00 percent. The calculations for basic benefits increases are:

Payroll subject to retirement systems	$320,965
Basic benefit cost in 1991 ($320,965 x 16.8% x 13.00%)	7,010
Basic benefit cost in 1990 ($320,965 x 15.7% x 12.97%)	6,536
Increase in basic benefit contributions (1990 - 1991)	474

The cost of agency contributions to the Thrift Savings Plan will rise as FERS participation increases. We estimate agency contributions for the Thrift Savings Plan are 2 percent. The increased costs for contributions to the Thrift Savings Plan are:

Cost in 1991 ($320,965 x 16.8% x 2%)	$1,078
Cost in 1990 ($320,965 x 15.7% x 2%)	1,008
Increase in contributions (1990-1991)	70

FERS Basic Benefit	474
FERS Thrift Plan	70
Adjustment-to-Base	544

	Perm Pos.	FTE	Amount
Federal Insurance Contribution Act (FICA)...			339

Employees covered by CSRS are not covered by Old Age, Survivors, and Disability Insurance (OASDI), but are covered by Medicare. All other employees are covered by both OASDI and Medicare. As the percentage of payroll covered by FERS rises, the cost of OASDI contributions will increase. In addition, the maximum salary subject to FICA tax will rise to $52,725 in FY 1991 from $50,025 in FY 1990, and the OASDI tax rate will increase from 6.17 percent in FY 1990 to 6.20 percent in FY 1991. The percentage of payroll subject to FICA will increase from 95.7 percent in 1990 to 96.7 percent in 1991. This will result in an increase of $287,905, as follows:

OASDI: (+288)

FERS payroll subject to FICA tax in 1991 ($320,965 x 16.8% x 96.7%)	52,143	
FERS OASDI tax in 1991 ($52,143 x 6.20%)...............................		3,233
FERS payroll subject to FICA tax in 1990 ($320,965 x 15.7% x 95.7%)	48,225	
FERS OASDI tax in 1990 ($48,225 x 6.17%)...............................		2,975
Increase (1990 - 1991)..		258
Other payroll not covered by retirement systems ($33,089)...........		
Other payroll subject to FICA tax in 1991 ($33,089 x 96.7%)..........	31,997	
OASDI tax in 1991 ($31,997 x 6.20%).....................................		1,984
Other payroll subject of FICA tax in 1990 ($33,089 x 95.7%)..........	31,666	
OASDI tax in 1990 ($31,666 x 6.17%).....................................		1,954
Increase (1990 - 1991)..		30
Total, OASDI increase (1990 - 1991)................................		288

MEDICARE: (+51)

All employees are subject to Medicare contributions. While the rate will remain at 1.45 percent, the percentage of payroll subject to FICA will increase from 95.7 percent in 1990 to 96.7 percent in 1991. The cost of Medicare will increase as follows:

Total payroll ($320,965 + $33,089 = $354,054).........................	
Total payroll subject to FICA in 1991 ($354,054 x 96.7%)............	342,370
Total payroll subject to FICA in 1990 ($354,054 x 95.7%)............	338,830
Increase in payroll subject to FICA (1990 - 1991)....................	3,540
Increase in Medicare tax ($3,540 x 1.45%)..........................	51

OASDI increase...	288
Medicare increase..	51
Total, increase..	339

	Perm Pos.	FTE	Amount
Health insurance premium... Effective the first pay period following December 31, 1988, NOAA's contribution to the Federal Employees Health Benefits Program increased. The estimated cost of health benefits for NOAA in FY 89 is $15,972,000 an increase of $708,000 over the base of $15,264,000.		0	708
Benefits for former personnel... Pribilof Islands (+708) In compliance with the Fur Seal Act of 1966 and amendments (P.L. 98-129), NOAA is required to reimburse the Office of Personnel Management for annuity payments made to Pribilof Island employees who worked prior to 1950 and their survivors. The 1987 cost has increased from $471,300 to $522,300 for an adjustment of $151,000. These figures were derived from actual billings received from OPM.		0	51
Transportation of things... United Parcel Service shipping rates have increased by 4.9% effective February 6, 1989, for an increase of $35,400 for shipping and handling of aeronautical and nautical navigational products.		0	35
Rental payments to GSA... An adjustment-to-base of $2,657,000 is requested for rental payments to GSA over the 1990 adjusted base of $30,909,000. This request reflects actual costs incurred in FY 1989 (which were higher than GSA's 1989 budget estimate), costs associated with NOAA's move to Silver Spring and savings resulting from the move, as well as a 4.4% estimated increase by GSA in rent per square foot in 1991.		0	2,657
Rental payments to others... The National Marine Fisheries Service requests $46,640 for increased rental payments for the following:		0	154

Lease costs for NMFS Southeast Fisheries Center's Charleston Laboratory, SC, increased from an FY 1987 cost of $363,533 to $404,153 in FY 1988, an adjustment of $40,620. This was mandated by the lessor, the state of South Carolina.

Lease costs for NMFS office space at NASA's Stennis Space Center in Mississippi increased from an FY 1988 annual cost of $39,384 to $43,089 in FY 1989, an adjustment of $3,705. This was mandated by NASA in a letter outlining new rates.

Lease costs for docking space for the NMFS vessel CHAPMAN increased from an FY 1987 annual lease of $6,000 to $7,200 in FY 1988, an adjustment of $1,200. This was mandated by the lessor, Alpo Petfoods, Inc. in an amended lease contract.

Lease costs for office and storage space for NMFS Southeast Fisheries Center facility in Freeport, TX, increased from an FY 1987 annual cost of $2,352 to $3,467 in FY 1988, an adjustment of $1,115. This was mandated by the lessor in an amended lease contract.

	Perm Pos.	FTE	Amount

Oceanic and Atmospheric Research is requesting an adjustment to base to cover the increased costs charged by the National Institute of Standards and Technology (NIST) for space at the Boulder site in Boulder, Colorado. The 1989 cost for 41,278 square feet of space was $604,341 and the 1990 cost is projected to be $627,252 for an increase of $23,000.

The National Weather Service requests $54,836 for the following:

Lease costs for space at the Philadelphia International Airport increased from $12,099 in 1988 to $19,119 in 1989 for an adjustment to base of $7,000.

Lease costs for space occupied in the Albany, NY County Airport increased from $23,100 in 1988 to $52,800 in 1989, an adjustment of $29,700.

Lease costs at various municipalities increased from a total cost of $179,097 to $197,233 for an adjustment of $18,136.

The Office of Administration requests $30,000 to cover the increased cost from 1990 to 1991 of space occupied by NOAA in NIST'S Radio Building in Boulder, Colorado.

	Perm Pos.	FTE	Amount
Communications, utilities, and miscellaneous charges................			33

Rental costs of copier equipment in the NMFS Pascagoula, MS facility increased from $4,668 in 1987 to $7,500 in 1988, an adjustment of $2,832.

Telecommunication costs increased to cover a change in the FTS switching stations from Orlando to Miami. New charges were levied against the SE Fisheries Center in Miami because GSA requested Southern Bell Telephone to improve FTS services to users. This change in service, while not increasing the facility's operational efforts, did result in an increase of $8,640 per year?. Prior to 10/16/88, there was no charge for this service.

Based on billings from AT&T, Pacific Bell Telephone, and state teletype contracts, costs for services provided by North Dakota's Weather and Road Information Teletype Emergency Network (WRITTEN) have increased from $28,371 in 1988 to $49,544 in 1989, resulting in an adjustment of $21,173.

	Perm Pos.	FTE	Amount
Printing and Reproduction................			350

The increase of $350,000 was calculated by applying the United States Government Printing Office's estimated 7 percent increase to the 1988 actual cost of $5,000,000 for printing and reproduction.

	Perm Pos.	FTE	Amount
Other Services................			362

	Perm Pos.	FTE	Amount

Program Support costs have increased by $55,752. This consists of: 1) $12,300 for the increase in vendor prices for the distribution of bulk material; 2) $19,700 for the janitorial services contract at Sand Point increasing from $427,226 in 1988 to $447,226 in 1989; 3) $1,400 for basic services provided for the Energy Management and Control System increasing from $27,500 in 1988 to $28,900 in 1989; 4) $200 for the increased cost of plant care at Sand Point increasing from $6,508 in 1988 to $6,748 in 1989; and 5) $22,152 for NOAA Aircraft maintenance costs increasing from $177,270 in 1988 to $199,422 in 1990. These increases are based on actual contract modifications received from vendors.

Automated data processing hardware maintenance costs on the CYBER 205 computer have increased by $91,300.

The U.S. Department of Labor has mandated increases in wage and benefit costs which cover multiple contract weather observers at several airports and other observation sites. Total contract costs in 1988 were $1,743,540 and in 1989 were $1,983,676, for an adjustment of $240,134.

Based upon invoices and modified contracts, costs for the maintenance and repair of the NOAA Weather Radio Transmitter system went from $182,798 in 1988 to $195,643 in 1989, an increase of $12,700.

Working Capital Fund: An additonal $150,000 is required to fund cost increases in the Departmental Working Capital Fund to maintain their current level of operation.

The National Security Decision Directive 201 requires that the implementation and recurring costs for national level telecommunications programs be shared among the organizations. Because NOAA's share went down from $217,686 in 1989 to $29,517 in 1990 a decrease of $188,169 is required.

Supplies and materials...		0	645

The cost of chart paper for National Ocean Service map printing has increased by $73,900. Distribution of maps seven times per year is mandated by the Interagency Cartographic Committee and the Federal Aviation Administration for the management of the national airspace system.

A comparative review of 1988 and 1989 prices of most items in the GSA Supply Catalogs shows that the cost of GSA office supplies and tools has increased by 25.9 percent or $15,300 over a base of $58,968.

Based on invoices received from Page Avjet Corporation, which reflect the 1988 cost of $387,426 increasing in 1989 to $442,772, the price of jet fuel used in NOAA aircraft for base funded flight hours has increased by $55,346.

Based on invoices received from Xerox Corporation, the cost of xerographic paper has increased by $6,000 from a 1988 cost of $20,408 to a 1989 cost of $26,387.

Manufacturing companies listings of identical types, quantities, and revised prices indicate that the cost of reconditioning meteorological sensing and telemetry instruments and supplies (radiosondes) utilized by the National Weather Service for upper air soundings went from $5,985,496 in 1988 to $6,280,435 in 1989, an increase of $294,939.

		Perm Pos.	FTE	Amount
Other Decreases:				
Full year GRH 1990 original sequester amount carried forward into 1991:				
Total GRH Reductions in 1991	- 6,079			-6,079
Sequester applied in 1990 (included in base)	0			
Additional reduction required for full year effect in FY 1991 of 1990 sequester (ATB)	- 6,079			
Civil Service Retirement System (CSRS)			0	-267

The number of employees covered by the Civil Service Retirement System (CSRS) will continue to drop as positions become vacant and are filled by employees who are covered by the Federal Employees' Retirement System. We estimate the percentage of payroll of employees who are covered by the CSRS will drop from 84.3 percent for CSRS in 1990 to 83.2 percent in 1991. This will result in a decrease of 267,143 in the cost of CSRS contributions from $18,960,144 in 1990 to $18,693,001 in 1991.

1991 = (320,965 x 83.2% x 7.0%) =	18,693,002
1990 = (320,965 x 84.3% x 7.0%) =	18,960,145
Total Decrease	-267,143

	Perm Pos.	FTE	Amount
Employee compensation fund			-245

The decrease in the repayment to the Employees' Compensation Fund bill is a result of lower costs in the year ending June 30, 1989 ($3,308,711) than in the year ending June 30, 1988 ($3,553,626).

	Perm Pos.	FTE	Amount
Management savings			-871

Management savings will be achieved through productivity savings.

Buxton Woods (-$1,500)

The Coastal Zone Management Program was established in 1972 to assist coastal states in developing the capability to manage their coastal resources. In 1990, CZM funds include a special designation of $1,500,000 of Section 306 funds for the acquistion of Buxton Woods, North Carolina. Funding is not required for this project in FY 1991 as acquisition will be completed in FY 1990.

St. Paul Trust Fund (-$1,600)

In FY 1989/90, Congressional add-ons were provided for the St. Paul Trust Fund. Congress recognized that the Pribilof Islands' economy will rely completely on this Fund while the harbor project continues. This funding will sustain the Aleut community through FY 1990 and will not be required in FY 1991.

St. George Trust Fund (-$1,100)

In FY 1990, a Congressional add-on was provided for the St. George Trust Fund. This funding will sustain the Aleut community through FY 1990 and will not be required in FY 1991.

Alaska Whale Reimbursement (-$170)

In FY 1990, a Congressional add-on was provided to partially reimburse the North Slope Borough of Alaska for their part in the successful effort to free two California Gray Whales trapped in the ice at Barrow, AK. This funding was intended as a one-time reimbursement and will not be required in FY 1991.

University of New Hampshire Marine Programs (-$2,000)

Congress added $2,000,000 for a grant to the University of New Hampshire for a small research vessel and related equipment, laboratory equipment, and research instruments for the university's marine research and education programs. As these are one-time expenditures, no additional funds will be required in FY 1991.

Marine Electronics Agenda (-$675)

Congress added $675,000 in FY 1990 to complete the third and final phase of the Marine Electronics Agenda project. As this project will be completed in FY 1990, no additional funding is required in FY 1991.

Maintenance of Beaufort, NC Lab (-$200)

Congress added $200,000 in FY 1990 to repair damage to the Beaufort, NC marine fisheries lab caused by Hurricane Hugo. No additional funding is required in FY 1991.

Government Organizations and Employees

5 USC 3109 - Employment of experts and consultants; temporary or intermittent.

"When authorized by an appropriation or other statute, the head of an agency may procure by contract the temporary (not in excess of 1 year) or intermittent services of experts or consultants or an organization thereof, including stenographic reporting services."

5 USC 5901 - Uniform allowances.

This section authorizes annual appropriations to each agency of the Government of the United States, an amount for uniforms, or allowances for uniforms for employees of the agency who are required by regulation or statute to wear a prescribed uniform in the performance of official duties and who are not being furnished with the uniform.

5 USC 5902 - Increase in maximum uniform allowance.

This section increases the amounts for uniform allowances provided for in 5 USC 5901 and specifies that the increased allowances may not be reduced.

Agriculture National Marine Fishing

7 USC 1622 - Agricultural Marketing Act.

"The Secretary ... is directed and authorized: ...
(a) (b) (1) to determine the needs and develop or assist in the development of plans for the proper assembly, processing, transportation, storage, distribution, and handling of agricultural (fish) products.
(c) (h) to inspect, certify, and identify the class, quality, quantity and condition of agricultural (fish) products ...

(f) to conduct and cooperate in consumer education for the more effective utilization and greater consumption of agricultural products (fish)...

(g) to collect and disseminate marketing information... for the purpose of ... bringing about a balance between production and utilization of agricultural (fish) products.

(m) to conduct ... research ... to determine the most efficient ... processes for the handling, storing, preserving, protecting...of agricultural (fish) commodities ..."

Banks and Banking NOAA Corps.

12 USC 1715m - Mortgage Insurance Payments.

This section authorizes payment of Federal Housing Administration (FHA) home mortgage insurance premiums to NOAA Corps Officers.

Commerce and Trade

15 USC 272 - Functions of Secretary.

"The Secretary of Commerce...is authorized to undertake the following functions:

(b) The determination of physical constants...when such data are of great importance to scientific or manufacturing interests and are not to be obtained of sufficient accuracy elsewhere.

In carrying out the functions enumerated in this section, the Secretary is authorized to undertake the following activities and similar ones for which need may arise in the operations of Government agencies, scientific institutions, and industrial enterprises:

(12) the investigation of the conditions which affect the transmission of radio waves from their source to a receiver;

(19) the compilation and publication of general scientific and technical data resulting from the performance of the functions specified herein or from other sources when such data are of importance to scientific or manufacturing interests or to the general public, and are not available elsewhere, including demonstration of the results... by exhibits or otherwise as may be deemed most effective."

Weather Modification P.L. 99-272

15 USC 313 - Duties of Secretary of Commerce.

"The Secretary of Commerce...shall have charge of the forecasting of weather,...issue of storm warnings,...weather and flood signals,... gauging and reporting of rivers,...collection and transmission of marine intelligence...,...reporting of temperature and rainfall conditions..., the display of frost and cold-wave signals, the distribution of meteorological information..., and the taking of such meteorological observations as may be necessary to establish and record the climatic conditions of the United States, or as are essential for the proper execution of the foregoing duties."

15 U.S.C. 313a - Duties of Secretary of Commerce.

"... The Secretary of Commerce shall ... take such actions as may be necessary in the development of an international basic meteorological reporting network in the Arctic region of the Western Hemisphere..."

15 USC 313nt - Study of Thunderstorms and Atmospheric Disturbances; Reports; Expenditures; Cooperation of Other Departments.

"...the Secretary of Commerce is authorized and directed to study fully and thoroughly the internal structure of thunderstorms, hurricanes, cyclones, and other severe atmospheric disturbances,... with a view to establishing methods by which the characteristics of particular thunderstorms may be forecast and methods by which the characteristics of such storms may be determined on visual observation from outside of the immediate thunderstorm area."

15 USC 330b - Duties of Secretary - Records, maintenance, summaries, publication.

"(a) The Secretary shall maintain a record of weather modification activities, including attempts, which take place in the United States and shall publish summaries thereof from time to time as he determines."

Weather Modification P.L. 99-272

15 USC 713c-3 - Saltonstall - Kennedy Act.

This section provides for a national program to promote the free flow of domestically produced fishery products by conducting fishery educational, technological and biological related research and marketing pertaining to American fisheries.

15 USC 713c-3(b) - Saltonstall -Kennedy Act.

There shall be deposited in the fund moneys transferred to the fund under the Saltonstall Kennedy Act.

15 USC 1511(c) NOAA Estuarine Programs Office

... The Estuarine Programs Office shall develop, coordinate, and implement the estuarine activities of the administration with the activities of other Federal and State agencies. There are authorized to be appropriated to the Administration not to exceed $560,000 for fiscal year 1989, and $600,000 for fiscal year 1990.

15 USC 1514 - Basic authority for performance of certain functions and activities of Department.

"Appropriations are authorized for the following activities of the Department of Commerce:

(a) furnishing to employees...and their dependents, in Alaska and other points outside the continental United States, free emergency medical services...and supplies;

(b) ...purchasing, transporting, storing, and distributing food and other subsistence supplies for resale to employees...and their dependents, in Alaska and other points outside the continental United States at a reasonable value...; Provided, That a report of such transaction shall be made to Congress annually showing the total expenditures made for such supplies and the total proceeds from such resales;

(c) ...establishment, maintenance, and operation of messing facilities, by contract or otherwise, in Alaska and other points outside the continental United States..., such service to be furnished to employees...and their dependents,...

(d) reimbursement...of officers or employees in or under the Department...for food, clothing, medicines, and other supplies furnished by them in emergencies for the temporary relief of dislocated persons in remote localities;

(e) providing motion-picture equipment and film for recreation of crews of vessels..., for...employees in remote localities..., and for training purposes;

(f) erecting, altering, repairing, equipping, furnishing, and maintaining...such living quarters and facilities as may be necessary to carry out its authorized work at remote localities not on foreign soil where such living and working accommodations are not otherwise available."

National Climate Program Act P.L. 100-685

15 USC 2904 - National climate program.

"The Secretary (of Commerce) shall establish within the Department of Commerce a National Climate program office...The office shall be the lead entity responsible for administering the Program. The program shall include, but not be limited to, the following elements:

(1) assessments of the effect of climate on the natural environment, agricultural production, energy supply and demand, land and water resources, transportation, human health and national security.
(2) basic and applied research to improve understanding of climate processes,...
(3) methods for improving climate forecasts...
(4) global data collection, and monitoring and analysis activities...
(5) systems for the management and...dissemination of climatological data, information and assessments...
(6) measures for increasing international cooperation in climate research, monitoring, analysis and data dissemination;
(7) mechanisms for intergovernmental climate-related studies and services...
(8) experimental climate forecast centers,...
(9) a preliminary 5-year plan,...a final 5-year plan to be submitted to the Congress...that shall be revised and extended biennially."

15 USC 2906 - Annual report.

"The Secretary shall prepare and submit to the President and the authorizing committees of the Congress, not later than January 30 of each year, a report on the activities conducted pursuant to this Act during the preceding fiscal year..."

National Aeronautics and Space Administration Authorization Act 1989 P.L. 100-685.

15 USC 2908 - Authorization for appropriations.

"...there are authorized to be appropriated to the Secretary,...not to exceed $51,000,000 for the fiscal year ending September 30, 1989, of which amount not less than $3,238,000 shall be made directly available to the National Climate Program Office..." Authorizing legislation is proposed to extend in FY 1989.

15 USC 4211 - Land Remote-Sensing Commercialization Act of 1986.

"The Secretary shall be responsible for (1) the Landsat system, including the orbit, operations, and disposition of Landsat 1,2,3,4, and 5; and (2) provision of data to foreign ground stations under the terms of agreement between the United States Government and nations that operate such ground stations which are in force on the date of commencement of the contract awarded pursuant to this title." The word "Secretary" refers to the Secretary of Commerce.

15 USC 4278 - Authorization of Appropriations.

"There are authorized to be appropriated to the Secretary $383,000,000 for fiscal year 1989

Conservation

16 USC 661 - Declaration of purpose; cooperation of agencies; surveys and investigations; donations.

"...the Secretary of Commerce is authorized (1) to provide assistance to, and cooperate with, Federal, State, and public or private agencies and organizations in the development, protection, rearing, and stocking of all species of wildlife, resources thereof, and their habitat, in controlling losses of the same from disease or other causes, in minimizing damages from overabundant species, in providing public shooting and fishing areas, including easements across public lands for access thereto, and in carrying out other measures necessary to effectuate the purposes of said sections; (2) to make surveys and investigations of the wildlife of the public domain, including lands and waters or interests therein acquired or controlled by any agency of the United States; and (3) to accept donations of land and contributions of funds in furtherance of the purposes of said sections."

16 USC 664 - Administration; rules and regulations; availability of lands to State agencies.

"Such areas as are made available to the Secretary...shall be administered by him directly or in accordance with cooperative agreements entered into pursuant to the provisions of section 661 of this title and in accordance with such rules and regulations for the conservation, maintenance, and management of wildlife,..., as may be adopted by the Secretary...: Provided, That such rules and regulations shall not be inconsistent with the laws for the protection of fish and game of the States in which such area is situated:...,."

16 USC 665 - Investigations as to effect of sewage, industrial wastes; reports.

"The Secretary..., is authorized to make such investigations as he deems necessary to determine the effects of domestic sewage, mine, petroleum, and industrial wastes, erosion silt, and other polluting substances on wildlife, and to make reports to the Congress concerning such investigations and of recommendations for alleviating dangerous and undesirable effects of such pollution. These investigations shall include (1) the determination of standards of water quality for the maintenance of wildlife; (2) the study of methods of abating and preventing pollution,...; and (3) the collation and distribution of data on the progress and results of such investigations for the use of Federal, State, municipal, and private agencies, individuals, organizations, or enterprises."

Lacey Act Amendments P.L. 100-653

16 USC 742c Any Funds received in the Fisheries Loan Fund after September 30, 1986, shall be covered into the Treasury as miscellaneous receipts.

16 USC 742d - Investigations; preparation and dissemination of information; reports.

"The Secretary shall conduct...investigations, prepare and disseminate information, and make periodic reports to the public, to the President, and to Congress, with respect to the following matters:

(1) the production and flow to market of fish and fishery products...;
(2) the availability...of the biological requirements of the fish and wildlife resources;
(3) the competitive economic position of the various fish and fishery products,...;
(4) the collection and dissemination of statistics on commercial and sport fishing;
(6) the improvement of production and marketing practices...;
(7) any other matters which in the judgment of the Secretary are of public interest in connection with any phases of fish and wildlife operations."

16 USC 742f - Policies, procedures, and recommendations.

"(a) The Secretary..., shall consider and determine the policies and procedures that are necessary and desirable in carrying out...the laws relating to fish and wildlife. The Secretary,..., shall -

(1) develop and recommend measures which are appropriate to assure the maximum sustainable production of fish and fishery products...;

(2) study the economic condition of the industry, and...make such recommendations to the President and the Congress as he deems appropriate to aid in stabilizing the domestic fisheries;

(3) develop and recommend special promotional and informational activities with a view to stimulating the consumption of fishery products whenever he determines that there is a prospective or actual surplus of such products;

(4) take such steps as may be required for the development, advancement, management, conservation, and protection of the fisheries resources; and

(5) take such steps as may be required for the development, management, advancement, conservation, and protection of wildlife resources through research, acquisition of refuge lands, development of existing facilities, and other means."

16 USC 742g - International Affairs.

"The Secretary shall cooperate...with the Secretary of State in providing representation at all meetings ... relating to fish and wildlife in which ... the United States and foreign countries participate."

16 USC 744 - Investigations; fish propagation; annual statement of expenditures; investigations of damages by predacious fishes; executive assistance.

"The Secretary...shall prosecute investigations and inquiries..., with the view of ascertaining whether any and what diminution in the number of the food fishes of the coast and lakes of the United States has taken place;...what causes the same...;...whether any and what protective, prohibitory, or precautionary measures should be adopted...; and he shall submit annually to Congress...a detailed statement of expenditures...and he is authorized...to conduct investigations... for the purpose of ameliorating the damage wrought...by dogfish and other predacious fishes and aquatic animals."

16 USC 745 - Powers of Secretary.

"The Secretary...may take or cause to be taken at all times, in the waters of the seacoast of the United States,..., such fish or specimens thereof as may in his judgment, from time to time, be needful or proper for the conduct of his duties, any law, custom, or usage of any State to the contrary notwithstanding."

16 USC 753a - Cooperative research and training programs for fish and wildlife resources.

"For the purpose of developing adequate, coordinated, cooperative research and training programs..., the Secretary...is authorized...to enter into cooperative agreements with colleges and universities, with game and fish departments of the several States, and with nonprofit organizations relating to cooperative research units."

16 USC 755 - Salmon cultural stations; establishment; expenditure of funds.

"The Secretary...is authorized and directed to establish one or more salmon cultural stations in the Columbia River Basin in each of the States of Oregon, Washington, and Idaho."

16 USC 756 - Investigations, surveys, and experiments; construction and installation of conservation devices, etc.

"The Secretary...is further authorized and directed (1) to conduct such investigations...as may be necessary...of the fishery resources of the Columbia River and its tributaries; (2) to construct and install devices...for the improvement of feeding and spawning conditions..., for the protection of migratory fish from irrigation projects,...facilitating free migration of fish...and (3) to perform all other activities necessary for the conservation of fish in the Columbia River Basin in accordance with law."

Anadromous Fish Conservation Act Authorization P.L. 101-162

16 USC 757a - Anadromous and Great Lakes fisheries.

(a) Conservation, development, and enhancement; cooperative agreements with States and other non-Federal interests; terms and conditions; Federal and non-Federal costs.

"For the purpose of conserving, developing, and enhancing within the several States the anadromous fishery resources of the Nation... the Secretary...is authorized to enter into cooperative agreements with one or more States, acting jointly or severally, that are concerned with the development, conservation, and enhancement of such fish, and, whenever he deems it appropriate, with other non-Federal interests."

16 USC 757b - Anadromous and Great Lakes Fisheries; investigations, surveys, and research; stream clearance activities; conservation devices and structures; fish hatcheries; studies, recommendations, and reports to States, Congress, and Federal water resources construction agencies; water resources projects; property; acquisition, exchanges, cash equalization payments, donations, administration, and title.

"The Secretary, in accordance with any agreements entered into pursuant to section 757a(a) of this title, is authorized (1) to conduct such investigations,engineering and biological surveys, and research as may be desirable to carry out the program; (2) to carry out stream clearance activities; (3) to construct, install, maintain, and operate devices and structures for the improvement of feeding and spawning conditions,...(4) to construct, operate, and maintain fish hatcheries wherever necessary to accomplish the purposes of sections 757a to 757f of this title."

16 USC 757d - Anadromous and Great Lakes fisheries

This section authorizes funds for conservation, development and enhancement of anadromous fishery resources of the nation: $7,702,500 for fiscal year 1987, $7,920,000 for fiscal year 1988, $8,152,500 for fiscal year 1989.

16 USC 758a - Exploration, investigation, development, and maintenance of fishing resources and industry of Pacific Ocean; conduct of explorations and related work.

"The Secretary..., is authorized and directed to conduct such fishing explorations and such necessary related work as oceanographical, biological, technological, statistical, and economic studies to insure maximum development and utilization of the high seas fishery resources of the United States and its island possessions in the tropical and subtropical Pacific Ocean..."

16 USC 760a - Atlantic Coast fish study for development and protection of fish resources.

"The Secretary...is directed to undertake a comprehensive and continuing study of species of fish of the Atlantic Coast, including bays, sounds, and tributaries, for the purpose of recommending... measures for the development and protection of such resources and their wisest utilization..."

16 USC 760d - Grants for education and training of personnel in the field of commercial fishing; apportionment; authorization of appropriations; regulations.

"(a) The Secretary...is authorized to make grants, out of funds appropriated for the purposes of this section, to public and non-profit private universities and colleges in the several States and Territories of the United States for such purposes as may be necessary to promote the education and training of professionally trained personnel (including scientists, technicians, and teachers) needed in the field of commercial fishing."

Atlantic Striped Bass Conservation Act P.L. 100-589

16 USC 760e - Study of migratory game fish; waters; research; purpose.

"The Secretary...is directed to undertake a comprehensive continuing study of the migratory marine fish of interest to recreational fishermen...The study shall include...research on migrations, identity of stocks, growth rates,...for the purpose of developing wise conservation policies and constructive management activities."

16 USC 760f - Authorization to acquire facilities, employ officers and employees, cooperate with State and other agencies, and to publish results.

"...the Secretary is authorized (1) to acquire lands, construct ...buildings,...acquire equipment...employ...officers and employees... (2)...contract with State and other institutions... (3) make public the results of...research pursuant to section 760e..."

16 USC 760g - Authorization of appropriations.

"There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of sections 760e to 760g for fiscal years 1988 through 1991." Legislation limits appropriations to $2,700,000 in any fiscal year.

16 USC 760h - Shellfisheries research center; establishment; purpose.

"The Secretary...is authorized and directed to construct at Milford, Connecticut, a research center for shell fisheries production and for such purpose acquire such real property as may be necessary. Such research center shall consist of research facilities, a pilot hatchery including rearing tanks and ponds, and a training school, and shall be used for the conduct of basic research on the physiology and ecology of commercial shellfish, the development of hatchery methods for cultivation of mollusks, including the development of principles that can be applied to the utilization of artificial and natural salt water ponds for shellfish culture, and to train persons in the most advanced methods of shellfish culture."

16 USC 777 - Cooperation between Federal government and State fish and game departments; conditions on expenditure of funds.

"The Secretary...is authorized and directed to cooperate with the States through their respective State fish and game departments in fish restoration and management projects as hereinafter set forth:..."

16 USC 778 - Establishment of experiment stations; purpose of research.

"The Secretary...is authorized and directed to establish an experiment station or stations for the purpose of carrying on a program of research and experimentation-

(1) to determine species of fish most suitable for culture on a commercial basis in shallow reservoirs and flooded rice lands;

(2) to determine methods for production of fingerling fishes for stocking in commercial reservoirs;

(3) to develop methods for the control of parasites and diseases of brood fishes and of fingerlings prior to stocking;

(4) to develop economical methods for raising the more desirable species of fishes to a marketable size;

(5) to determine, in cooperation with the Department of Agriculture, the effects of fish-rice rotations, including crops other than rice commonly grown on rice farms, upon both the fish and other crops; and

(6) to develop suitable methods for harvesting the fish crop and preparing it for marketing, including a study of sport fishing as a means of such harvest."

Marine Mammal Protection Act P.L. 99-659 Amendment

16 USC 916j - Administration of enforcement provisions.

"(a) The Secretary...is authorized and directed to administer and enforce all of the provisions of this chapter and regulations issued pursuant thereto and all of the provisions of the convention and of the regulations of the Commission, except to the extent otherwise provided for in this chapter, in the convention, or in the regulations of the Commission." (in re: Chapter 14 - Regulation of Whaling)

The word "convention" refers to the International Convention for the Regulation of Whaling. The word "Commission" refers to the International Whaling Commission.

16 USC 959 - Enforcement of chapter.

(b) Federal law enforcement agents.

"Enforcement of the provisions of this chapter and the regulations issued pursuant thereto shall be the joint responsibility of the United States Coast Guard, the United States Department of Commerce, and the United States Bureau of Customs." (In re: Chapter 16 - Tuna Conventions)

16 USC 971h - Atlantic Tunas Convention Act of 1975

This section authorizes funds for 1986, 1987, 1988 and 1989 for a program for the conservation of the Atlantic tunas in support of recommendations made by the International Commission for the Conservation of Atlantic Tunas.

16 USC 1027 - Enforcement; boarding and inspecting of vessels; detention of persons and vessels; enforcement officers as witnesses.

"(a) The provisions of the Convention and this chapter relating to abstention from fishing in certain areas by the nationals and vessels of one or more of the contracting parties shall be enforced by the Coast Guard in cooperation with the Fish and Wildlife Service and the Bureau of Customs." (In re: Chapter 19 - North Pacific Fisheries)

The word "Convention" refers to the International Convention for the High Seas Fisheries of the North Pacific Ocean. The functions referred to were transferred from the Fish and Wildlife Service to NOAA by Reorganization Plan No. 4 of 1970.

16 USC 1222 - General study and inventory of estuaries and their natural resources.

(a) Estuaries included; considerations; other applicable studies.

"The Secretary of Commerce,..., shall conduct directly or by contract a study and inventory of the Nation's estuaries, including without limitation coastal marshlands, bays, sounds, seaward areas, lagoons, and land and waters of the Great Lakes. For the purpose of this study, the Secretary shall consider, among other matters, (1) their wildlife and recreational potential, their ecology, their value to the marine, anadromous, and shellfisheries and their esthetic value, (2) their importance to navigation, their value for flood, hurricane, and erosion control, their mineral value, and the value of submerged lands underlying the waters of the estuaries, and (3) the value of such areas for more intensive development for economic use as part of urban developments and for commercial and industrial developments."

16 USC 1371 Marine Mammal Protection Act of 1988 P.L. 100-711.

"The Secretary ... is authorized and directed ... to waive the requirements of this section so as to allow the taking or importing of any marine mammal product ... "

16 USC 1377 - Enforcement.

(a) Utilization of personnel.

"Except as otherwise provided in this subchapter, the Secretary shall enforce the provisions of this subchapter. The Secretary may utilize, by agreement, the personnel, services, and facilities of any other Federal agency for purposes of enforcing this subchapter." (In re: Chapter 31 - Marine Mammal Protection)

16 USC 1380 - Marine mammal research grants.

"(a) The Secretary is authorized to make grants, or to provide financial assistance in such other form as he deems appropriate, to any Federal or State agency, public or private institution, or other person for the purpose of assisting such agency, institution, or person to undertake research in subjects which are relevant to the protection and conservation of marine mammals, and shall require the government of any intermediary nation from which yellow fin tuna or tuna products will be exported to the United States to certify and provide reasonable proof that the products are banned under the section for as long as the ban is in effect.

16 USC 1381 - Commercial fisheries gear development.

(a) Research and development program.

"The Secretary of the department in which the National Oceanic and Atmospheric Administration is operating...is hereby authorized and directed to immediately undertake a program of research and development for the purpose of devising improved fishing methods and gear so as to reduce to the maximum extent practicable the incidental taking of marine mammals in connection with commercial fishing."

16 USC 1384 - Authorization of appropriations - P.L. 100-711.

"(a) There are authorized to be appropriated...$12,250,000 for fiscal year 1989, $12,740,000 for fiscal year 1990, $13,250,000 for fiscal year 1991, $13,780,000 for fiscal year 1992, $14,331,000 for fiscal year 1993.

Coastal Zone Management Reauthorization Act of 1985 P.L. 99-272

16 USC 1432 - Designation of sanctuaries.

(a) Secretary of Commerce; consultation; proposed designations.

"The Secretary,..., may designate as marine sanctuaries those areas of the ocean waters, as far seaward as the outer edge of the Continental Shelf..., of other coastal waters where the tide ebbs and flows, or of the Great Lakes and their connecting waters, which he determines necessary for the purpose of preserving or restoring such areas for their conservation, recreational, ecological, or esthetic values."

16 USC 1452 - Administrative grants.

(a) "The Secretary may make grants to any coastal state the purpose of administering that state's management program..."

16 USC 1456a - Coastal energy impact program.

(b) (1) "The Secretary shall make grants annually to coastal states, in accordance with the provisions of this subsection."

16 USC 1461 - National Estuarine Reserve Research System

"(a) Establishment of the system..."

"(b) ...the Secretary may designate an estuarine area as a national estuarine reserve if (1) the Governor of the coastal State ... nominates the area for that designation; and (2) the Secretary finds that (A) the area is a representative estuarine ecosystem that is suitable ...; (B) the law of the coastal State provides long-term protection for reserve resources ...; (C) designation of the area as a reserve will serve to enhance public awareness...; and (D) the coastal State... has complied with the requirements of any regulations issued by the Secretary..."

"(c) ... The Secretary shall develop guidelines for the conduct of research within the System ..."

"(d) ... The Secretary shall take such action as is necessary to promote and coordinate the use of the System for research purposes..."

"(e) ... (1) The Secretary may ... make grants (A) to a coastal State (i) for purposes of acquiring ... lands and waters ..., (ii) for purposes of operating or managing a national estuarine reserve and constructing appropriate reserve facilities, or (iii) for purposes of conducting educational or interpretive activities; and (B) to any coastal State or public or private person for purposes of supporting research and monitoring within a national estuarine reserve ..."

"(3)(A) The amount of the financial assistance provided ... with respect to the acquisition of land or waters ... for any one national estuarine reserve may not exceed an amount equal to 50 per centum of the costs of the lands, waters, and interests therein or $4,000,000, whichever amount is less. (B) The amount of the financial assistance provided under paragraph (1)(A)(ii) and (iii) and paragraph (1)(B) of subsection (e) may not exceed 50 percentum of the costs incurred to achieve the purposes described in those paragraphs ..."

"(f)...The Secretary shall periodically evaluate the operation and management of each national estuarine reserve ... The Secretary may withdraw the designation of an estuarine area as a national estuarine reserve..."

16 USC 1464(a) - Authorization of appropriations

"(a) There are authorized to be appropriated

(1) such sums, $37,900,000 for the fiscal year ending September 30, 1988, $38,800,000 for the fiscal year ending September 30, 1989, and $40,600,000 for the fiscal year ending September 30, 1990, as may be necessary for grants under Sections 306 and 306A, to remain available until expended;

(2) such sums, not to exceed $1,500,000 for each of the fiscal years occurring during the period beginning October 1, 1986, and ending September 30, 1990, as may be necessary for grants under Section 309, to remain available until expended;

(3) such sums, not to exceed $4,500,000 for the fiscal year ending September 30, 1988, $5,000,000 for the fiscal year ending September 30, 1989 and $5,500,000 for the fiscal year ending September 30, 1990, as may be necessary for grants under Section 315, to remain available until expended; and,

(4) such sums, not to exceed $3,300,000 for the fiscal year ending September 30, 1988, $4,000,000 for the fiscal year ending September 30, 1989, and $4,000,000 for the fiscal year 1990, as may be necessary for administrative expenses incident to the administration to this title."

16 USC 1464(a) - Provides that all grants authorized and appropriated thereunder, except for grants authorized under Section 308(b) in 16 USC 1464(a) (3) and sums authorized for administrative expenses incident to the administration of this title in 16 USC 1464(a) (8), are to remain available until expended.

16 USC 1533 - Endangered Species Act P.L. 100-478.

"The Secretary shall by regulation determine whether any species is an endangered ... or threatened species..."

16 USC 1534 - Land acquisition.

"(a) The Secretary shall establish and implement a program to conserve (A) fish... which are listed as endangered species or threatened species ..."

16 USC 1535 - Authorization of appropriations.

"...there are authorized to be appropriated not to exceed... $5,750,000 for fiscal year 1988, $6,250,000 for each of fiscal years 1989 and 1990 and $6,670,000 for each of fiscal years 1991 and 1992.

Magnuson Fishery Conservation and Management Act.

16 USC 1811 - Exclusive Economic Zone P.L. 99-659.

The United States claims and will exercise..., sovereign rights and exclusive fishery management authority over all fish, and all Continental Shelf fishery resources, within the exclusive economic zone... all anadromous species throughout the migratory range of each species beyond the exclusive economic zone... all continental shelf fishery resources beyond the exclusive economic zone.

16 USC 1822(a)(4) - Negotiations.

"The Secretary of State shall, upon the request of and in cooperation with the Secretary, initiate and conduct negotiations for the purpose of entering into international fishery agreements..."

16 USC 1852 - Regional fishery management councils;

"There shall be established,...,eight Regional Fishery Management Councils,..."

16 USC 1852(h).

"Each Council shall.... (1) prepare ... a fishery management plan with respect to each fishery within its geographical area ...; (2) prepare comments on any application for foreign fishing ...; and (3) conduct public hearings ..." and are fairly represented as voting members of the council.

16 USC 1853 - Contents of fishery management plans.

"Any fishery management plan which is prepared by any Council, or by the Secretary, with respect to any fishery, shall - ... (2) contain a description of the fishery,..., any recreational interests in the fishery..., (3) assess and specify the present and probable future condition of..., (4) assess and specify - ..., (5) specify the pertinent data..."

16 USC 1854(e) - Fisheries research.

"The Secretary shall initiate and maintain a comprehensive program of fishery research to carry out and further the purposes, policy, and provisions of this Act. Such program shall be designed to acquire knowledge and information, including statistics, on fishery conservation and management,..."

16 USC 1855 - Staff and administration.

"The Secretary shall provide to each Council such administrative and technical support services as are necessary for the effective functioning of such Council."

16 USC 1861 - Enforcement.

"(a) The provisions of this Act shall be enforced by the Secretary and the Secretary of the department in which the Coast Guard is operating."

"(b) Any officer who is authorized...to enforce the provisions of this Act may...(A) arrest any person, if he has reason to believe that such person has committed an act prohibited...; (B) board, and search or inspect, any fishing vessel which is subject to the provisions of this Act; (C) seize any fishing vessel...used or employed in, the violation of any provisions of this Act; (D) seize any fish...taken or retained in violation of any provisions of this Act; and (E) seizeany other evidence related to any violation..."

16 USC 1882 - Authorization of Appropriations P.L. 99-659.

"There are authorized to be appropriated to the Secretary, for purposes of carrying out the provisions of this Act, not to exceed the following sums: ..,$69,000,000 for the fiscal year ending September 30, 1986; $70,800,000 for the fiscal year ending September 30, 1987; and $72,900,000 for the fiscal year ending September 30, 1988; $75,000,000 for the fiscal year ending September 30, 1989." This authorization applies to 16 USC 1811-1861.

16 USC 3633(c) - Authority and Responsibility.

"...the Secretary shall prepare, as appropriate, all statements, reports, and information required by the Treaty..."

16 USC 3636 - Rulemaking.

"(a) the Secretary,... shall promulgate such regulations as may be necessary to carry out the United States international obligations under the Treaty..."
"(b) the Secretary,... may promulgate regulations applicable to nationals or vessels of the United States..." The word "Treaty" refers to the "Pacific Salmon Treaty Act of 1985"

16 USC 3641 - Authorization of Appropriations.

"There are authorized to be appropriated from time to time such sums as may be necessary for carrying out the purposes and provisions of the Treaty..."

Fish and Seafood Promotion Act of 1986 P.L. 99-659

16 USC 4008 Establishment of Fisheries Promotional Fund.

There is established in the Treasury of the United States a Fisheries Promotional Fund. The Fund shall be available to the extent provided for in appropriation acts.

There are transferred from the fund to the Fisheries Promotion Fund $750,000 in fiscal year 1987, $3,000,000 in each of the fiscal years 1988 and 1989, and $2,000,000 in fiscal year 1990.

Mineral Lands and Mining

30 USC 1412 - Licenses for exploration and permits for commercial recovery.

"...the Administrator shall issue to applicants who are eligible therefor licenses for exploration and permits for commercial recovery." The word "Administrator" refers to the Administrator of NOAA.

30 USC 1419 - Protection of the environment.

"The Administrator shall expend and accelerate the program assessing the effects on the environment from exploration and commercial recovery activities..." "The Administrator also shall conduct a continuing program of ocean research to support environmental assessment activity through the period of exploration and recovery..."

30 USC 1424 - Federal observers.

"Each license and permit issued shall require the licensee or permittee-
(1) to allow the Administrator to place observers aboard vessels used by the licensee or permittee in exploration or commercial recovery activities (A) to monitor such activities, and (B) to report to the administrator a failure to comply with such terms, conditions, and restrictions;
(2) to cooperate in the performance of monitoring functions; and

(3) to monitor the environmental effects of the exploration and commercial recovery activities...and to submit such information as ... necessary and appropriate to assess environmental impacts and to develop and evaluate possible methods of mitigating adverse environmental effects."

30 USC 1428 Reciprocating States.

"(a) DESIGNATION. - The Administrator, in consultation with the Secretary of State and the heads of other appropriate departments and agencies, may designate any foreign nation as a reciprocating state..."

30 USC 1469 Biennial Report.

"(a) SUBMISSION OF REPORTS. - The Administrator shall submit to the Congress-

(1) ... a report on the administration of this Act during the period beginning on the date of enactment of this Act and ending September 30, 1981; and

(2) not later than December 31 of each second year thereafter, a report on the administration of this Act during the two fiscal years preceding the date on which the report is required to be filed.

(b) CONTENTS. - Each report filed pursuant to subsection (a) shall include, but not be limited to ...

(1) Licenses and permits issued, modified, revised, suspended, revoked, relinquished, surrendered, or transferred; denials of licenses and permits; denials of issuance or transfer of licenses and permits; and required suspensions and modifications of activities under licenses and permits.

(2) A description and evaluation of the exploration and commercial recovery activities undertaken, including, but not limited to, information setting forth the quantities of hard mineral resources recovered and the disposition of such resources.

(3) An assessment of the environmental impacts, including description and estimate of any damage caused by any adverse effects on the quality of the environment resulting from such activities.

(4) The number and description of all civil and criminal proceedings, including citations, instituted under this title, and the current status of such proceedings.

(5) Such recommendations as the Administrator deems appropriate for amending this Act to further fulfill its purposes."

30 USC 1470 - Authorization of Appropriations.

"There are authorized to be appropriated to the Administrator, for purposes of carrying out the provisions of titles I and II and this title, ... $1,500,000 for each of the fiscal years ending September 30, 1987, September 30, 1988, and
September 30, 1989."

Navigation and Navigable Waters

33 USC 706 - Department of Commerce; current information; appropriation.

"There is authorized an expenditure as required,..., for the establishment, operation, and maintenance by the Department of Commerce of a network of recording and non-recording precipitation stations, known as the Hydrocilmatic Network, whenever...such service is advisable..."

33 USC 853a-876 - NOAA Corps

These statutory provisions authorize the numerous functions inherent in and necessary for the maintenance of the commissioned officer corps of the National Oceanic and Atmospheric Administration. Included in these provisions are authorities pertaining to the authorized numbers in the respective permanent ranks; 'appointment and promotion of officers; retirement and separation of officers; cooperation with the transfer of officers to military departments; servicemen's and veterans' benefits; and rights, privileges, immunities and benefits of members of the commissioned corps.

Coast and Geodetic Survey

33 USC 883a - Surveys and other activities.

"...the Secretary...is authorized to conduct the following activities:

(1) Hydrographic and topographic surveys;
(2) Tide and current observations;
(3) Geodetic-control surveys;
(4) Field surveys for aeronautical charts;
(5) Geomagnetic, seismological, gravity, and related geophysical measurements and investigations."

33 USC 883b - Dissemination of data; further activities.

"...the Secretary is authorized to conduct the following activities:
(1) Analysis and prediction of tide and current data;
(2) Processing and publication of data...;
(3) Compilation and printing of aeronautical charts...;
(4) Compilation and printing of nautical charts...;
(5) Distribution of aeronautical charts...;
(6) Distribution of nautical charts..."

33 USC 883c - Geomagnetic data; collection; correlation, and dissemination.

"To provide for the orderly collection of geomagnetic data...the Secretary is authorized to collect, correlate, and disseminate such data."

33 USC 883d - Improvement of methods, instruments, and equipments; investigations and research.

"...the Secretary is authorized to conduct developmental work for the improvement of surveying and cartographic methods, instruments, and equipments; and to conduct investigations and research in geophysical sciences..."

33 USC 883e - Cooperative Agreements for Mapping and Charting Surveys.

"The Secretary of Commerce is authorized to establish the terms of any cooperative agreement entered into ... including the amount of funds to be received ... which the Secretary determines represents the amount of benefits derived ... from the cooperative agreement."

33 USC 883f - Contracts with qualified organizations.

"The Secretary is authorized to contract with qualified organizations for the performance of any part of the authorized functions of the Coast and Geodetic Survey..."

33 USC 883h - Employment of public vessels.

"The President is authorized to cause to be employed such of the public vessels as he deems it expedient to employ, and to give such instructions for regulating their conduct as he deems proper in order to carry out the provisions of sections 883a to 883i of this title."

33 USC 883i - Authorization of Appropriations.

"There are authorized to be appropriated such funds as may be necessary to acquire, construct, maintain, and operate ships, stations, equipment, and facilities and for such other expenditures, including personal services at the seat of government and elsewhere and including the erection of temporary observatory buildings and lease of sites therefore as may be necessary..."

33 USC 1121 - National Sea Grant College Program Act.

"The Sea Grant Act authorizes the awarding of grants and contracts to initiate and support programs at Sea Grant colleges and other institutions for research, education, and advisory services in any field related to the conservation and development of marine resources."

The authorization for appropriation expires at the end of FY 1990.

33 USC 1130 Marine Affairs and Resource Management Improvement Grants.

The Under Secretary may make grants and enter into contracts to carry out the strategic research program. A grant or contract may cover up to 100 percent of the cost of the research. Within 1 year after the effective date of the Marine Science Technology, and Policy Development Act of 1987, and every 3 years after that date, the Under Secretary shall develop and publish in the Federal Register, a Sea Grant Strategic research plan for the next 3 years.

33 USC 1131 Authorization of Appropriations.

There is authorized to be appropriated not to exceed $41,500,000 for fiscal year 1988, not to exceed $50,500,000 for fiscal year 1989, not to exceed $51,000,000, for fiscal year 1990.

Marine Protection, Research and Sanctuaries Act Amendments P.L. 99-272

33 USC 1441 - Monitoring and research program; reports to Congress.

"The Secretary of Commerce, in coordination with the Secretary of the Department in which the Coast Guard is operating and with the Administrator shall, initiate a comprehensive and continuing program of monitoring and research regarding the effects of the dumping of material into ocean waters or other coastal waters where the tide ebbs and flows or into the Great Lakes or their connecting waters.

33 USC 1442 - Research program respecting possible long-range effects of pollution, overfishing, and man-induced changes of ocean ecosystems.

(a) Secretary of Commerce.

"The Secretary...,...shall,..., initiate a comprehensive and continuing program of research with respect to the possible long-range effects of pollution, overfishing, and man-induced changes of ocean ecosystems."

33 USC 1443 - Cooperation with public authorities, agencies, and institutions, private agencies and institutions, and individuals.

"The Secretary...shall conduct and encourage, cooperate with, and render financial and other assistance to appropriate public... authorities, agencies, and institutions, private agencies and institutions, and individuals in the conduct of, and to promote the coordination of, research, investigations, experiments, training, demonstrations, surveys, and studies for the purpose of determining means of minimizing or ending all dumping of materials within five years of the effective date of this Act."

33 USC 1444 - Authorization of appropriations.

"There are authorized to be appropriated...not to exceed $11,114,000 for fiscal year 1989.

National Ocean Pollution Planning Act of 1978 P.L. 100-636

33 USC 1701 - National Ocean Pollution Program Office and National Ocean Pollution Policy Board.

is further amended to establish the National Ocean Pollution Policy Board.

33 USC 1703 - Comprehensive Federal Plan Relating to Ocean Pollution.

"The Under Secretary...shall establish within the administration the National Ocean Pollution Program Office. The Office shall make general research on marine ecosystems including the Great Lakes. The Chesapeake Bay, Puget Sound, and other Estuaries of National significance.

33 USC 1704 - Comprehensive Ocean Pollution Program in the Administration.

"The Under Secretary shall establish within the Administration a comprehensive, coordinated and effective ocean pollution research and development and monitoring program."

33 USC 1705 - Grants and contracts.

"The Under Secretary may provide financial assistance...of grants or contracts for research and development and monitoring projects or activities...to meet priorities set forth in the Plan..."

33 USC 1707 - Dissemination of Information.

Amended by adding: "The Under Secretary shall ensure that the findings and information regarding ocean pollution research activities associated with the Great Lakes ... be disseminated in a timely manner and in useful forms to ... the Federal Government, State governments, and other persons with an interest ..."

33 USC 1709 - Authorization of Appropriations.

"There are authorized to be appropriated to the Under Secretary for the purposes of carrying out this Act not to exceed $3,750,000 for the fiscal year 1989 not to exceed $4,000,000 for fiscal year 1990.

Pay and Allowances for Members of Uniformed Services

37 USC 101 et seq. - Pay and Allowances for Members of the Uniformed Services.

Authorizes pay and allowances for members of the NOAA Commissioned Officers Corps.

Public Health and Welfare

42 USC 1891 - Authorization to make grants.

"The head of each agency of the Federal Government, authorized to enter into contracts for basic scientific research at nonprofit institutions of higher education, or at nonprofit organizations whose primary purpose is the conduct of scientific research, is authorized, where it is deemed to be in furtherance of the objectives of the agency, to make grants...for the support of such...research."

42 USC 7453 - The Clean Air Act.

"(f) (2) Members of the Coordinating Committee shall include the appropriate official responsible for the relevant research efforts of ...
(A) The National Oceanic and Atmospheric Administration ...
(f) (3) The Coordinating Committee shall review and comment on plans for, and the execution and results of, pertinent research and studies..."

42 USC 7454 - The Clean Air Act.

"(a) The Administrator of the National Oceanic and Atmospheric Administration shall establish a continuing program of research and monitoring of the stratosphere for the purposes of early detection of changes in the stratospheric and climatic effects of such changes..."

42 USC 8902 - Interagency Task Force; Comprehensive Program.

"(a) There is hereby established a comprehensive ten-year program to carry out the provisions of this subtitle; and to implement this program there shall be formed an Acid Precipitation Task Force (hereafter in this subtitle referred to as the "Task Force"), of which the Secretary of Agriculture, the Administrator of the Environmental Protection Agency, and the Administrator of the National Oceanic and Atmospheric Administration shall be joint chairmen."

"(c) The Administrator of the National Oceanic and Atmospheric Administration shall serve as the director of the research program established by this subtitle."

42 USC 8903 - Comprehensive Research Plan.

"(a) The Task Force shall prepare a comprehensive research plan for the ten-year program (hereafter in this subtitle referred to as the "comprehensive plan"), setting forth a coordinated program (1) to identify the causes and effects of acid precipitation and (2) to identify actions to limit or ameliorate the harmful effects of acid precipitation."

"(c) The comprehensive plan--

(1) shall be submitted in draft form to the Congress, and for public review, within six months after the date of the enactment of this Act;

(2) shall be available for public comment for a period of sixty days after its submission in draft form under paragraph (1);

(3) shall be submitted in final form, incorporating such needed revisions as arise from comments received during the review period, to the President and the Congress within forty-five days after the close of the period allowed for comments on the draft comprehensive plan under paragraph (2); and

(4) shall constitute the basis on which requests for authorizations and appropriations are to be made for the nine fiscal years following the fiscal year in which the comprehensive plan is submitted in final form under paragraph (3)."

42 USC 8904 - Implementation of the Comprehensive Plan.

"(a) The comprehensive plan shall be carried out during the nine fiscal years following the fiscal year in which the comprehensive plan is submitted in its final form under section 704(c)(3); and..."

42 USC 8905(e) - Authorization of Appropriations.

"(a) For the purpose of establishing the Task Force and developing the comprehensive plan under section 704 there is authorized to be appropriated to the National Oceanic and Atmospheric Administration for fiscal year 1981 the sum of $5,000,000, to remain available until expended.

(b) Authorizations of appropropriations for the nine fiscal years following the fiscal year in which the comprehensive plan is submitted in final form under section 704(c)(3), for purposes of carrying out the comprehensive ten-year program established by section 703(a) and implementing the comprehensive plan under sections 704 and 705, shall be provided on an annual basis in authorization Acts hereafter enacted; but the total sum of dollars authorized for such purposes for such nine fiscal years shall not exceed $45,000,000 except as may be specifically provided by reference to this paragraph in the authorization Acts involved."

Public Lands

43 USC 1347(e) - Safety Regulations.

"The Secretary... shall conduct studies of underwater diving techniques and equipment suitable for protection of human safety and improvement of diver performance. Such studies shall include, but need not be limited to, decompression and excursion table development and improvement and all aspects of diver physiological restraints and protective gear for exposure to hostile environments."

Public Printing and Documents

44 USC 1307 - Sale and Distribution of NOAA Nautical and Aeronautical Products.

"All nautical and aeronautical products created or published ... shall be sold at ... prices ... the Secretary of Commerce shall establish annually ... so as to recover all costs attributable to data base management, compilation, printing, and distribution of such products."

69 App USC 1153 - Training of foreign nationals in aeronautical and related subjects.

"Subject to the concurrence of the Secretary of State, the Secretary of Transportation, and the Secretary of Commerce, within their respective fields, are authorized within or outside the United States to train foreign nationals directly, or in conjunction with any other United States Government agency, or through any United States public or private agency..., or through any international organization, in aeronautical and related subjects essential to the orderly and safe operation of civil aircraft."

Justification of Program and Performance

Activity: National Ocean Service
Subactivity: Mapping, Charting, and Geodesy

Goals and Objectives

Goals: To provide accurate and timely marine, coastal, and aeronautical data in various map and chart formats; to increase the efficiency and safety of marine and air transportation, offshore engineering, exploration of the Exclusive Economic Zone (EEZ), coastal zone management, military operations, and recreational activities; to provide the National Geodetic Reference Systems needed for accurate geographic positions, elevations and gravity values for national defense and space activities, mapping and charting, public works, land information management and earth science investigations.

Objectives: The mapping and charting program objectives are to: (1) Conduct hydrographic, photogrammetric and high resolution EEZ surveys; (2) Process data and access information affecting marine and air transportation, maintain current aeronautical and nautical chart data bases, and compile, reproduce and distribute nationwide nautical and aeronautical charts, EEZ and coastal zone maps; (3) Automate cartographic and photogrammetric operations; and (4) Design, develop and evaluate improved data acquisition, processing, cartographic, and dissemination systems, and new digital products. For geodesy, the objectives are to: (1) Incorporate the recent backlog of surveys into the redefined North American Datum (NAD 83) and complete the horizontal network in deficient and unsurveyed areas; (2) Relevel and readjust the North American Vertical Datum (NAVD 88) and complete the vertical network in deficient and unsurveyed areas; (3) Provide accurate geodetic data for crustal motion studies; (4) Transfer geodetic technology to Federal, state, and local governments and the private sector; and (5) Apply Global Positioning System (GPS), Very Long Baseline Interferometry (VLBI), and Satellite Altimetry to improve the measurement and understanding of geodetic parameters and dynamic earth processes such as polar motion, earth rotation, gravity field and the geoid, global sea level and ocean circulation.

Base Program

Mapping and Charting -- Hydrographic surveys provide the basic data for the production of nautical charts. In FY 1991, hydrographic surveys and special investigations of wrecks and obstructions will be conducted using ships and field parties. A total of about 55 surveys will be completed. These surveys will be conducted in high priority areas as identified by the automated Survey Request File (SURF) system. New automated Hydrographic Data Acquisition and Processing Systems (HDAPS), installed aboard the hydrographic survey ships and launches during FY 1989 and FY 1990 should result in continued productivity improvements in FY 1991. Aircraft will be deployed on photogrammetric surveys to support new chart compilations, the revision of existing charts, and the delineation of baseline data for U.S. marine boundaries. EEZ surveys using multibeam equipment will be conducted in high priority areas.

Data from both government and private sources are used to update nautical charts. Approximately 50,000 of these source documents will be evaluated and applicable data plus the survey data will be incorporated into the Nautical Chart System data base. In FY 1991, 380 revised nautical charts will be issued. Digital data will be provided in addition to dissemination of charting data in analog format. Aeronautical charts are compiled from qualified data and disseminated for the National Airspace System in accordance with strict updating schedules set by the Federal Aviation Administration. During FY 1991, 10,341 new and revised aeronautical charts will be maintained. In response to the Presidential proclamation, extending sovereign rights for development of natural resources in the EEZ, 20 high resolution bathymetric maps will be produced.

Efforts will continue to develop the next generation automated nautical charting system and to improve photogrammetric processing with an integrated digital photogrammetric facility. Efforts will continue to automate aeronautical cartography. Although similarities exist between automated efforts in both nautical and aeronautical charting, each has unique requirements which can best be met by somewhat different approaches. These systems incorporate state-of-the-art technology and will increase efficiencies and improve the quality of the output. Rapid advances in computer technology, electronic chart hardware, and portable mass storage media have created a demand for digital chart data. New formats will be designed based on the digital optical disk and other systems.

Legislation will be proposed to permit the Nautical Charting program, as well as other ocean related programs, to be financed from a Harbor Maintenance Trust Fund transfer to the proposed Marine Waterways Trust Fund. The Harbor Maintenance Trust Fund was established by P.L. 99-662, Title XIV and derives its revenue from a user fee on commercial cargo. The proposed legislation will increase the fee to provide the necessary additional revenues to finance these programs. Under this proposal, the Nautical Charting program would be funded by a reimbursement to the OR&F account from the Marine Waterways Trust Fund.

Geodesy - The horizontal surveys backlog will be processed and entered into the National Geodetic Reference Data Base. This process includes surveys performed using GPS technology. This technology will be employed to aid states and local areas in completing the horizontal control network. New NAD 83 coordinates and descriptions will continue to be published and distributed. Releveling will continue for NAVD 88 to correct vertical network deficiencies. Activities have begun in preparation for the final adjustment of the NAVD 88 project. The use of GPS to determine vertical control will continue to be studied.

Crustal motion surveys will be conducted on a cooperative basis for earthquake prone areas, fault zones, emergency fuel storage sites, and locations for geothermal energy development. This task depends on other geodetic projects (NAD 83, NAVD 88, and polar motion) and is carried out using conventional leveling techniques, mobile VLBI equipment, and GPS.

The Geodetic Advisory Service now in operation for 26 states will continue at that level in FY 1991. Other technology transfer programs will continue through regional geodetic coordination and calibration baseline services. The transfer of GPS technology to state and local governments, universities, and the private sector will continue.

NOAA will continue its leadership role in the application of VLBI to geodesy by serving as the operational center for international cooperation; processing data to monitor polar motion, earth rotation; and determining baseline vectors and other parameters that can be applied to geodynamic investigations. Satellite altimetry data will be processed to produce time series of sea level, improved tide models, global surface circulation, wind speed, and wave height. Research will continue in crustal motion, improvements in GPS techniques for high precision static and kinematic surveys.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Aeronautical visual charts, number maintained	182	182	182
Aeronautical instrument charts, number maintained	9,559	9,538	10,159
Nautical charts, number maintained	981	981	981
Nautical charts, number revised	427	380	380
Coast pilots, volumes revised	8	8	8
Photogrammetric shoreline charts revised	45	45	45
Airport obstruction charts, number maintained	837	837	847
Airport obstruction charts, number revised	150	150	180
Kilometers of releveling completed for the NAVD 88 project	3,474	2,500	0
Kilometers of releveling completed to correct network deficiencies	0	700	3,200
NAVD 88 block validation (points)	119,700	44,000	*
Crustal motion network sites surveyed by VLBI	20	20	20
GPS stations occupied	2,200	2,200	2,200

Decreases for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Mapping and Charting	Pos./BA	293	$31,306	293	$31,206	0	-$100
	FTE/Obl.	302		302		0	

A decrease of $100,000 (object class 25.0) is requested for the Great Lakes shoreline mapping plan. As the plan will be completed in FY 1990, no funding is required in FY 1991.

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Geodesy	Pos./BA	218	$18,141	218	$15,728	0	-$2,413
	FTE/Obl.	226		226			

Two decreases totalling $2,413,000 are requested in this line item.

A decrease of $577,000 is requested for the South Carolina Cooperative Geodetic Survey Program. This program was initiated in 1979 as a Congressional add-on (South Carolina Multipurpose Mapping Project). The geodetic work is almost complete and additional mapping needs should be completed by the State. This is a specific State, not Federal, concern which benefits local private companies and should be the funding responsibility of the State or those companies. State personnel have been trained by NOAA to complete the tasks necessary to fulfill their mapping needs.

A decrease of $1,836,000 is requested for the Land Information System for Orleans, Calcasieu, and Jefferson Parishes in Louisiana. The program was initiated as a Congressional add-on in FY 1988 (The Multipurpose Cadaste Project). The work is now underway and can be turned over to the State to fund completion of the project. This project serves no Federal purpose and should be funded by the State which is the direct beneficiary.

Justification of Program and Performance

Activity: National Ocean Service
Subactivity: Observation and Assessment

Goals and Objectives

Goals: Provide timely and accurate marine observations and predictions for safe and efficient operations in the oceans, coastal areas, estuaries and Great Lakes. Provide improved marine data products and services to specific user communities, and develop cooperative efforts with other Federal agencies. Support the Federal responsibility to provide improved observations, collections, national products, warnings and advisories based on oceanographic and marine atmospheric data for use in forecast models. Develop, through monitoring, research and assessment, an understanding of marine and estuarine resources and environments and the changes that result from human activities. Produce a scientific basis for Federal management decisions associated with the protection, development and use of ocean, estuarine and coastal resources.

Objectives: Improve the quality, quantity, geographic coverage and timeliness of oceanic and related atmospheric observations; improve and centralize acquisition and analysis of ocean data to support operational needs and numerical forecast models for both oceanic and coastal areas facilitate state-of-the-art data storage and processing facilities and obtain sufficient ground truth surface observations to support the effective use of satellite-derived ocean observations. Replace existing obsolete water level gauges with state-of-the-art real-time telemetry systems. Describe and predict total circulation in selected estuaries through the use of numerical modeling techniques that minimize field operations. Provide tidal datums for support of nautical charting and for determination of Federal, state and offshore marine boundaries; work with private sector firms to encourage development of products to meet the needs of marine products users. Organize public/private partnerships for developing effective delivery of services at minimum or no cost to the Federal government; provide technical assistance to public and/or private organizations establishing real-time navigation systems for the maritime industry. Develop an operational capability for the analysis of marine and estuarine environmental quality problems; conduct physical, chemical, and biological monitoring at selected sites to describe and predict the environmental quality conditions of coastal and estuarine areas; conduct intercomparison exercises to document laboratory comparability and assure the quality of marine environmental quality measurements; conduct interdisciplinary studies of environmentally-stressed marine ecosystems and estuaries to enhance our abilities to predict the effects of human activities. Provide scientific information during response to spills of oil and hazardous materials and assess long-term environmental damage caused by these spills; cooperate with states to develop natural resources information systems for U.S. coastal wetlands; improve interagency coordination of marine pollution research, development and monitoring programs supported by the Federal Government, including the Great Lakes and estuaries of national significance. Finally, and promote dissemination of data and information pertaining to marine, estuarine and Great Lakes pollution issues.

Base Program

Observation and Prediction -- The Ocean Services Program was established to provide the required infrastructure for access to ocean observations, products, and information. In addition, the Program's mission is to improve the prediction of physical changes in the ocean by: (1) increasing the number and improving the quality of oceanographic and meteorological observations; (2) improving the capacity to analyze, model, and predict ocean processes at the three National Centers --the Navy-NOAA Joint Ice Center in Suitland, MD, the NOAA Ocean Products Center at Camp Springs, MD, and the NOAA Ocean Analysis & Prediction in Monterey, CA; and (3) increasing and improving intra-agency and inter-agency coordination in coastal and global ocean data collection, analysis, and prediction. The Program provides integrated observing networks for the Nation's coastal and global oceans, and develops and implements innovative tools for environmental forecasting. The program's infrastruture provides vital support for: NOAA's Marine Weather activities, Living Marine Resource Management activities, Coastal Ocean Program, Climate & Global Change Program, and Data Management Program. The Ocean Services Program provides information access to a wide range of users, including: industry, commercial fishing, marine transportation, offshore oil & gas; private forecasting and value-added companies; Federal and state resource management agencies; and the research community.

National Water Level Observation -- NOAA operates a national water level observation program that includes long-and short-term stations in the coastal oceans (U.S. coasts, territories, and possessions), and the Great Lakes. The core of the program is the continuously operating National Water Level Observation Network. The program supports: (1) other NOAA activities (nautical charting, tide prediction, tsunami warning, storm surge warning, circulation modeling, tidal and Great lakes datum determinations, monitoring long-term sea level trends, climate and global change); (2) other Federal agencies (Department of Justice for regulatory and marine boundary disputes; Army Corps of Engineers and EPA for coastal construction, permitting, and dredging activities); and (3) state and private concerns (marine boundary, real-time navigation, and oceanographic research projects).

During FY 1991, installation of the Next Generation Water Level Measurement System will continue. Existing systems will be replaced with automated, satellite-telemetered systems. These new systems also include the capability of measuring ancillary meteorological and oceanographic parameters in near real-time. Existing personnel-intensive data processing, analysis and management systems will be replaced by a state-of-the-art data base management and dissemination system.

Annual products include:

Tidal Information with hourly heights, daily high and low tidal heights, monthly and annual mean summaries, harmonic and non-harmonic constants for approximately 150 operating and 6,200 historical locations; tidal datums and bench mark elevations for some 5,000 locations; surface temperature and density data from approximately 75 operating stations; near real-time water level data from 29 stations; and data from 25 new stations equipped with Next Generation Water Level Measurement Systems in the Atlantic and Pacific Oceans to support NOAA's Global and Climate Change Program.

Great Lakes Water Level Information with hourly levels, daily mean levels from 50 operating and 175 historical stations, annual water levels, 7-day telemetered water levels, monthly maximum and minimum levels from the 50 operating stations, annual lake discharge information, monthly flow information and monthly precipitation summaries from over 900 U.S. and Canadian locations; near real-time water level data from 24 stations; and International Great Lakes datum elevations for all locations.

Estuarine Modeling and Prediction -- Application of numerical estuarine circulation models will result in a new suite of circulation products and services and reduce the number of required field observations. Model development and circulation atlases will be completed for Long Island Sound and Charleston Harbor. Circulation measurement projects will begin in the Gulf of Mexico and data for circulation atlases will be obtained in those estuaries. Data for estuarine and coastal regions (current direction and velocity vs. depth, temperature and salinity profiles, water levels, and meteorological data) will be provided to users.

Tide Prediction Tables, published in four volumes. Contains daily high and low water predictions for 6,200 locations one year in advance.
Tidal Current Predictions, published in two volumes. Contains predictions at 56 major ports and 2,600 coastal locations.
Tidal Current Charts and Diagrams for 12 coastal areas.

Special Predictions for NWS and foreign countries.

Estuarine and Coastal Assessment -- Under the authority of Title II of the Marine Protection, Research, and Sanctuaries Act (P.L. 92-532) and Section 6 of the National Ocean Pollution Planning Act (P.L. 95-273), NOAA conducts a comprehensive and continuing national program of research and monitoring on the long-range effects of human activities on the marine environment. Program priorities are set in part by national needs outlined in the National Marine Pollution Program Plan. A critical element of this effort, being addressed through NOAA's National Status and Trends Program, is the development of a body of reliable information on spatial and temporal variations of estuarine and oceanic and environmental quality conditions. Major aspects of this program include a collection and analysis of the ambient concentrations of toxic synthetic organics and trace elements in mussels and sediments at 180 stations throughout the Nation's coastal and estuarine areas, similar measurements in bottomfish and sediments at 35 additional stations, and intensive surveys of the magnitude and extent of pollution in areas of great concern, e.g., Boston Harbor, San Francisco Bay, and Prince William Sound.

The program's purpose is to provide highly reliable data on concentrations of toxic chemicals in the Nation's estuaries to assess the long-term impact of those contaminants on environmental quality and to identify strategies for maintaining or improving environmental quality in these important areas. Because of increasing interest in the development of the resources of the Exclusive Economic Zone (EEZ), priority has been placed on the production of information products and services for the resolution of potential conflicts among uses of those resources, including the marine environmental quality resource.

Because of the ecological and economic importance of estuarine areas, NOAA is developing a unique national assessment capability that focuses on those areas. In addition, Executive Order 12316 designates the Secretary of Commerce as one of the Federal "public trustees" for natural resources with the responsibility for recovering damages to marine resources under the Comprehensive Environmental Response, Compensation, and Liability Act, and the Clean Water Act. To assist the Secretary in fulfilling this trusteeship responsibility, NOAA conducts a number of studies of the risks from toxic discharges of oil and hazardous materials from "Superfund" hazardous waste dump sites and from spills of oil and hazardous materials into estuarine and coastal areas of the Nation.

The following additional ocean assessment activities are conducted under this line item:

- Publication of a series of atlases on four major regions of the U.S. Exclusive Economic Zone containing available information on important physical, biological, and economic characteristics - - the Gulf of Mexico Data Atlas was completed in FY 1985; the Bering, Chukchi, and Beaufort Seas Data Atlas was completed in FY 1988, West Coast and Gulf of Alaska Data Atlas will be completed in FY 1990; and revision of the prototype East Coast Data Atlas, originally completed in 1979, will be revised in FY 1990.

- Maintenance and update of the National Coastal Pollutant Discharge Inventory, a national data base of 17 types of pollutant discharges from about 10,000 point sources, 1,200 urban areas, 300 U.S. Geological Survey cataloging units, and 175 rivers throughout coastal areas of the United States.

- Maintenance and continued development of a national data base on the geographic distribution of the life history of over 300 species of fish, shellfish, and marine mammals for the entire EEZ and coastal areas of the United States.

- Continued development of the National Estuarine Inventory, a data base of important characteristics of 100 estuaries throughout the United States to identify important environmental quality problems and resource use conflicts.

- Continued support to the U.S. Coast Guard during emergency responses to spills of oil and hazardous materials.

- Continued support to the U.S. Environmental Protection Agency during emergency response actions at "Superfund" hazardous waste dumpsites.

- Assessment of the risks to coastal and estuarine resources from toxic compounds discharged from "Superfund" hazardous waste dump sites in coastal areas (about 40 percent of the Environmental Protection Agency National Priority List are located in coastal areas). Under a major reimbursable agreement with the Minerals Management Service of the Department of the Interior, NOAA also conducts assessments of the effects of oil and gas development of the Alaskan outer continental shelf.

In FY 1990 NOAA will be implementing a natural resource damage assessment staff to carry out its trustee responsibilites. The staff will be comprised of marine scientists, resource economists and environmental lawyers. NOAA expects to initiate damage assessment and litigation at approximately seven hazardous waste sites that affect NOAA's trust resources in the marine environment.

The National Marine Pollution Program Office (NMPPO), under Sections 4 and 8 of the National Ocean Pollution Planning Act (P.L. 95-273), is responsible for preparing and updating the National Marine Pollution Program Plan, supporting the interagency National Ocean Pollution Policy Board, coordinating the implementation of recommendations contained in the most recent plan, and promoting the dissemination of results and findings of Federal marine pollution research and monitoring programs. The NMPPO will facilitate the coordination of Federal activities in high priority program areas such as wetlands studies, nonpoint source pollution, estuarine research, and monitoring the status of the marine environment. They will respond to approximately 1,000 direct inquiries for marine pollution data and information in FY 1990. The Federal Plan for Ocean Pollution Research, Development and Monitoring FY 1988-1992 was published and submitted to the Congress in early 1989. FY 1990 publications include the annual update of the National Marine Pollution Program Summary and Project Catalog. Further development of information synthesis products such as the Report on the State of the Marine Environment, the compendium of Federal laws and regulations related to marine pollution, the automated and indexed bibliography of Federal marine pollution reports, and the Federal handbook of marine pollution data and information sources will continue.

Coastal Ocean Science - NOAA is integrating base programs related to coastal ocean activities to focus its talents and capabilities on reaching the goals set for the three program areas of its Coastal Ocean Program:

Prediction of Coastal Ocean Degradation and Pollution;

Conservation and Management of Living Marine Resources; and

Protection of Life and Property in Coastal Areas

This effort is managed by the Coastal Ocean Program Office within NOAA's Office of the Chief Scientist. NOAA's activities will be undertaken in concert with other Federal, State, and local programs. The Coastal Ocean Program is designed to make effective environmental decisionmaking possible by supplementing current retrospective analyses with timely forecasts and prediction. The ability to predict environmental change will allow us to prevent problems and exploit opportunities through proactive regional approaches, rather than to only monitor and react to runaway problems. Providing decisionmakers with useful predictions of environmental change -- change caused naturally, as well as by society-- is a challenge NOAA accepts.

NOAA's plan for FY 1990 will be directed towards prediction of coastal ocean degradation and pollution in the following areas:

- Expand the existing National Status and Trends (NS&T) program to encompass new sites and investigations to determine biological responses to pollutants.

  -Increase the ability to detect and assess changes in coastal environmental quality by initiating intensive surveys of 2 highly contaminated estuaries and by funding research to determine biological responses to pollutants.

- Focus research on critical estuarine habits to examine their function under natural conditions and to support important marine life. Of special concern will include the effects of nutrient enrichment, diversion of freshwater flows, wetland habitat loss and alteration, and chemical contamination. This information is essential to develop cumulative impact.

  - Increase the capability to effectively describe, prevent, and mitigate detrimental changes in critical living marine resource habitats by completing development of preliminary models of critical estuarine ecosystem.

The habitat studies, together with another element of the FY 1990 program that uses satellite data to map the Nation's tidal wetlands, help to determine rates of change or disappearance of the Nation's wetland.

- Explore the effects of nutrient enrichment associated with human activities on the primary production and water quality of the Nation's coastal oceans and the implications of enhanced production to the global marine carbon cycle. The first study area will be the Mississippi River plume and the adjacent Louisiana Continental shelf.

  - Improve understanding of the influence of the Mississippi River Plume on Gulf of Mexico ecosystems by completing the 1990 field program and preliminary conceptual model of shelf productivity controls.

- Expand our ability to deliver timely information though enhancement of NOAA's new prototype geographic information systems, (ie COMPAS). NOAA will examine correlations among contaminant loadings, pollutant concentrations, distribution of living marine resources and habitats, and land use patterns. Prototype demonstrations of COMPAS with a selected coastal state will allow users to employ state-of-the-art GIS system to support their coastal environmental decisionmaking.

  A CoastWatch project for the Southeast Atlantic region will continue and one for the Chesapeake Bay will be expanded to include remote sensing to increase spatial and temporal observation resolution of spring algal blooms thought to be linked to the Bay's oxygen depletion.

  - Establish linkages between nutrient enrichment and low dissolved oxygen in the Chesapeake Bay, using environmental remote sensing, to produce joint products with EPA supporting the Bay clean-up.

  A prototype Interactive Marine Analysis and Forecast System (IMAFS) will increase NOAA's ability to access and combine rapidly changing observations with model output and archived data. Aspects of the NOAA Ocean Communication Network (NOCN) and IMAFS database management will become operational; software enhancements will allow display of additional satellite imagery; and additional physical, chemical, and biological historical data sets will be added.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Number of ocean observations quality controlled daily	4,000	8,000	24,000
Water level observations, quality controlled, monthly	160,000	170,000	180,000
Station-months, tide data acquired	2,250	2,310	2,370
Station-months, Great Lakes data acquired	648	600	600
Tidal datums computed	250	200	200
Station months, information disseminated	13,700	14,000	14,300
National strategic assessment products (e.g. data atlases) completed	4	4	4
National strategic assessment information bases developed	2	2	2
Benthic surveillance sites sampled	50	50	50
Benthic surveillance sites analyzed	50	50	50
Mussel watch sites sampled	150	150	150
Mussel watch sites analyzed	150	150	150
Oil and hazardous material spill responses	200	200	200
Scientific and technical publications	130	130	130

Changes for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Observation and Prediction	Pos./BA	191	$16,991	188	$16,865	-3	-$126
	FTE/Obl.	197		194		-3	

An increase of $2,300,000 is requested to expand NOAA's basic real-time ocean data collection, monitoring, analysis, prediction and distribution capabilities. These capabilities are fundamental to marine weather forecasts/warnings, climate and global change programs, and coastal ocean programs. The Ocean Services program provides the necessary foundation upon which NOAA's ocean programs and initiatives will build. At the current level, NOAA is unable to support the basic observation, analysis, and critical communication network for both NOAA's operational marine weather forecasting requirements and the global climate change and coastal ocean initiatives.

With this increase the Ocean Service program will be able to expand its focus on observing and predicting the coastal and global ocean environment and will also be able to provide the infrastructure needed to support marine ecosystem studies, habitat monitoring, and global climate change activities. The program will also be able to distribute biological and chemical oceanographic data and products to Federal and State agencies.

Four decreases totalling 3 positions and $2,426,000 are requested in this line item.

A decrease of $875,000 is requested for certain specific ocean services programs. Included in this amount is $375,000 to eliminate funding for NOAA facilities in Ann Arbor, MI; Narragansett, RI; and Beaufort, NC. These funds are no longer required. A reduction of $500,000 is requested to eliminate funding for the Center for Ocean Analysis and Prediction in Monterey, CA. The Center will be supported from other NOAA funds.

A decrease of $1,000,000 is requested for the circulation survey of Tampa Bay. This program was a FY 1990 Congressional add-on (Tampa Bay mapping Project). The survey is now under way and will be completed in FY 1990.

A decrease of three positions and $400,000 is requested in the circulatory survey program. The decrease will result in some reduction in the processing, analysis and archiving of circulatory data but the overall accuracy and reliability of tide and current predictions and circulation data will not be affected. The navigation model for Charleston Harbor supported by this program does not fill a federal need and should be funded by the shipping industry and/or the state which directly benefit from these programs.

A decrease of $151,000 is requested for two marine observation buoys off the coast of California. This program was a FY 1990 Congressional add-on. These buoys provide non-essential data used primarily by recreational boaters, not NOAA.

Location - This proposed reduction will affect personnel located in Rockville, MD.

	FTE/Obl.	132		131		-1	

Two decreases totalling one position and $1,900,000 are requested in this line item.

A decrease of one position and $1,000,000 is requested for a Congressionally directed assessment of the Long Island sound. NOAA has sufficient resources to conduct a robust nationwide program of ocean assessments. The order in which these assessments are undertaken should be left to NOAA's scientific determination, not political decision-making.

A decrease of $900,000 is requested for a joint Federal/State research and development project with South Carolina. The work in the Edisto watershed and upper reaches of the Combahee river of South Carolina is now underway and can be turned over to the State.

Location: The proposed reduction will affect personnel located in Rockville, MD.

		1991 Base		1991 Estimate		Increase/ (Decrease)	
Coastal Ocean Science	Pos./BA FTE/Obl.	10	$6,369	11	$17,369	+1	+$11,000

Coastal Ocean Program (+1 Pos., +$11,000,000) - An increase of 1 Position and $11,000,000 is requested to improve NOAA's capability to characterize, understand, predict, and help the Nation cope with serious coastal environmental issues. The increment to this NOAA-wide program is important because:

o The coastal ocean is a magnet for living and recreation, hundreds of thousands of people directly derive their incomes from working on or near it, and it effects the lives of millions who buy goods transported by sea, who visit coastal areas for recreation, and who consume products developed from its resources.

o As a Nation, we have allowed our coastal marine resources and environment to degrade. We now find it necessary to restrict where we swim and the fish and shellfish we eat. We are losing wetlands at a rate that is harmful to marine life. Our neglect has had serious economic consequences.

o The national economy, and especially the local economies of coastal communities, rely heavily on the quality and physical stability of the coastal environment. When beaches erode and are closed because of pollution, when fish and shellfish cannot be sold because of restrictions on their harvest, and when commercial and recreational fishing declines, the costs affect us all.

The FY 1991 request is an extension of NOAA's Coastal Ocean Program which includes ongoing efforts to refocus, coordinate, and integrate its programs to improve the understanding, predictability, and stewardship of coastal ocean resources. This effort is organized around three goals:

1. To predict changes in the quality of the coastal environment and its living marine resources to help prevent further habitat degradation and to recommend mitigative measures.

2. To predict the influence of fishing, habitat degradation, and natural forces on living marine resources to ensure optimal productivity today and for the future.

3. To predict the occurrence and impact of natural physical processes, for both short-term warnings and long-term planning, to prevent or minimize adverse effects of storms and erosion on coastal communities.

Program Content - Over the next 10 years, Federal and State governments will make billion-dollar decisions on actions to enact legislation and develop regulations, develop and implement management plans, install and operate pollution control equipment, conduct waste disposal operations, modify the physical environment, monitor, respond to emergency events, and assess and compensate for damages. The information currently available to make these decisions remains incomplete and often inadequate and inaccessible to appropriate levels of government and the private sector. Therefore, most decision-makers and scientists continue to address specific problems in selected parts of the coastal ocean on a piece-meal basis.

NOAA plays a vital Federal role in developing and implementing solutions to many of the problems confronting the Nation's coastal waters. That role includes legislative mandates as the Nation's steward for living marine resources, for allocating fish harvests, responding to hazardous spills, protecting marine mammals, and formal evaluation of proposed actions that effect living marine resources and the habitats upon which they depend. That role also includes providing information, advice, and the sound scientific basis for environmental decisions made by other local, state, and Federal decision-makers.

The scientifically sound and timely information provided to decision-makers, both within and outside of NOAA, falls into four categories:

1. Data on critical properties, synthesized spatially and temporally, and presented in ways meaningful to environmental decision-makers (e.g., regional maps of wetland loss rates, living marine resource distributions),

2. Predictions of longer-term environmental change that result from proposed human activities relative to change expected due to natural forces alone (e.g., interannual trends in important fish stocks; estuarine responses to nutrient loads),

3. Warnings of impending danger or damage to humans, property, or living marine resources due to the combination of natural and human actions (e.g. storm surge inundation and erosion of coastal wetlands and urban areas; land-fall of spilled oil),

4. Formal advice, evaluation and comments on proposed actions that effect living marine resources and the habitats upon which they depend (e.g., advice to Fishery Management Councils; comments on dredge-and-fill permits proposals).

The FY 1991 Program - To increase the value and effectiveness of its input to coastal ocean decision-making, NOAA will improve both 1) the QUALITY of the information and products being delivered and 2) the methods of information DELIVERY. Program expansions proposed for FY 1991, build upon the FY 1990 Program and NOAA's existing strengths. One of the goals associated with the FY 1991 program is to identify specific problem areas and produce information in a quick and timely manner for decision-makers.

Improving the QUALITY of the NOAA products and information requires focused synthesis and purposeful research and model development in two complementary frameworks: human impacts and natural variability. We focus on understanding and predicting change caused or exacerbated by human actions in four areas of immediate concern: 1) Nutrient over-enrichment, 2) Coastal inundation and erosion, 3) Estuarine alterations, and 4) Coastal ecosystems.

Nutrient over-enrichment (+$1,400,000) - This effort builds upon the FY 1990 program and includes a more detailed national assessment of over-enrichment problems and a program to monitor conditions associated with nutrient over enrichment and potential oxygen depletion. Research will focus on two themes: 1) The program initiated in FY 1990, investigating the impacts of nutrient enhanced coastal ocean productivity in the Mississippi River Plume/Louisiana Shelf region, will be continued and be expanded to initiate a study of the South Atlantic Bight. 2) The importance of atmospheric nutrient load, particularly to East Coast waters, will be evaluated and models of loading up will be developed.

Coastal inundation and erosion (+$200,000) - This is an initial effort to enhance existing data collection and analysis, research, and modeling efforts to provide immediate improvements in predictions related to short-term coastal flooding. It is expected to lead to a longer term effort related to observing and predicting chronic and extreme physical events affecting coastal ocean resources, particularly those very near the shoreline.

Estuarine habitat alteration (+$3,300,000) - This expansion of the FY 1990 effort includes critical assessments of estuarine characteristics, research to enhance our understanding of how major estuarine habitats function and how their functions are altered by human impacts, an estimate of the rate of loss of estuarine wetland habitats, and the impact of habitat alterations and losses on the living marine resources of our coastal oceans.

Coastal ecosystem (+$3,500,000) - The effects of impacts in the categories outlined above can be predicted and eventually controlled only if they are understood within the context of natural variability. Because this variability is driven by combinations of processes (e.g., storms, circulation, ecosystem dynamics) controlled predominantly by natural forces, we include complementary research and model development focussing on understanding the natural structure and function of coastal ecosystems and on predicting change caused naturally. These important research and model development efforts are tightly coupled to impact-focussed efforts outlined above and will provide fundamental understanding of the natural processes and mechanisms that control the productivity of living resources in estuarine and coastal ecosystems.

Common information delivery mechanisms (+$1,100,000) - NOAA will also enhance its DELIVERY mechanisms through improvements in its state-of-the-art geographic information systems and data display and communication systems. These include:

CoastWatch, the remote-sensing-based analysis and prediction program;

COMPAS, micro-computer based information system to provide coastal ocean assessments to local, state, and Federal users;

IMAFS, an interactive marine analysis and forecast system that provides access to, and analysis of, a wide array of real-time and retrospective data, and

NOCN, the backbone NOAA ocean communication network to unite several fragmented systems.

Common observations (+$1,500,000) - Finally, the ongoing and proposed research and model development efforts, as well as the data syntheses, depend on a common suite of observations. Thus, cross-cutting observations systems are also planned for initiation or expansion. These include surface and subsurface data gathered from buoys, ships, and other platforms, as well as from space.

The activities of NOAA's Coastal Ocean Program require efforts across the full spectrum of line offices. Therefore, the program is not line-organization specific. It is managed by NOAA, through a program office at headquarters, making use of a blend of internal programs, competitive grants to the academic community, and private-sector contracts. NOAA's coordinated coastal ocean program will continue to provide the needed national perspective leading to the enhancement of the quality and productivity of our Nation's coastal oceans.

Activity: National Ocean Service
Subactivity: Ocean and Coastal Management

Goals and Objectives

Goals: The goal of the Coastal Zone Management Act (CZMA) of 1972 as amended, is to promote rational use and conservation of the Nation's coastal zone. Technical support is provided to coastal states and territories to implement management programs; promote estuarine research and education through the establishment of a national system of estuarine reserves; facilitate the orderly and environmentally sound development and commercialization of deep seabed hard mineral resources and related technology through the implementation of an effective legal framework under the Deep Seabed Hard Mineral Resources Act (P.L. 96-283); and designate and manage valuable marine areas in accordance with Title III of the Marine Protection, Research and Sanctuaries Act as amended (P.L. 100-627).

Objectives: Monitor and evaluate the continued implementation of coastal management programs. Establish a nationwide system of estuarine reserves representative of the various biogeographic regions of the U.S. for research, long-term protection of resources and enhanced public understanding of estuarine areas. Administer the programs required by the Deep Seabed Hard Mineral Resources Act. These programs which are designed to regulate and encourage the mining of manganese nodules from the floor of the deep ocean by United States companies. Additionally, identify, designate, and manage discrete areas of the marine environment of special significance due to their conservation, recreational, ecological, historical, research, educational, or esthetic qualities.

Base Program

Coastal Management - The primary purpose of the CZM program is to address problems of the coastal and marine environment through a coordinated national effort that maintains a balance between resource protection and coastal-related economic activity. Federal resources fund staff to assist coastal states and territories in the development and implementation of their CZM programs and in the establishment and management of estuarine reserves. NOAA will continue to award financial assistance administration grants to states' approved coastal management programs under Section 306; award grants for reserve acquisition, development, operations, education, monitoring and research under Section 315 monitor state compliance with the terms of the financial assistance awards conduct evaluations of state CZM programs under Section 312 and review Federal agency actions for compliance Section 307.

The 1985 Budget Reconciliation Act amended the Estuarine Sanctuary Program under Section 315 of the CZMA to create a National Estuarine Research Reserve System composed of previously designated estuarine sanctuaries and future estuarine reserves that meet statutory criteria. These estuarine reserves provide natural field laboratories to study and gather data concerning the natural and human processes occurring within estuaries. NOAA plans for a national system which is representative of specific biogeographic regions.

Nineteen estuarine reserves have been established in Oregon, Georgia, Hawaii, Ohio, California (two), Washington, Rhode Island, Florida (two), Maryland, Puerto Rico, Maine, North Carolina, Virginia, New York, Alabama, New Hampshire, and Massachusetts.

Ocean Management - Under provisions of the Deep Seabed Hard Mineral Resources Act, NOAA issues licenses and permits for the exploration and commercial recovery of manganese nodules from the deep seabed. In support of this responsibility, NOAA is required to: (1) engage in environmental and ocean related research to assure that development occurs in an environmentally compatible manner and without "environmental risks" to industry; (2) help establish and implement a system whereby the United States and other mining nations recognize each other's seabed mining legal regimes and activities; and (3) facilitate compatibility among such activities.

The effort in FY 1991 will involve continued oversight of licensees' exploration; processing of amendments reflecting changes in corporate membership and in exploration plans; discussions with applicants regarding the environmental aspects of mining system tests; acquiring additional environmental information at license sites to aid in benthic impact predictions; consultations with other seabed mining countries; and consultations with corporations considering applying for licenses as new entrants.

Title III of the Marine Protection Research and Sanctuaries Act of 1972 authorizes the Secretary of Commerce to designate marine sanctuaries, with the approval of the President, in ocean waters as far seaward as the edge of the continental shelf, in other coastal waters to the ebb and flow of the tide, and the Great Lakes or their connecting waters. The National Marine Sanctuary Program was reauthorized in 1988. The reauthorization imposed requirements on NOAA to designate two sanctuaries in FY 1989, designate two sites and complete studies of four additional sites in FY 1990, and complete prospectuses leading to designation of two more sites in FY 1991.

By FY 1991 twelve sanctuaries will have been designated. The locations are: (1) the USS Monitor, off Cape Hatteras, North Carolina; (2) the Key Largo coral reefs south of Miami; (3) the Looe Key coral reef areas of the lower Keys; (4) the Channel Islands of southern California; (5) the Point Reyes/Farallones Islands (6) the Cordell Bank northwest of San Francisco; (7) the Gray's Reef area off Sapelo Island, Georgia; (8) Fagatele Bay, American Samoa; (9) Flower Garden Banks, off the Texas/Louisiana coast; (10) Norfolk Canyon, Virginia; (11) Monterey Bay and (12) the Western Washington Outer Coast. Two new sanctuaries, Northern Puget Sound of Washington State and New England's Stellwagen Banks will be active candidates for designation in FY 1991.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Ocean Mining Licenses monitored	4	4	4
Ocean Mining commercial recover issues being studied	2	2	2
Number of marine sanctuary sites designated	9	7	14
Number of marine sanctuary sites managed and enforced	4	7	9
Number of established estuarine reserves	18	19	21

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Coastal management	Pos./BA	43	$41,105	43	$36,205	0	-$4,900
	FTE/Obl.	45		45		0	

Three decreases totalling $4,900,000 are requested in this line item.

A decrease of $4,400,000 (object class 41.0) is requested for the Section 306 Program Administration and Section 309 Interstate Grants Programs. The Administration's Coastal Zone Management Act reauthorization bill will propose gradually moving away from formula grants to competitively awarded grants. It is anticipated that competitive grants will result in better management of state coastal resources with a lower Federal contribution.

A decrease of $500,000 is requested in the coastal zone and estuarine reserve program management funding. This reflects savings from implementing savings identified by the Commerce Inspector General.

Location - These proposed decreases will affect personnel in Washington, D.C.

Activity: National Marine Fisheries Service
Subactivity: Information collection and analyses

Goals and Objectives

Goals: Provide timely status of stock forecasts based on biological, ecological, economic, and social information necessary to achieve the optimum yield or sustainable populations of U.S. living marine resources, and protect their habitats for the benefit of the Nation.

Objectives: Collect, analyze, and disseminate timely information and recommendations on the status of fish, marine mammal, and endangered species stocks, and on the status of subsistence, commercial, and recreational fisheries, and their social and economic importance. Determine the impacts of the taking of marine mammals and endangered species. Provide a sound scientific basis for predicting change in the habitat of living marine resources from natural and human-induced causes, and the impact of those changes. Improve the quality and timeliness of information services concerning living marine resources, their habitats, and their use.

Base Program

The living marine resources within 200 nautical miles of the coastline of the U.S. contribute billions of dollars each year to the Nation's economy. Under the Magnuson Fishery Conservation and Management Act (MFCMA) and other statutes and international treaties, NOAA is responsible for providing the scientific and technical information needed to conserve living marine resources and their habitats. This information is used by Regional Fishery Management Councils, international and domestic fishery commissions, other Federal agencies, and NOAA as a basis for establishing and implementing a variety of conservation and management measures. Federal agencies also use this information to assess the effects of proposed developments and projects upon marine resource populations and habitats, and by public and private decision-makers to guide the development of the Nation's fishery resources. The information and analyses are the basis for management and development decisions that support the growth and stability of the U.S. fishing industry. Currently, NOAA is conducting research on 146 fish, marine mammal, and endangered species stocks, and their habitats. These assessments require continuous updating because of the dynamic and variable nature of the marine environment and the stocks involved. To complete these assessments, NOAA collects biological, environmental, and statistical data on fish, marine mammal, and endangered species stocks, their habitats, and use. Analytical models are then used to combine these data to assess trends in stock sizes, determine appropriate sustainable yields from resources, and ascertain their economic and social importance.

Resource information -- Activities are designed to collect biological and environmental data about the Nation's renewable living marine resources and their supporting environment. Renewable living marine resources include major fisheries, marine mammals, and endangered species. Research programs are conducted nationwide by NOAA's fisheries research laboratories and provide fundamental information required by Federal, state, and industry decision-makers for management and development purposes.

Scientific surveys, utilizing vessels and aircraft are conducted to collect biological and environmental information on the composition, abundance, and distribution of living marine resources of commercial, recreational, or ecological significance. This includes different species of groundfish, crab, herring, mackerel, shrimp, and salmon, as well as species of marine mammals and sea turtles. This information supports habitat conservation and resource management allocation decisions, including the resolution of conflicts among competing user groups. These surveys provide scientific samples used for determining the characteristics of the resource populations. Stock assessments are produced using a combination of information from surveys and information collected directly from the fishing industry. Industry statistics alone often reflect economic and fishing strategy biases which may mask actual resource abundance trends. A combination of NOAA vessels and chartered vessels is used to gather information concerning living marine resources and their essential habitats. Information from surveys is also obtained through contracts with state agencies, universities, and private organizations. Additionally, cooperative surveys with foreign countries are conducted. Furthermore, data on migratory marine species and environmental conditions in the oceans beyond the continental shelves of the U.S. are supplemented by data collected on ships of opportunity and satellite overflights.

Information is collected on living marine resource species' mortality and growth rates, age structure, distribution and migrations, habitats and physiological requirements, and diseases. These data provide understanding of biological processes necessary for developing biologically sound conservation and management strategies. Food chain and predator-prey relationships are particularly important in understanding the complex interactions of marine species and for moving into comprehensive ecosystem management.

Protected species research focuses on: east coast right whales, bowhead whales; protected species abundance, distribution, migrations and bioprofiles; Pacific coast marine mammal population trends and impacts of human activity; and, fur seal research. Other research focuses on porpoise and monk seals in the Southwest, bottlenose dolphins in the Southeast, and five species of sea turtles in the Southeast and two species in the Southwest. NOAA requires this information to fulfill its Marine Mammal Protection Act and Endangered Species Act responsibilities implemented under the Protected Species Management line item of the Conservation and Management Operations subactivity. In FY 1991, NOAA will continue the five-year Eastern Tropical Pacific (ETP) dolphin monitoring program, mandated under P.L. 98-64. The results of this program will be used to evaluate the ETP dolphin stocks. NOAA will also continue sea turtle work in the Southeast and Southwest.

Accurate prediction of fishery yields is difficult because of the variability in ecological factors that influence abundance of living marine resources. Environmental changes can impact living marine resources significantly during all life stages, which can in turn drastically affect future harvests. These changes also affect the distribution and availability of stocks in traditional migratory routes, feeding and spawning concentrations, and fishing grounds. The effects of natural and human-induced (i.e., fishing pressure, habitat alteration and pollution) changes on marine habitats are studied to determine their relative impacts upon the abundance, distribution, and physiological functions of species of commercial and recreational significance. NOAA also investigates the effects of dams, power plants, effluents, dumping, dredging, and logging on fish, marine mammals, and endangered marine animals. The resulting increased understanding from research in recruitment dynamics, pollutant effects, and ecosystem impacts helps managers to identify and mitigate the causes of mortality. Such action helps increase or maintain marine resource populations.

Anadromous fisheries research is conducted in the Pacific Northwest (in the Columbia River Basin) and in the Northeast. This research addresses salmon production and the quality of smolts released from hatcheries. Salmonid research is conducted to improve the production efficiency of salmon hatcheries in the Pacific Northwest and sea ranches in Alaska. Research is also conducted in support of the U.S. - Canada Pacific Salmon Treaty obligations, and to investigate the interception of U.S. salmon by the Japanese high-seas fishery. Treaty research, management, and enhancement activities are carried out primarily at NOAA's fisheries research laboratories in Auke Bay, AK, and Seattle, WA. Extensive work to implement the Treaty is also done in cooperation with the states of Alaska, Washington, Oregon, and Idaho; Indian tribes; and the Pacific Salmon Commission in Vancouver, British Columbia. NOAA's activities are managed by a field office located in Portland, OR. Base program activities also include Atlantic salmon research, tagging, and support for the North Atlantic Salmon Commission.

Advanced technology is developed and used to improve the timeliness and quality of the information on living marine resources and their habitats. In some fisheries, acoustic devices are used to locate fish and estimate their abundance. Aerial and satellite sensors are used and evaluated for locating plankton concentrations; measuring water temperature, salinity and turbidity; tracking fish, mammals and sea turtles; and for directing research and fishing vessels to places of interest. The application of advanced technology increases the speed with which large ocean expanses and extensive coastal areas can be surveyed, thereby giving a more complete picture of oceanic conditions and how these conditions change.

Fisheries industry information -- Production or output data is necessary to complete the information data base for making and determining the efficacy of management decisions and regulatory measures. Production data consists of biological and economic information collected as a necessary complement to the biological and environmental information collected directly under the Resource Information line item.

Information is collected on the commercial and recreational harvesting and disposition of living marine resources. This information includes: (1) volume and value of catch in domestic and foreign fisheries by species, region, state and type of fishing gear; (2) incidental take or harvest of non-target species; (3) fishing effort and costs associated with catch; (4) volume and value of processed fishery products from domestic harvest and imports; (5) cold storage holdings of fishery products; (6) production of industrial fish products (e.g., fishmeal and oil); (7) the number of operating units and people employed in harvesting and processing fishery products; (8) imports and exports of fishery products; (9) consumption of fishery products; and (10) number of marine recreational fishermen and their catches, effort and expenditures. Fishing effort and location data are collected by logbooks in some fisheries and from interviews of fishermen in others. Samples of the commercial and recreational catch are also collected for biological and statistical analysis. As a result, NOAA obtains a variety of different data from foreign and domestic fishing vessels, surveys of fishermen, records of landings, and onshore fishery facilities. These data are collected in cooperation with the states, foreign governments, and the commercial and recreational fishing industry. They are essential to determine the status of living marine resources and the effectiveness of their management.

Information analysis and dissemination -- Activities are designed to analyze and disseminate the data collected under the Resource Information and Fisheries Industry Information line items using an ecosystems perspective.

Information, analyses, and recommendations on the status of stocks and the effects of management options are provided to NOAA, the eight Regional Fishery Management Councils, and commissions established through international treaties. Biological, ecological, and economic information concerning living marine resources is analyzed to characterize the status of various species, including their reproductive and growth rates, food requirements, interrelationships, habitat requirements, and behavioral characteristics, and to assess the present and future status of those stocks of significant commercial or recreational value, including their abundance and geographic distribution. This information is also used to identify the consequences of natural and human-induced changes in the marine environment on the production and abundance of living marine resources, and to analyze the impacts of fishery management measures on the resources and the industry. Significant emphasis is placed on computer systems for data management to process scientific, administrative, and technical data used in living marine resource management; ecosystem modeling; stock abundance predictions; and other large scale scientific applications. NOAA also needs to share data easily with states and interstate marine fisheries commissions for management of interjurisdictional fisheries, such as menhaden or mackerel, and with other countries, such as Canada or Mexico, for management of transboundary fisheries, including salmon and shrimp.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Number of living marine resources (LMR) stocks assessed[1]	146	146	146
Scientific publications published	440	440	440
Statistical records collected (millions)	14.1	14.1	14.8
Computer references generated and disseminated	18,450	19,000	19,800

[1] Includes 111 fish, 28 marine mammal stocks, and seven sea turtles.

Changes for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.+ or Dec.-	
Resource information	Pos./BA	802	$76,438	811	$63,413	+9	-$13,025
	FTE/Obl.	846		848		+2	

A net decrease of $13,025,000 is proposed for resource information activities.

Increases totalling 31 positions and $5,200,000 are requested to conduct important fisheries research for the conservation and management of living marine resources.

- Conservation engineering.....+8/+$750
- Alaska groundfish............+2/+$700
- Bering Sea pollock...............+21/+$750
- Marine mammal pop. assessments...0/+$3,000

An increase of eight positions and $750,000 is requested to address by-catch issues through conservation engineering. Initially conservation engineering problems in Alaska will be addressed. By-catch of king crab and halibut in the eastern Bering Sea groundfish fisheries is a contentious management issue because it reduces the amount of king crab and halibut available to target fisheries. However, if bycatch limits were imposed, it would prevent the groundfish resources such as pollock and cod from being fully exploited. There are technical and biological interaction issues involved; the technical interaction being the direct loss of halibut and crabs from mortality induced by the groundfish fisheries, and the biological interaction being the predation of many of the groundfish species on crabs. Unfortunately, insufficient information exists on these interactions to quantify and assess accurately their impacts. This increase will provide for assessment of both technical and biological interactions, and for the development of a multispecies model that includes these interactions to assist management in resolving the bycatch issue.

An increase of two positions and $700,000 is requested to conduct Alaskan groundfish surveys to replace surveys previously conducted by the Japanese. Since 1979, the Japanese government has cooperated with the NMFS Northwest and Alaska Regions in fisheries resource surveys in the EEZ off the coast of Alaska. These surveys were conducted in the Gulf of Alaska, the Aleutians, and the eastern Bering Sea. The Japanese have discontinued these cooperative surveys because of the Americanization of our Alaskan groundfish fisheries. Without the Japanese assistance in conducting these resource surveys, the U.S. will have no new or updated information on the status of Gulf of Alaska and Aleutian groundfish stocks (e.g., turbot, sablefish, Pacific Ocean perch, flatfish, Atka mackerel, and pollock) which are now subject to increased domestic fishing. This increase will enable NMFS to contract with U.S. fishing vessels to replace the lost Japanese effort. This survey data is required to update the allowable biological catch (ABC) estimates for these groundfish stocks. The lack of this data could lead to stock depletions and economic losses to the Alaska groundfish industry that currently contributes more than $1,000,000,000 annually to the economy of the Nation.

An increase of 21 positions and $750,000 is requested for Bering Sea Pollock research. Pollock is the most abundant species in the eastern Bering Sea-Aleutian Islands area comprising well over 50 percent of the total groundfish catch. Pollock range completely around the Pacific rim, from Washington State to the Sea of Japan. Heavy foreign fishing in the international zone of the Aleutian Basin is detrimentally affecting the pollock stocks of the U.S. EEZ. This increase will enable NMFS to assess the interrelationships of pollock in the international zone of the Aleutian basin to the pollock of other areas (U.S. EEZ, Soviet EEZ and Western Pacific), and to clarify the role these stocks play in the Bering Sea ecosystem. This scientific information is critical if the U.S. is to conserve the Bering Sea pollock resources, and support future international negotiations.

An increase of $3,000,000 is requested to conduct marine mammal population assessments as directed by the Marine Mammal Protection Act (MMPA) amendments of 1988. Implementation of programs to meet legislative requirements, such as recent amendments to the MMPA, and resolution of problems associated with the incidental taking of protected species and other animals of interest to the U.S., are not adequately funded. Section 114 of the 1988 MMPA amendments directs the Secretary of Commerce to implement a new, interim exemption system for granting incidental take authority to commercial fishermen until October 1, 1993. The two principal components involved are the levels of incidental take and an assessment of the status of the affected populations. The need for research to make population assessments is a critical element, but was not addressed in the MMPA amendments nor spelled out in the subsequent implementation schedule. This request addresses high priority domestic fisheries. Management actions addressing the effects of incidental take will depend on the potential vulnerability of a population, and this requires the knowledge of: (1) whether the population is growing, stable, or declining; (2) information on the population throughout its range; and (3), the known or expected level of take. To determine the effects of incidental take, the most important information needed are the levels and severity of the take, population size and trends, and stock identity. NOAA is required to recommend to Congress by January 1, 1992, a proposed long-term program to manage incidental takings of marine mammals associated with commercial fisheries. In order to meet that time schedule, NOAA must begin conducting and contracting now for the required research studies. For FY 1991, this would include studies on the harbor porpoise, steller sea lion, bottlenose dolphin, harbor seal, California sea lion, and the beluga, humpback and killer whales. Additional species will be addressed in future years.

A decrease of 22 positions and $18,225,000 is requested to reduce or terminate lower priority resource information activities. The remaining base programs along with requested increases will fund high priority management needs anticipated for FY 1991.

- Field structure savings.........	0/-$4,000	- Right whale research..........	0/-$235	- Yukon River Chinook Salmon...	0/-$235
- Stk enhancement/disease rsch...	-22/-$4,287	- Alaska salmon enhancement.....	0/-$3,766	- Antarctic research...........	0/-$1,300
- Protected species research.....	0/-$649	- Subarctic bottomfish rsch.....	0/-$753	- Atlantic salmon research.....	0/-$500
- Chesapeake Bay studies.........	0/-$1,600	- Hawaii stock management.......	0/-$400	- Oyster disease research......	0/-$500

A decrease of $4,000,000 is requested from projected savings to be achieved through the closing and consolidation of NMFS research facilities and related management actions. NOAA is undertaking a review of its current fisheries research laboratory field structure and the research/data collection activities required to support regulatory and other conservation and management requirements under various Federal laws. Based on this review, specific cost saving measures will be proposed to provide the level of savings identified.

A decrease of 22 positions and $4,287,000 is requested for stock enhancement and disease research. Funding will remain to support the sea turtle head start program at Galveston, TX. Non-salmonid research and development activities will be terminated at NOAA's fisheries laboratories in Milford, CT; and the Silver Spring, MD, headquarters ($1,887,000). Industry should fund aquaculture development in areas where there are economic returns to be gained. Federal funding should not support a state facility such as the Newport, OR, laboratory ($350,000) where the state receives direct benefit. NOAA funding should not support catfish rearing ($550,000) and facilities construction ($1,500,000) at Stuttgart, AR, because these activities relate to freshwater programs which are the responsibility of the Department of Interior. NOAA is responsible for marine fisheries, and as confirmed in 1988 by a Commerce Inspector General study, NOAA is not responsible for, nor authorized to operate freshwater facilities such as Stuttgart.

A decrease of $649,000 (object class 25.0) is requested for protected species research. This decrease will result in reduced NOAA research on bowhead whales ($299,000) and the elimination of funding for the Alaskan Eskimo Whaling Commission (AEWC)($350,000). Remaining base programs will continue high priority studies on sea turtles and limited-high priority bowhead whale research.

A decrease of $1,600,000 (object class 25.0) is requested for the Chesapeake Bay studies directed by a Congressional add-on in FY 1990. This will reduce NOAA's Chesapeake Bay research activities which emphasized the relationship between natural and human-created factors and the response of fish populations. This effort was conducted in cooperation with other Federal and non-Federal agencies. Efforts to clean up the Chesapeake Bay will continue with the Environmental Protection Agency, the State of Maryland, and the Commonwealths of Virginia and Pennsylvania.

A decrease of $235,000 (object class 25.0) is requested for the right whale research directed by a Congressional add-on in FY 1990. This research has been funded since FY 1986 to conduct cooperative studies with the University of Rhode Island on the Atlantic coast right whales. Funding in FY 1991 is not required.

A decrease of $3,766,000 (object class 25.0) is requested for Alaska salmon enhancement activities directed by a Congressional add-on in FY 1990. This funding passes through NOAA to the Alaska Department of Fish and Game. There is no evidence that these activities are necessary. Furthermore such activities should be funded by the State which is the direct beneficiary of the hatcheries.

A decrease of $753,000 (object class 25.0) is requested for the sub-Arctic bottomfish research directed by a Congressional add-on in FY 1990. This cooperative fisheries/oceanography research effort takes an ecosystems approach in defining and quantifying environmental relationships with productivity and recruitment of commercial fish and shellfish stocks in Auke Bay, AK. The Association of Primary Production and Recruitment (APPRISE) is a cooperative effort involving the University of Alaska, the Oceanic Institute of Hawaii, and NOAA's Auke Bay, AK, fisheries research laboratory. Research in this area is being conducted through NOAA's Fisheries Oceanography Cooperative Investigation program. High priority work under this research effort will continue using NOAA base funding.

A decrease of $400,000 (object class 25.0) is requested for the Hawaii stock management plan used to enhance commercial and recreational fish stocks in the Hawaiian Islands. This activity has been supported since FY 1987 and is expected to be completed during FY 1990.

A decrease of $235,000 (object class 25.0) is requested for the Yukon River chinook study. This study, which has been funded since FY 1987, provides information used to implement positions of the U.S.-Canada Pacific Salmon Treaty. Additional information is not required in FY 1991 for Treaty implementation and harvest allocation.

A decrease of $1,300,000 (object class 25.0) is requested for the Antarctic marine living resource program (AMLR). Funding for this field research program was directed by Congress under P.L. 98-623 to establish coordinated programs with other Federal, foreign, and international agencies. NMFS will continue high priority program elements within the base program.

A decrease of $500,000 (object class 25.0) is requested for the Atlantic salmon research activities directed by a Congressional add-on in FY 1990. The NMFS fisheries research laboratory at Woods Hole, MA, contracts with states and other Federal agencies to conduct Atlantic salmon studies to determine the interception rate of U.S. origin Atlantic salmon by foreign fisheries in Canadian and Greenland waters, to develop stock identification methods, to establish seasonal restrictions to protect U.S. salmon from foreign high seas fisheries, and to determine river-of-origin of Atlantic salmon based on scale pattern analysis. These activities should be funded by states and/or commercial fishermen who are the direct beneficiaries.

A decrease of $500,000 (object class 25.0) is requested for oyster disease research activities directed by a Congressional add-on in FY 1990. NOAA has worked with the State of Maryland, the Virginia Institute of Marine Science, and others to conduct research emphasizing the development of the monoclonal antibody approach for disease diagnosis. The highest priority aspects of this research, originally projected to be a one-year project, will be substantially completed.

Variable Ship Costs ($2,390,100) - Variable ship costs associated with the Resource Information line item support 1,576 days-at-sea and are requested under the Marine Services subactivity.

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Fisheries industry information	Pos./BA	126	$10,898	132	$13,898	+6	+$3,000
	FTE/Obl.	133		137		+4	

An increase of $1,000,000 (object class 25.0) is requested for PACFIN activities. PACFIN is a coordinated effort involving California, Oregon, Washington, Alaska, the Pacific, North Pacific and Western Pacific Regional Fishery Management Councils, the Pacific Marine Fisheries Commission, and NOAA. Although Congress appropriated an initial $1,000,000 in FY 1990 to support existing PACFIN efforts, it was not sufficient to address the increased level of stock assessment and catch/effort data necessary to manage the rapidly growing groundfish fisheries off the west coast and Alaska. The Councils and NOAA are under intense pressure by several commercial fisheries to develop fishery management plans (FMPs) for abundant stocks such as pollock. Catch-effort data and in-season monitoring of harvest rates and their effects on catch-effort/stock levels are required to support existing and new FMPs, and to address the increased user conflicts and threats to the fishery stocks managed under the MFCMA. This increase will enable NMFS to manage and develop Pacific Ocean fishery resources more effectively and efficiently by improving stock assessments, improving state and Pacific Marine Fisheries Commission data systems and standards, and implementing a fisheries data system in the western Pacific.

An increase of six positions and $2,000,000 is requested to provide for Alaska groundfish monitoring. The Americanization of the groundfish fishery in the EEZ off the coast of Alaska has resulted in the rapid growth of both the harvesting and processing sectors of the domestic groundfish fisheries. The user conflicts between various segments of the industry, and the large sums of capital invested have resulted in requests for improved stock assessments. Detailed fisheries data are required to improve alternative management strategies, and to assess the economic performance of fisheries. To meet this information demand, new efforts are required to monitor fisheries. This increase will address the following: (1) a catch reporting system that links vessel based computers directly to a central data base located at the Alaska Regional Office in Juneau, AK; (2) a system of observers and port samplers that can retrieve catch data and biological sampling from various segments of the industry; (3) increased assistance to the State of Alaska for improved data collection on groundfish, and the implementation of the data reporting requirements for the king and tanner crab fishery management plan; (4) an integrated industry data base management and reporting system; and (5), field/observer positions for data collection.

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Information analyses and dissemination............................	Pos./BA	352	$19,277	352	$20,977	0	+$1,700
	FTE/Obl.	370		370		0	

An increase of $1,700,000 is requested to lease computer hardware and software to support NOAA's fisheries research activities at Seattle (Sand Point), WA; Miami, FL; and Silver Spring, MD.

The Burrough's 7800 and 6800 computer systems at Seattle (Sand Point), WA, and Miami, FL, are now particularly vulnerable as the manufacturer has refused to continue the maintenance agreement for computer hardware after November 1990. The operating systems for those machines will no longer be supported after June 1990. NMFS needs to meet the current and projected top-end computing needs to support the full spectrum of domestic and international management of living marine resources (fish, marine mammals, endangered species) including improved stock forecasts. Major benefits of improved stock forecasts accrue to commercial and recreational fishermen and processors in important fishing states such as Massachusetts, South Caroline, Florida, Louisiana, Mississippi, Texas, California, Washington, Oregon, Alaska, and Hawaii. These improved forecasts will enhance the ability of the Councils, international organizations (e.g., IWC) and others to make well-informed management decisions concerning living marine resources. In addition, updated computer facilities will allow for improved agency analyses and decisions; reduced response time on policy issues; new types of research and analyses; improved collaboration on such issues as US/Canada treaties; and, improved compliance with various laws.

Justification of Program and Performance

Activity: National Marine Fisheries Service
Subactivity: Conservation and management operations

Goals and Objectives

Goals: Implement and monitor conservation and management measures to achieve a continued optimum utilization of living marine resources and their habitats, rebuild depleted stocks, and provide an enhanced opportunity for stability of the recreational and commercial fishing sectors.

Objectives: Identify depleted and overexploited fish stocks. Assist in the development of domestic and international management measures that would provide for stock rebuilding. Consider effort controls such as limited access, individual transferable quotas, and enterprise allocations. Secure the best terms possible for access of the U.S. commercial and recreational fishing industries to foreign and international fishery resources. Conserve populations of marine mammals and endangered species that are affected by domestic and international human activities. Conserve the habitats of living marine resources and associated ecosystems to sustain those resources at optimum levels. Ensure compliance with management regimes for fishery resources, marine mammals, and threatened or endangered species.

Base Program

The Magnuson Fishery Conservation and Management Act (MFCMA), establishes exclusive U.S. jurisdiction over virtually all living marine resources in the 2.2 million square miles of ocean area, known as the Exclusive Economic Zone (EEZ), within 200 nautical miles of the coastline of the U.S. and its territories. The MFCMA also authorizes habitat conservation, research, and stewardship throughout species' ranges. This MFCMA was passed to assure that fishing within the EEZ is conducted under sound scientific and economic conditions. Under the MFCMA, the U.S. commercial and recreational fishermen have preference over foreign fishermen to harvest resources within the EEZ. Through management decisions, regulations, enforcement, and conservation activities, NOAA and the eight Regional Fishery Management Councils established by the MFCMA, work with the states, industry, other Federal agencies, and other organizations in an attempt to provide stability and growth to the U.S. living marine resources and the domestic fishing industry. These efforts are based upon a continuous flow of data, information, and analyses provided by NOAA, universities, and the international scientific community. In 1988, the foreign catch within the U.S. EEZ was reduced by over 99%, compared to 1976. Estimates regarding the 1991 domestic harvest show totals will meet or exceed 1988 levels.

In addition, other fishery resources must be monitored such as tuna, swordfish, billfish, sharks, groundfish, anchovies, scallops, and salmon that range beyond the U.S. EEZ and are harvested by the fishing fleets of the U.S. and many other countries. NOAA also participates in international management efforts to maximize U.S. access to these resources.

Fisheries management programs -- Commercial and recreational fisheries are managed to prevent overfishing and stock depletions, to protect their habitats from further degradation and pollution, to increase domestic harvests, and to maintain optimum yields. This management would, for example, allow the commercial fishermen and processors to operate in a more stable and profitable environment, and the recreational fisheries to support high quality angling experiences.

The U.S. fisheries which extend beyond the U.S. EEZ are managed by international organizations under several treaties and international agreements. Currently, nine international fishery management agreements are implemented involving 50 countries and species such as halibut, tuna, and salmon. NOAA monitors significant fishery activities in foreign countries to determine their effects on U.S. interests. NOAA acquires information on foreign fishing practices and the fishery policies and programs of foreign governments through the translation and review of technical literature, discussions with foreign and international fishery officials, and communications with U.S. diplomatic officers. Additionally, foreign fishing within the U.S. EEZ is assessed. This information is used by NOAA and the Department of State in negotiating and implementing international fishery agreements. It is also used for determining which foreign countries will be allowed to harvest the fishery resources not utilized by U.S. fishermen within the U.S. EEZ. NOAA participates in numerous negotiations with representatives from foreign countries and international fishery commissions. These negotiations and fishery allocation decisions occur throughout each fishing year and require a continuous assessment of information on the fishing industries of foreign countries.

The RFMCs are responsible for developing fishery management plans (FMP) for foreign and domestic fisheries in the U.S. EEZ. The Councils may also become involved in ecological issues in estuarine or freshwater areas affecting managed species under their review. NOAA provides the Councils with technical and administrative assistance, and financial support to develop, monitor, and amend FMPs. Each existing plan may have one or more amendments per year. Councils annually review applications for fishing permits from foreign countries, conduct over 100 public hearings and meetings, and determine the yields and total allowable level of foreign fishing (TALFF) for each fishery under management within their jurisdiction. NOAA reviews the management plans developed by the Councils to ensure compliance with the MFCMA and implements these plans through promulgation and enforcement of regulations. NOAA issues permits for foreign fishing conducted under such plans. A shift in emphasis from plan development to implementation and monitoring will continue in FY 1991. This shift also includes broadening species composition or geographical area of some management plans. For example, the Western Pacific seamount groundfish preliminary fishery management plan has been replaced by a management plan for the Western Pacific bottomfish and seamount groundfish fishery. Current estimates are that three FMPs will be implemented in FY 1990 and three FMPs implemented in FY 1991. Permit fees and poundage fees collected by NOAA from foreign countries with fishing fleets operating within the fishery jurisdiction of the U.S. are currently deposited in the General Fund of the Treasury as proprietary receipts to the Department of Commerce.

The coastal states are responsible for conserving and managing the commercial and recreational fisheries within their boundaries (generally within 3 nautical miles of the U.S. coastline). Approximately 35 percent of the commercial harvest and more than 75 percent of the recreational fisheries catch comes from state waters. State cooperation and coordination of interjurisdictional state effort supports effective management. NOAA provides technical and financial assistance to the coastal states and interstate marine fisheries commissions to conserve and manage fisheries and to participate in the activities of the Councils.

NOAA funds the operation and maintenance of the Columbia River hatcheries authorized under the Mitchell Act. The hatcheries mitigate for loss of salmon and steelhead habitat caused by Federal dams. Funding for this program is not requested for FY 1991 since legislation will be proposed to transfer the funding to a non-Federal source. NOAA also contributes to the salmon management plan development, reviews fish ladder and screen designs, assists in water budget and fish transportation activities, and implements provisions of the Northwest Power Planning Act and the U.S.-Canada Pacific Salmon Treaty.

Protected species management -- These activities use scientific information provided from research on the biology of protected species as the basis for protected species management and conservation. NOAA is required under three principal Acts relating to protected species to consider and minimize the effects of human activities in the marine environment that interact with these species: the Marine Mammal Protection Act (MMPA), the Endangered Species Act, and the Fur Seal Act.

The MMPA of 1972 established a national policy for protecting and conserving marine mammals by imposing a moratorium, with certain exceptions, on the taking or importing of marine mammals and marine mammal products. NOAA shares the responsibility for implementing the MMPA with the Department of the Interior and is responsible for more than 100 species of whales, porpoises, seals, and sea lions. NOAA administers the moratorium by developing and implementing procedures to reduce the mortality of marine mammals during domestic and foreign commercial fishing operations, Outer Continental Shelf development, and other activities affecting these animals. In 1988, the MMPA was amended to require observer coverage on domestic fishing vessels in fisheries where a high level of interaction between the fishing operations and marine mammals was expected. NMFS began implementation of this program in 1989 and will achieve observer coverage in nine Category I fisheries in FY 1990. NOAA processes applications for the taking or importing of marine mammals and conducts public hearings on these applications. Since 1972, 955 scientific research and public display applications have been received, and 657 permits have been issued. The take authority for 155 permits is currently valid, and 392 permits were monitored during FY 1988 (latest data). Approximately 60 applications for permits are processed each year. NOAA is responsible for implementing several international agreements concerning marine mammals including the International Convention for the Regulation of Whaling and participates in numerous international negotiations concerning these and other marine mammal agreements.

NOAA is also responsible for the management, conservation, and recovery of 21 marine species listed as threatened or endangered under the Endangered Species Act (ESA) of 1973. Through interagency agreements, NOAA cooperates with the Department of the Interior in listing, protecting, and controlling the importation of threatened or endangered marine species into this country. NOAA also promulgates and administers regulations; reviews state laws, regulations, and management programs for compliance with Federal regulations; monitors certificates which allow limited interstate commerce in certain whale oil and scrimshaw products; and reviews applications and issues permits for scientific research and propagation activities. NOAA provides public education and information services on protected species; participates in regional networks for stranded mammals with universities, state agencies, and private organizations; develops species recovery programs; consults with other Federal agencies; and develops biological opinions under Section 7 of the ESA to assist Federal agencies in ensuring that their activities are not likely to jeopardize the continued existence of listed species or their critical habitats.

NOAA manages the fur seal herd, located in the Pribilof Islands, as authorized by the Fur Seal Act of 1966; as amended (P.L. 98-129), and conducts supporting research under the protected species biology program. NOAA also contributes to the retirement fund established by the Fur Seal Act for Aleuts. A $20 million trust fund was established with the State of Alaska in 1983 for the benefit of the residents of the Pribilof Islands. The trust fund provides capital to allow for transition from a Federally supported economy to a self-supporting fishing and tourism-based economy.

Habitat conservation -- Habitat management activities are vital for the long-term survival and health of living marine resources including important target species of U.S. commercial and recreational marine fisheries. These activities use scientific information provided from ecological research as the basis for habitat conservation and support of the Administration's policy of no net loss of wetlands.

NOAA provides Federal agencies with information and recommendations concerning the ecological impacts of proposed actions which would affect the habitats of anadromous (e.g. salmon), estuarine, and marine fish populations. Such advice and recommendations by NOAA are authorized under the Fish and Wildlife Coordination Act (FWCA), the National Environmental Policy Act, the Clean Water Act, and other legislation. The MFCMA also gives authority and opportunity for NOAA and the eight Regional Fishery Management Councils to attain habitat conservation objectives. Typical subjects for analysis are construction projects by the Bureau of Reclamation and the Army Corps of Engineers; projects requiring Corps of Engineers' permits for dredging and filling; projects requiring Federal Energy Regulatory Commission licenses for hydropower plant construction; and projects requiring contaminant discharge permits from the Environmental Protection Agency.

To assess potential adverse ecological impacts, NOAA annually evaluates numerous leases for oil and gas exploration and production on the Outer Continental Shelf and thousands of Federal projects and permit applications filed with the Corps of Engineers. In 1988, such permit applications covered over 39,000 acres of coastal habitats with fisheries values estimated in excess of $12 million in terms of commercial fishery harvests (latest data). NOAA also reviews and provides technical assistance on fisheries matters important to state coastal zone management plans, special area management plans, and proposed marine and estuarine sanctuaries. These consultations help to minimize or eliminate adverse effects on marine fish populations by recommending appropriate alternatives and mitigation which would be compatible with a healthy marine environment.

Evaluations and reviews are coordinated to minimize delays and confusion to applicants. During FY 1991, NOAA will continue to implement its national habitat conservation policy. The policy emphasizes identification and action on priority resource issues and supports the involvement of the Councils, states, industry, private interests, and other Federal agencies interested in habitat conservation matters.

Enforcement and surveillance -- Activities support the enforcement of existing laws and regulations and comprise one of the key ingredients for credible management efforts to support the growth and stability of the domestic fishing industry. NOAA enforcement agents investigate violations of Federal laws and regulations under the MFCMA, the MMPA, the ESA, the Lacey Act, and other Federal statutes and international agreements relating to living marine resources.

Enforcement agents investigate violations of Federal laws and regulations to ensure that both foreign and domestic fishing vessels are operating in accordance with fishery management requirements. NOAA also protects living marine resources by investigating illegal importation or interstate transportation of parts or products of protected species. This protection includes conducting the full range of investigative activities such as the purchase of evidence and information, seizure of contraband, and management of operating funds for covert operations and undercover activities conducted by NOAA's enforcement agents. Enforcement and surveillance activities involving fishing vessels are planned and conducted in cooperation with the U.S. Coast Guard, which provides aerial and surface patrol craft. NOAA also charters aircraft to supplement the Coast Guard's effort and enters into cooperative agreements with state enforcement agencies. Shoreside activities also require the purchase or lease of government unmarked sedan vehicles to carry out undercover operations and investigations. These actions reduce the illegal harvesting and taking of stocks and fishing gear conflicts and ensure that conservation and management measures are met. Surveillance activities also provide information concerning catches and fleet movements used for managing domestic and foreign fisheries and in international negotiations.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Fishery Management Plans implemented (cumulative)	36	39	42
FMP amendments	12	17	18
Regional Fishery Management Council formal meetings	50	45	50
Public hearings conducted (and public comment periods)	120	120	120
Protected species permits monitored	410	440	470
Marine mammal exemptions	10,300	15,000	20,000
Habitat recommendations provided on Federal permits and projects	7,200	7,200	7,200
Violations investigated	2,775	2,800	2,900

Increases/Decreases for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Fisheries management programs	Pos./BA	145	$29,111	145	$19,340	0	-$9,771
	FTE/Obl.	153		153		0	

Two decreases totalling $9,771,000 are requested in the fisheries management program line item. Management regimes will be continued in FY 1991 for those stocks under approved management programs.

A decrease of $9,300,000 (object class 25.0) is requested for the operation and maintenance of the Columbia River program hatcheries. These hatcheries are required to mitigate the harmful effects of dams built along the Columbia River to serve the local population. Legislation will be proposed to transfer funding responsibility for the hatcheries operation and maintenance to a non-Federal source.

A decrease of $471,000 (object class 25.0) is requested for the management of Georges Bank fisheries. High priority cooperative work with the Canadian government on Georges Bank fisheries will continue with other New England fisheries programs and through existing U.S.-Canadian agreements.

		1991 Base		1991 Estimate		Inc.(+) or Dec.-	
Protected species management	Pos./BA	79	$14,448	79	$14,712	0	+$264
	FTE/Obl.	85		85		0	

A net increase of $264,000 is proposed for protected species management programs.

An increase of $300,000 (object class 25.0) is requested to augment the observer monitoring effort of the North Pacific Driftnet Program. In FY 1990, Congress appropriated $3,000,000 to establish a Driftnet Program to address the illegal catch of U.S. salmon and steelhead trout by foreign fishermen in the North Pacific Ocean. This program included observer monitoring, research and assessments, studies on impacts of by-catch, and mitigation measures. Approximately $1,300,000 of the initial $3,000,000, was identified for the observer program to fund 40 scientific observers and processing support. The budget for the observer program was based upon the normal placement of observers on the foreign fishing or support vessels through foreign ports. Based on experience to date, at least 50 observers will be required to provide a comprehensive sampling of the entire driftnet fishery.

A decrease of $36,000 (object class 25.0) is requested for the State of Oregon's Department of Fish and Wildlife program to collect data on harbor seals and sea lions. Funding for this work was not requested by NOAA but directed by a Congressional add-on in FY 1990. NOAA will continue to conduct ongoing assessments of marine mammals with base funds in FY 1991.

Justification of Program and Performance

Activity: National Marine Fisheries Service
Subactivity: State and industry assistance programs

Goals and Objectives

Goals: Increase the benefits to the United States from the Nation's commercial and recreational fisheries.

Objectives: Increase the sale of fresh and processed fishery products in the United States and abroad by providing technical assistance on product quality, safety, and public health impediments to the growth and stability of the U.S. fishing industry. Assure consumers of the safety, quality, and wholesomeness of seafood products. Reduce the U.S. fisheries balance of trade deficit by increasing exports of products from underutilized and traditional fisheries. Provide complete and prompt financial services to the U.S. fishing industry to ensure access to capital at reasonable rates and maturities.

Base Program

There is a great potential for future development and expansion of the commercial and recreational fisheries of the U.S. Marine fishery resources within the exclusive fishery jurisdiction of the U.S. will support annual harvests of approximately eight million metric tons, or an increase of approximately 250 percent above present harvests. The greatest expansion can occur in fisheries that are often bypassed by American fishermen, including Alaska bottomfish, squid, Pacific hake, and Gulf of Mexico coastal pelagics. The Magnuson Fishery Conservation and Management Act (MFCMA), the American Fisheries Promotion Act of 1980, and the Fish and Seafood Promotion Act of 1986 encourage the full use of available resources by the U.S. fishing industry. In the joint Government/industry efforts to use the renewable resources for the benefit of the Nation, it is industry's role to catch and market the fish. Government effort focuses on the safety of seafood, government to government trade relations, and operating an equitable management decision process that considers impacts on development as a criterion.

Grants to states -- This line item contains grants to states that were authorized under the Commercial Fisheries Research and Development Act of 1964 (P.L.88-309) as well as grants authorized by the Anadromous Fish Conservation Act of 1965 (P.L. 89-304). Effective October 1, 1987, P.L. 88-309 was replaced by the Interjurisdictional Fisheries Act of 1986 (P.L. 99-659, Title III).

Fisheries development program -- This line item supports NOAA's fisheries trade program addressing trade issues on an interagency basis working with the International Trade Administration, Office of the U.S. Trade Representative, and the seafood industry. This effort includes activities to resolve tariff and non-tariff barriers to trade, manage the Saltonstall-Kennedy Grant program, and carry out fisheries product safety and quality research.

Given the growing problems in the area of trade (deficit and relations) and the increasing call for trade sanctions, NOAA insures that policy makers have the best information possible and that the impacts of decisions and actions taken can be understood. This program supports objectives with respect to the fishing industry's competitiveness. NOAA is responsible for formulating trade strategy and positions on fishery products for bilateral and multilateral negotiations, and participates as the Department's fishing industry sector staff. Activities include providing technical expertise to support participation in Uruguay Round negotiations and U.S./Canada Free Trade Agreement implementation, and active bilateral efforts to reduce trade barriers (e.g., Japan and Korea). These efforts with the Japanese yielded increases in U.S. seafood exports of about $13 million in 1988. NOAA also provides support for actions under U.S. trade law, such as the ongoing U.S./Canada herring and salmon disputes and new activity under the 1988 Omnibus Trade and Competitiveness Act, as well as support for the Department's U.S. Foreign and Commercial Service activities in foreign countries.

The FY 1991 Fisheries development program will maintain a product safety and quality research capability in Charleston, SC, to support the voluntary inspection program, develop product standards, and conduct priority product safety research.

Financial services program administration -- Section 607 of the Merchant Marine Act of 1936 (46 USC 1177), authorizes the Fishing Vessel Capital Construction Fund program, and Section 4 of the Fish and Wildlife Act of 1956 (16 USC 742(c) (expired) authorized the Fisheries Loan Fund Program. The Capital Construction Fund allows fishermen to construct or reconstruct fishing vessels with before-tax, rather than after-tax, dollars. Fishing vessel owners, under terms of contracts with NOAA, can deposit their fishing vessel income in local financial institutions for purposes of buying, building, or reconstructing vessels. Federal income taxes are deferred, along with earned interest on deposit. The nominal value not real value, of deferred taxes are recaptured by reductions in the depreciable basis, for tax purposes, of vessels benefitting from this tax-deferral program. The fisherman receives a direct subsidy equal to the difference between the real value of dollars used for construction and the reduced dollar value recaptured later in taxes. NOAA also administers the portfolio from the Fisheries Loan Fund to collect outstanding loans owed the U.S. All collections go into miscellaneous receipts. The statutory authorization for this loan fund expired on September 30, 1986.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Fisheries development and utilization projects initiated or continued ($-K)	75	75	15
Fisheries development and utilization projects completed ($-K)	60	60	10
Number of new or revised product specifications and standards	3	3	4
Cumulative number of product specifications and standards operational at EOY	37	40	44
Number of trade consultations conducted	2	2	3

Decreases for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Grants to states	Pos./BA	0	$6,655	0	0	0	-$6,655
	FTE/Obl.	0		0		0	

A decrease of $6,655,000 (object class 41.0) is requested for NOAA's fisheries grant-in-aid programs and three interstate fisheries commissions. The grant program structure provides only limited Federal control to ensure Federal concerns are addressed; projects funded by these grants are more appropriately funded by the states. The grant programs involved are: the interjurisdictional fisheries grants ($3,500,000); the anadromous fisheries grants ($2,354,000); and, the striped bass grants ($471,000). Funding support for the three interstate fisheries commissions ($330,000) also is not requested.

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Fisheries development program..	Pos./BA	207	$12,254	121	$5,894	-86	-$6,360
	FTE/Obl.	216		130		-86	

Decreases totalling 86 positions and $6,360,000 are requested to reduce or terminate lower priority fisheries development activities. NOAA will serve as a catalyst for private sector initiatives in FY 1991 by providing a core product quality and safety research program.
A decrease of 86 positions and $4,400,000 is requested for product quality and safety research which is more appropriately performed by industry. This reduction will decrease research on the human health aspects of fishery product consumption, including those under DOC inspection. It will terminate utilization research at NOAA's fisheries research laboratories in Gloucester, MA; Seattle, WA; and Kodiak, AK, with work continuing at Charleston, SC, and Pascagoula, MS, at significantly reduced levels. Harvesters, processors, distributors and retailers that benefit from domestic and foreign consumer demand should provide the necessary quality and safety information. This reduction will result in closure of NOAA's fisheries research laboratory in Gloucester, MA.

A decrease of $942,000 (object class 25.0) is requested for fish oil research activities. This funding was provided in FY 1990 for producing refined fish oil which is then provided at no cost to the National Institutes of Health for use in medical research. This project should be funded by industry since they will directly benefit from products that this research is expected to generate.

A decrease of $188,000 (object class 25.0) is requested for Mahi Mahi export strategies in the Hawaiian Islands. Funds were provided in FY 1987 through FY 1990 to develop the market potential of Mahi Mahi and export strategies to compete in model markets. The work is anticipated to be completed in FY 1990 and therefore additional funding is not required. Continuation of this type of market analysis should be funded by industry since it is the direct beneficiary of increased markets.

A decrease of $500,000 (object class 25.0) is requested for shellfish water standards research, directed by a Congressional add-on in FY 1990. Since the majority of shellfish beds fall within state jurisdictions, this project should be continued by the benefiting coastal states. These states will also have complete access and control of the data management system.

A decrease of $330,000 (object class 25.0) is requested for the Model Seafood Inspection Program. Funds for this activity were provided by Congress from FY 1987 through FY 1990 to develop alternative systems for the inspection of fish and fishery products. This program is scheduled for completion during FY 1990.

Justification of Program and Performance

Activity: Oceanic and Atmospheric Research
Subactivity: Climate and Air Quality Research

Goals and Objectives

Goal: To more effectively manage the Nation's oceanic and atmospheric resources by increasing our understanding of oceanic and atmospheric processes through monitoring and research.

Objectives: (1) To develop a predictive capability for interannual and seasonal climate fluctuations for North America and other economically and scientifically important areas. (2) To establish a critical observational data base and a capability to analyze and predict changes in long-term climate and air quality due to natural and human causes, such as increasing levels of radiatively important trace species and acid rain.

Base Program

Interannual and Seasonal Climate Research: To achieve the first objective, NOAA's Interannual and Seasonal Climate Research effort focuses on programs with a high probability of early and useful results. NOAA's laboratory scientists and external investigators focus on the El Nino/Southern Oscillation (ENSO) phenomenon because interannual and seasonal climate variations in the Northern Hemisphere have been correlated with abnormal sea-surface temperatures characteristic of an ENSO event in the equatorial Pacific. Predictions of seasonal climate fluctuations are possible once these correlations are well defined, and the physical processes are understood. NOAA's strategy is to: (1) acquire the essential data; (2) develop diagnostic and predictive models related to changes in the equatorial oceans; and (3) establish the relationship of those changes to widespread climate variations through data analysis and modeling. Specific research activities include:

- The International Tropical Oceans-Global Atmosphere (TOGA) program is testing a theory that large-scale periodic oscillations, particularly the ENSO, are the principal drivers of short-term climate variations over North America and other economically important regions. The World Meteorological Organization (WMO) is coordinating and managing this nine country monitoring effort in the Pacific. For its part, NOAA has begun a 10-year monitoring program to observe the oceanic and atmospheric signatures of an El Nino event and a research program to develop the capability for operational interannual climate forecasts. In 1991, NOAA will complete installation of the Pacific observational network planned for TOGA.

- The Equatorial Pacific Ocean Climate Studies (EPOCS) program supports TOGA by investigating the influence of ocean processes (primarily in the eastern tropical Pacific) on interannual climate variations and by improving projections of climate variations associated with the Southern Oscillation. NOAA seeks to develop a capability for real-time analyses and projections (in association with the National Meteorological Center/Climate Analysis Center) and for operational tropical ocean analyses using coupled ocean-atmosphere models. The research includes (1) analysis of operational ocean circulation model simulations, (2) reanalysis of atypical occurrences of ocean-surface warming in the tropical Pacific, (3) field and analytical studies contributing to development of operational products, models, and empirical studies of tropical Pacific ocean-atmosphere interaction, (4) relation of tropical Pacific and middle-latitude climate anomalies, and (5) predictability of ENSO. Semiannual expeditions to the equatorial Pacific to measure equatorial currents, ocean surface and atmospheric parameters, and sea-level changes are part of this effort to establish a time-series data base.

- OAR's long-range weather and seasonal climate prediction research program is developing and testing monthly and seasonal climate models based on the First Global Atmospheric Research Program Global Experiment data set.

- The International Satellite Cloud Climatology Program (ISCCP) collects meteorological satellite imagery data to determine the effect of clouds on the Earth's radiation balance. The first step in ISCCP is to convert the vast quantity of satellite data into a form amenable to systematic analysis.

Long-Term Climate and Air Quality Research: Trends in long-term climate are influenced by natural processes and human-induced modifications of these natural processes. Human activities may threaten the long-term stability of Earth's climate by changing the global temperature and modifying atmospheric chemistry. These threats include: (1) introducing radiatively and reactively important trace species into the atmosphere, thus hastening the onset of the "greenhouse" effect, (2) reducing the ultraviolet shielding effect of the stratospheric ozone layer, thus jeopardizing human health, and (3) changing the acidity and oxidant levels at the Earth's surface, thereby affecting vegetation, surface waters, and soil.

NOAA monitors important atmospheric constituents and studies ocean dynamics and processes linked to global air quality and climate changes. NOAA's research programs focus on: (1) observing atmospheric greenhouse gases and key acidic and oxidizing gases and aerosols that play important photochemical, radiative, and chemically reactive roles; (2) determining the dynamics and transport of these chemical species in the atmosphere and oceans and their transport across the air-sea interface; (3) evaluating their impact on climate and the global chemical balance; and (4) making measurements to determine critical oceanic parameters affecting long-term climate. This research addresses NOAA's second objective for climate and air quality research. Specific research activities include:

- **The Subtropical Atlantic Climate Studies (STACS)**, which investigates oceanic heat transport, a key element in the natural global processes affecting long-term climate changes. Field efforts focus on the Florida and Antilles currents. An important part of STACS is developing monitoring techniques such as the continuous recording of the transport variations of ocean currents and their heat flux across the Florida straits by measuring voltage differences in a submarine cable.

- **The Geophysical Monitoring for Climate Change (GMCC) program**, which measures the background concentrations of some atmospheric constituents, such as carbon dioxide, ozone, methane, water vapor, and halocarbons, that may influence the "greenhouse" effect. NOAA will continue solar-radiation measurements of the variability in the ultraviolet, optical, and infrared spectra and automated gas chromatograph measurements of significant atmospheric constituents. Automated measurements also will be collected for additional gas species that may play a role in climate change.

- **The Radiatively Important Trace Species (RITS) program**, which supports research and monitoring to understand the trends, sources, sinks, and behavior of RITS (such as nitrous oxides, methane, and chlorofluorocarbons) and to determine the climatic and chemical consequences of these species. NOAA will continue its program to upgrade measurement programs for these compounds, including sampling and field studies along ocean tracks. Recognizing the importance of tropospheric ozone, NOAA will continue work to characterize the concentration and transport of ozone and ozone precursors in the troposphere, including work with other agencies and countries to establish a long-term monitoring network.

- **The atmospheric chemistry program**, which focuses on understanding the role of acids and oxidants, such as ozone. Although the formal, inter-agency National Acid Precipitation Assessment Program (NAPAP) ends in FY 1990, NOAA will continue to investigate acid precipitation, primarily through support of the National Trends and Global Trends Networks, which monitor acidic deposition and precipitation chemistry. NOAA also is addressing the role of oxidants in the formation of pollution. Specifically, NOAA's research has recently uncovered the role of manmade and natural processes in the formation of rural ozone, which, in high concentrations, can cause crop damage and other deleterious effects. NOAA is studying the formation, transformation, movement, and removal of atmospheric oxidants, as well as their trends and distributions, to place national policy on a sound scientific basis.

- Climate modeling research at the Geophysical Fluid Dynamics Laboratory (GFDL), which tests the sensitivity of air and ocean systems to changes in solar radiation, atmospheric and oceanic conditions, and trace substances. Ultimately, this research will lead to better predictions of climate variations by improved reliability of coupled ocean-atmosphere models. Ongoing work focuses on: global balances of heat, salinity, and carbon dioxide; seasonal variations in oceanic transport; and the response of tropical oceans to fluctuating winds in relation to the El Nino current phenomenon. In addition, NOAA is developing, testing, evaluating, and applying a three-dimensional dynamical, chemical, and radiative model to simulate the response of global chemistry and climate to changes in radiatively important trace species.

Climate and Global Change: NOAA's Climate and Global Change Program is an integral part of the interagency U.S. Global Change Research Program (USGCRP). As part of this national program, NOAA is addressing an important aspect of global change--the global climate--because changing climate confronts us with significant economic, health, safety, and national security implications. NOAA has a significant role in operational observation, prediction, and information management efforts for the national global change effort. NOAA's role derives from its statutory responsibility to predict climate change and to provide related data, information, and services to the public and private sectors, research community, and other Federal agencies. NOAA's role is continuing to be integrated with the roles of other agency participants in global change, (NSF, NASA, EPA, USGS, etc.) through the Committee on Earth Sciences (CES).

NOAA's broad goal is to establish a new national information service based on reliable assessments and quantitative predictions of changing global climate. Once established, this new service will help NOAA provide high-quality predictions and assessments to other Federal agencies, the public and private sectors, and the international community. The near-term objective is to provide reliable predictions of global climate change and associated regional implications on timescales ranging from seasons to a century or more.

NOAA's FY 1991 base program of $18 million is focused within the context of three key objectives of the U.S. Global Change Research Program:

- Establish an Integrated Comprehensive Monitoring Program for Earth System Measurements on a Global Scale:

  - Long-term observations: As part of a comprehensive program to predict climate change on timescales of seasons or longer, NOAA is expanding and more sharply focusing its environmental observing system. Base program resources are being used for such high-priority activities as operational ocean, global sea level, and stratospheric monitoring.

  - Climate data services: NOAA is developing climate data bases, data sets, and data fields specifically for NOAA's climate and global change program which meet user requirements and can be easily accessed by the global change community.

- Conduct Focused Studies to Improve Our Understanding of the Physical, Chemical, and Biological Processes that Influence Earth System Changes and Our Understanding of Global and Regional Trends:

  - Climate process studies: The predictive capability that NOAA seeks requires a program of focused research designed to understand and describe the critical processes or conditions that characterize changes in the Earth's climate system. The base program includes resources to address: interannual climate variability through the Tropical Oceans and Global Atmosphere (TOGA) program, biogeochemical studies with an emphasis on radiatively important atmospheric trace gases, and a new research program on the global hydrological cycle; ocean circulation studies; and investigations of the role and effect of ocean biochemical processes on climate including carbon cycling and marine sulfur production and cloud feedback.

- Develop Integrated Conceptual and Predictive Earth System Models

  - Climate diagnostics and prediction: The climate diagnostics and prediction element will ultimately become the central component of NOAA's role in the national global change effort. It synthesizes the results of the other elements into meaningful products--climate predictions, assessments, and related information.

__National Climate Program__: The National Climate Program was established by an Act of Congress in 1978, amended in 1982 and 1986. The program's goal is to improved our understanding of natural and man-induced climate processes and to make useful climate information available to the public, industry, and state and local governments. No FY 1991 funding is requested for the National Climate Program.

__Output Performance Measures__

	1989 Actual	1990 Estimate	1991 Estimate

Operational models/algorithms developed	2	2	4

Changes for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Interannual and Seasonal Climate Research	Pos./BA	34	$8,260	34	$8,260	0	0
	FTE/Obl	33		33		0	

Variable Ship Costs ($420,000) - Variable ship costs associated with this line item support 100 days-at-sea and are requested under the Marine Services Subactivity.

		1991 Base		1991 Estimate		Inc (+) or Dec. (-)	
Long-Term Climate and Air Quality Research	Pos./BA	230	$24,985	230	$23,498	0	-$1,487
	FTE/Obl	266		266		0	

A decrease of $1,487,000 (object class 25.0) is requested reflecting the expiration of the National Acid Precipitation Assessment Program (NAPAP) in 1990.

Variable Ship Costs ($315,000) - Variable ship costs associated with this line item support 75 days-at-sea and are requested under the Marine Services Subactivity.

Changes for FY 1991

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Climate and Global Change	Pos./BA	8	$17,914	48	$86,914	40	+ $69,000
	FTE/Obl	8		38		30	

An additional $69,000,000 and 40 positions will fulfill NOAA's FY 1991 focused program responsibilities in the U.S. Global Change Research Program (USGCRP). Plans for NOAA's Climate and Global Change Program are coordinated with the other participating agencies and OMB through the Committee on Earth Sciences.

Global environmental issues, addressed by the U.S. Global Change Research Program (USGCRP), remain among the Bush Administration's top domestic priorities. The FY 1991 budget request presents an INTEGRATED U.S. Global Change Research Program -- i.e., individual agency proposals for global change taken together represent an effective national effort aimed at the goals and objectives of the Program as laid out in OUR CHANGING PLANET. The NOAA program seeks to provide reliable predictions of changing global climate and regional implications on timescales of seasons to a century or more. With increased funds, NOAA's Climate and Global Change Program will build on the Agency's programs currently underway in the areas of environmental prediction and information management.

In recognition of the high priority placed on effective data management within the U.S. Global Change Research Program, NOAA's FY 1991 proposal includes a significant effort designed to ensure that NOAA fulfills its global environmental science data management responsibilities. NOAA must take action now, in concert with NASA and other agencies, to lay the data management framework for handling the enormous data streams associated with this effort. NOAA scientists will be evaluating and developing products from this data that will have a significant impact on the Nation's strategy with regard to Global Change Research Program. These products will have far-reach in socioeconomic effects. The goal of this activity is to improve the Nation's global change science and services through the creation and application of new data management capabilities. This goal is important to meet the coming challenges of new environmental data streams, the demands and importance being placed on historical data streams, and the new demands for qualitative improvements within our data management systems to adequately handle future data in terms of quantity, quality, broader access, integration, and analysis. NOAA's existing data stream holdings, when coupled with portions of EOS data, will provide for the creation of global data sets in support of the U.S. Global Change Research Program. NOAA must begin immediately to design its portion of the EOS data system, to prepare and to integrate its existing data bases, to develop algorithms for these new products, and to initiate exploratory research and development which will provide access to this data by U.S. scientists and policy makers.

The increase for NOAA's focused program responsibilities in the U.S. Global Change Research Program includes the following elements (organized by CES objective):

- Monitoring (Earth-System Measurements) ($21,800,000):
  - In-situ Ocean Observations include support for routine upper ocean and marine surface observations as well as specific NOAA contributions to interagency global ocean description efforts like World Ocean Circulation Experiment.
  - Global Sea Level monitoring fulfills NOAA responsibilities to establish and maintain an operational in-situ network and apply remote sensing technologies such as GEOSAT.
  - Stratospheric Monitoring enhances NOAA's anticipated contribution to the joint NOAA/NASA Network for the Detection of Stratospheric Change.
  - Climate Diagnostics and Data Base Development will lead to routine climate and global change information products derived from satellite and in-situ observations; the development of an operational climate data assimilation program; and analytic and diagnostic studies associated with detecting and assessing climate change.
  - Measurement Technique Development with explicit ties to the Climate and Global Change Program will improve the calibration and testing of new remote sensing instrumentation (including EOS) and provide initial NOAA contributions to the development of new measurement/observational techniques.
  - Long-term Observing System Planning represents NOAA's contributions to a planning effort to design the USGCRP's earth system measurement program.
- Focused Studies (Earth-System Processes) ($18,300,000):
  - Interannual Climate enhances the TOGA Program to address a specific set of ocean/atmosphere interaction problems and prepare for routine predictions;

- Biogeochemical Dynamics ensures full funding for the NOAA Radiatively Important Trace Species Program and enhances studies to understand the role of marine phytoplankton in the production of cloud-nucleating sulfur compounds;

- Ocean Dynamics and Circulation supports two specific areas of mission-directed research which, when combined with the ocean observation elements described above, provide for an integrated NOAA contribution to interagency efforts to obtain a large-scale description of the global ocean and improve our understanding of the role of ocean dynamics in the global climate system;

- Global Hydrological Cycle improves our understanding of the global hydrological cycle as it pertains to climate change on seasonal to interdecadal and longer timescales; this project will provide the focus for NOAA contributions to the International Global Energy and Water Experiment (GEWEX) proposed by the WMO; and

- Ecosystems Response supports ecosystems dynamics research directed at understanding the impact of changes in the global climate system on marine ecosystems and resources.

- **Earth-System Modeling and Prediction ($12,000,000):**

  - Ocean modelling supports a focused effort to make use of recent improvements in ocean models and ocean-related data sets in the development and implementation of operational ocean models;

  - Extended Range Forecasting enhances operational climate analysis and forecast capabilities; and

  - Modeling Centers supports participation in interagency efforts to encourage the development and application of predictive models and analytical products. This project includes resources to enhance operational climate analysis and forecasting capabilities.

- **Global Environmental Sciences Data Management ($16,900,000):**

  - Production of global-change sets support the production of new global-scale information products from new satellite and in-situ data sources and from historical data holdings;

  - Ocean and atmosphere platform data requirements supports NOAA requirements for product development, data preparation and validation, algorithm development, and prototype investigations in support of the Earth-Observing-System mission; and

  - Data Access and functional systems to qualitatively improve access by the U.S. scientific community to NOAA data holdings through research, development, and implementation of new functional capabilities for processing, understanding, and disseminating environmental data, metadata, and information products.

Variable Ship Costs ($430,000) - Variable Ship costs associated with this line item support 100 days-at-sea and are requested under the Marine Services Subactivity.

Changes for FY 1991

(dollar amount in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
National Climate Program	Pos./BA	9	$3,140	0	0	-9	-$3,140
	FTE/Obl	9		0		-9	

A decrease of $1,090,000 is requested for the National Climate Program Office (NCOP). The Committee on Earth Sciences (CES) has effectively replaced the NCPO as th coordinating mechanism for global change, and climate monitoring, research, and predictions. Funding for interagency administrative activities of the Office, therefore, is not required. Other activities conducted by the NCPO, such as experimental forecasting, will be funded through NOAA's climate and global change program.

In addition, a decrease of $1,800,000 (object class 41.0) is requested for six Regional Climate Centers located in New York, Illinois, Nebraska, Nevada, South Carolina, and Louisiana. The funding responsibility for state and regional programs should be shifted to the direct beneficiaries. A decrease of $250,000 (object class 41.0) also is requested to eliminate a Congressional add-on for the Intergovernmental Panel on Climate Change. U.S. participation in international climate activities will be supported through the Global Change Program.

Justification of Program and Performance

Activity: Oceanic and Atmospheric Research
Subactivity: Atmospheric Programs

Goals and Objectives

Goal: To provide the Nation with more accurate and timely forecasts and warnings of: (1) solar disturbances and their terrestrial effects and (2) weather events, particularly the severe weather which affects the Nation's economic productivity and causes loss of life and property.

Objectives: (1) To develop new cost-effective atmospheric observing systems, (2) to develop models that can improve our understanding and forecasting techniques for all types of weather, especially severe weather events, and (3) to provide improved forecasts and warnings of solar disturbances and their effects on communications, electronic navigation, power networks, space stations, and satellite systems.

Base Program

Weather Research--Improving our understanding of atmospheric physical processes and interactions of weather systems on all scales is essential to enhance the effectiveness of the National Weather Service (NWS) modernization. This research program has two major program elements:

1. Systems/Modernization. Improved forecasts and warnings require more frequent observations, faster communications, and better local data handling systems. NOAA is committed to major capital investments in remote weather observational systems, including NEXRAD Doppler radars, satellite, automated surface observations, and a central U.S. Wind Profiler Demonstration Network. Research is conducted to improve the spatial and temporal resolution of remote observations of the atmosphere and to integrate the resulting data into coherent four-dimensional physical descriptions of the atmosphere for use in weather forecasting research and operations. The primary research activities include:

- Development of profiling systems to remotely and continuously measure vertical profiles of wind speed and direction, temperature, humidity, and total water content. Specific efforts include (1) completing development, installation, and operation of 30 wind profilers; and continuing development of automated data-retrieval techniques using combinations of ground-based and satellite-borne wind profilers.

- Development of infrared Doppler multifrequency lidars as research tools to improve our knowledge of atmospheric winds, turbulence, aerosols, and moisture processes.

- Development of dual-polarization Doppler and multifrequency radars, Doppler lidars, and passive radiometers to study convective storms and their precedent conditions including in-cloud and entrainment processes.

- Improvement of short-range (2-12 hour) forecasting by introducing new local data system technologies and techniques into the operational weather services system. The Program for Regional Observing and Forecasting Services (PROFS) develops "tested" workstations for laboratory and forecast office environments to evaluate weather service requirements and prototype equipment such as Advanced Weather Interactive Processing System (AWIPS). Specifically, PROFS is developing capabilities to allow the forecaster to integrate, view, and manipulate observations from current and planned meteorological sensing systems using computer-assisted data display and synthesis techniques. The development of operational forecasting workstations for the modernization of the National Weather Service is a major focused effort of PROFS.

2. Forecasting Research. In addition to modernized observational systems and forecaster workstations, improved weather services require: (1) models based on sound mathematical and physical concepts of the atmosphere and (2) specific forecasting techniques. Scientific understanding of physical processes that govern the behavior of the atmosphere is essential to accurate models, which in turn, provide a tool for more accurate weather forecasts. Models also are important tools for generating National Meteorological Center forecast guidance. The specific activities include:

o Developing numerical models to simulate and predict the behavior of atmosphere in several spatial scales (synoptic weather, hurricanes, and mesoscale severe weather events). For example, the incorporation of advanced physics into the National Meteorological Center's (NMC) global model has led to an extension of 1.5 days in meaningful forecasting ability.

o Developing and implementing data-assimilation techniques using the products of new observing systems (e.g., profilers, NEXRAD), resulting in increased credibility in the model products.

o Working with NWS scientists to improve predictions by the National Centers and regional forecast and local service offices through field programs, data analysis and integration, algorithm development, and application of models. This activity will enhance the effectiveness of the National Weather Service modernization efforts.

o Investigating convective storms and their precursor conditions to better understand the processes involved in severe weather and developing prediction techniques and technology capable of increasing the lead-time and accuracy for NWS watches and warnings of storms that pose a significant threat to life and property.

o Undertaking field studies to determine the factors that influence hurricane development, track, and intensity variations and to improve hurricane prediction models.

o Providing grants to four states (Federal-State Cooperative Program in Weather Modification Research) for cloud-physics research and programs to evaluate techniques for increasing precipitation. The program is proposed for termination in FY 1991.

Solar Terrestrial Services and Research--Two major program elements are:

1. Forecasts and Warnings. NOAA's Space Environment Services Center (SESC), jointly operated by the Space Environmental Laboratory (SEL) and the Air Force Air Weather Service, engages in two principal activities:

o Real-Time Space Environment Monitoring by acquiring data on solar X-ray flux, energetic charged particles, and magnetic fields using space-environment monitors on GOES and polar-orbiting satellites. Data also are acquired from a ground-based magnetometer network and from National Solar Observatories (the USAF and Kitt Peak, Arizona), and the National Research Council of Canada and Australian solar observatories. Forecasts and Warning Activities by maintaining the national repository of real-time solar data, forecasts, and warnings; issuing forecasts and warnings to user, 24 hours/day, 7 days/week (over 1500 direct primary users); and disseminating products via telephone, teletype, commercial satellite broadcast, and weekly data summary bulletins. The SEL Data Acquisition and Display System (SELDADS) collects, processes, integrates, stores, and displays solar geophysical data from several national and international sources. Efforts will continue to improve SELDADS capabilities to speed the flow of worldwide information into and out of the SESC and to implement numerical forecast algorithms. SESC also is automating the analysis of synoptic maps of global solar magnetic structures to develop longer-term forecasts of solar activity. Under reimbursement, SESC provides specific support to major NASA missions.

2. **Technique Development**. Forecast and warning capabilities will be improved by developing the following:

- Advanced space-environment sensors (e.g., operational satellite sensors, such as the solar-wind monitor and the solar x-ray imager).
- Improved diagnostic and prediction techniques using data from the next generation of geostationary satellites.
- Theoretical models, both statistical and numerical, to forecast solar activity and disturbances affecting the earth.
- Improved sensor calibration and quality control.
- New statistical forecasting techniques for solar and geomagnetic activities.
- Numerical models, such as a magnetohydrodynamic model for propagation of solar-wind disturbances, which will be developed in cooperation with outside researchers.
- Expert systems for operational prediction of solar events.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Scientific publications (refereed)	150	150	142
Technical publications	30	30	26
Conferences - NOAA presentations	90	90	82
Workshop, conferences, and symposia sponsored	12	12	11
Major field experiments	1	1	1

Changes for FY 1991
(dollar amount in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Weather Research..	Pos./BA	300	$39,690	300	$35,594	0	-$4,096
	FTE/Obl.	291		291			

A decrease of $4,096,000 is requested within this line item: $1,883,000 for the Program for Regional Observing and Forecasting Service (PROFS); and $2,213,000 for Weather Modification State Grants.

A decrease of $1,883,000 is requested in PROFS. The PROFS mission to demonstrate techniques to integrate diverse data sets has been accomplished. These funds are not required as AWIPS moves from the definition phase to the development phase conducted by outside contractors. The remaining base of $1,883,000 will support the PROFS facility. Other researchers will be encouraged to use the facility for applications research on a reimbursable basis.

A decrease of $2,213,000 (object class 25.0) is requested for North Dakota/Utah/Nevada/Illinois weather modification grants, as well as the grant for preliminary work in Arizona. Results to date have not provided sufficient contributions to NOAA's mission to warrant continuing the program. Moreover, this type of state-oriented cloud physics and precipitation research is more appropriately the responsibility of the individual states receiving the direct benefits.

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Solar-Terrestrial Services and Research	Pos./BA	71	$4,705	81	$6,205	+10	+$1,500
	FTE/Obl.	68		76		+8	

An increase of 10 positions and $1,500,000 is requested to acquire and analyze solar-terrestrial data from new sources to provide and improve forecasts and warnings of solar disturbances.

By the February 1988 Presidential Directive on National Space Policy, NOAA (SEL) is the sole civil agency directed to "gather data, conduct research, and make predictions about the Earth's environment." The objective of the space-environment initiative is to allow SEL to meet the Nation's demand for the higher-quality space-environment services required to support the other efforts mandated by the Presidential Directive. This program to improve forecasting includes: immediate integration and application of new data sources vital to meet requirements for solar-terrestrial services; data technique development to improve monitoring and prediction; and research to better understand the physics of the solar-terrestrial system.

The Sun is the source of disturbances which produce damaging fluctuations in Earth's environment. SEL: (1) monitors the state of the sun, the interplanetary medium, and the ambient spacecraft environment and disseminates the data and indices to civilian and military users; (2) prepares and disseminates forecasts of solar-terrestrial conditions; (3) gives the data to the National Geophysical Data Center for archiving and for dissemination to the research community; (4) develops hardware and software to apply the data to improving forecast timeliness, accuracy, and applicability; and (5) lays the groundwork for future improvements in forecasting by performing research to understand the solar-terrestrial physics responsible for the creation of solar disturbances, their propagation through the interplanetary medium, and their effects on and within Earth's magnetosphere.

The Nation's successful use of space requires improved capability to measure and forecast the space environment. The National Space Policy envisions a Space Station, human exploration of the solar system, and a National Aerospace Plane. The commercialization of space for manufacturing, future space exploration programs, and defense reconnaissance and monitoring systems all depend upon measurements and forecasts of space environment conditions, including solar radiation events, that are more accurate and timely than currently available services. Failure to improve measurements and forecasts increases the risk of another avoidable major disaster occurring within our National Space Program.

The Nation is becoming increasingly dependent upon sophisticated electronic and other systems which can be affected by solar and geomagnetic activity. For example, in March 1989, major solar flares and their resultant geomagnetic storms caused: (1) NASA satellites in low-Earth orbit to lose altitude abruptly; (2) some NOAA satellites in low-Earth orbit to experience difficulty in maintaining attitude; (3) computer upsets in commercial spacecraft; and (4) the loss of electric power to 6 million people in Quebec. The service improvements and research outlined in this initiative will enable NOAA to provide reliable forecasts and monitoring which will allow for preventative actions.

Solar and geomagnetic activity will be at near-record levels in FY 1991 and for several years thereafter. Frequent solar flares, proton events, geomagnetic storms, and ionospheric disruptions will deleteriously affect communications, navigation, geophysical exploration, management of electrical power distribution networks, astronaut safety, satellite orbits, and other activities. It is anticipated that the following new and extremely valuable operational data on which this initiative is based will soon be available:

- Interplanetary scintillation data to track interplanetary disturbances in transit and give warning of geomagnetic storms.

- Vector solar magnetograms from research institutions for short-term flare forecasting.

- Improved energetic particle flux data from the GOES-I and subsequent satellites for spacecraft charging episodes.

- Solar wind speed, density, and magnetic-field data measured upstream from Earth to give "nowcasting" of geomagnetic storms;

- Images of the Sun taken in the light of soft x-rays for prediction of proton bombardments, geomagnetic storms, and heating of the terrestrial thermosphere.

Each new data stream--of enormous promise, beginning soon, and expected to continue indefinitely--requires new hardware, software, and techniques to ingest, use, archive, and perform research.

The proposed initiative contains several key elements:

- Increase forecasters' ability to specify and accurately predict the particle fluxes and geomagnetic variations in the near-Earth space environment. For example, observations of the plasma and magnetic field in the solar wind upstream of Earth will allow for a one-to-two-hour lead time in forecasting the onset, severity, and duration of geomagnetic storms which can disrupt satellite orbits, radio transmissions, and communications; solar x-ray images will enable evaluation of the geometric component of the proton bombardment threat to spacecraft and the National Aerospace Plane.

- Acquire computer hardware and software to carry out the operational, research, and technique development efforts.

- Carry out technique development based on research into the physical processes of solar and geomagnetic disturbances, leading to improved predictions.

- Implement expert systems using artificial intelligence techniques to provide numerical guidance to forecasters.

Justification of Program and Performance

Activity: Oceanic and Atmospheric Research
Subactivity: Ocean and Great Lakes Programs

Goals and Objectives

Goal: (1) To increase our understanding of coastal and marine processes for the purpose of predicting environmental changes. (2) Provide the technical basis for enhancing the Nation's marine economic sector.

Objectives: (1) To conduct research and technology transfer by capitalizing on the strengths of the existing network of in-house laboratories, universities and large national/international organizations to protect life and property, stimulate economic development, enhance competitiveness and foreign trade, and improve the quality of life for Americans and the global community. (2) To provide an economical and safe national capability for collecting in-situ data and making undersea observations essential to understanding marine physical, biological, and chemical processes.

Base Program

Marine Prediction Research - Supports NOAA's mission to improve the prediction and assessment of ocean, coastal, and Great Lakes processes, phenomena, and resources and to better use the resources of these areas. These research activities also involve a blending of capabilities existing in Federal laboratories, universities, and the private sector. Although observations comprise a major part of NOAA's marine research, numerical modeling is stressed as an integrating force to focus observational requirements, integrate knowledge, develop and improve quantitative prediction techniques, and aid in transferring research results to industry and to NOAA's operational services (e.g., NWS, NOS, NMFS). Marine research consists of two major program elements:

1. Marine Environmental Research - The following research is conducted to develop a sound scientific basis both for management, development, and use of coastal, estuarine, and Great Lakes waters and for understanding and predicting physical and chemical processes.

o Environmental processes research provides the scientific bases needed for sound environmental management. This research will make it possible to predict the impacts of our economical usage of coastal, estuarine, and Great Lakes waters. For example, NOAA has demonstrated that recirculation and sediment disturbances can keep pollutants active and biologically available longer than previously thought. NOAA is conducting research to understand the cycling, fates, and effects of toxic organics and nutrients and to determine the effects of human activities on the estuarine, coastal, and Great Lake habitats of fish and shellfish. NOAA will continue fundamental research to: (1) understand the relationships between physical and chemical variables and the productivity of estuarine and coastal ecosystems; (2) develop an understanding of how physical and biochemical processes in the estuarine and coastal environments affect the fates of pathogens and toxic chemicals introduced to these environments; and (3) develop and test models of contaminant behavior to support sound resource management decisions.

- **Seafloor processes research** is conducted to improve our understanding of the chemistry and thermal characteristics of the oceans, in particular the seafloor processes associated with hydrothermal vents found on the oceans' extensive volcanic ridges. NOAA's VENTS program seeks to identify vent systems, characterize the effluents, and develop an understanding of their life-history. These systems are now believed to have a significant effect on the thermal and chemical budgets of the overall oceans as well as on local circulation patterns. No funding is requested for VENTS in FY 1991.

- **Marine hazards and Lake hydrology research** improves the U.S. ability to: predict hazardous or special environmental conditions in the oceans, Great Lakes, and Alaskan Arctic; assess water resources of large lakes; and provide the information and data necessary for the safe and efficient use of the ocean, coastal, and Great Lakes areas. NOAA's major research activities will continue to improve the forecasting accuracy of: lake levels; hazardous winds, waves, and storm surges; and ice growth, movement, and breakup (results are transferred to NOAA operations (e.g. Joint Ice Center) for dissemination to international, Federal, state agencies, and to the public).

2. Marine Resources Assessment - This research provides the information and data to allow for the rational use and development of the marine resources of the Exclusive Economic Zone and the Fisheries Conservation Zone. The principal activity is fisheries recruitment research, which investigates the factors affecting the recruitment (or survival) of young year classes into the fishery stock. This research combines the talents and expertise of NOAA's fishery scientists, oceanographers, and meteorologists to understand the complex inter-relationships which affect fishery survival. The Fisheries-Oceanography Coordinated Investigations (FOCI) program seeks to identify and measure physical, chemical, and biological parameters affecting important fish stocks to determine how these parameters affect spawning, growth, survival, and recruitment. NOAA continues efforts in the Bering Sea and Gulf of Alaska to determine the effects of oceanographic variables on pollock. Data collected in the pollock-spawning area off Kodiak Island, particularly the data set on the 1985 year class spawned under unusual environmental conditions, are expected to be particularly valuable.

Sea Grant- The National Sea Grant College Program has developed a strong infrastructure of marine research and technology transfer at educational institutions. Although the previous Administration proposed terminating the program, this Administration requests funding for a restructured National Sea Grant College Program that focuses on NOAA-wide missions.

The objective of this program is to conduct research and technology transfer drawing upon a network of in-house laboratories and universities, and large national/international experiments to protect life and property, stimulate economic development, enhance competitiveness and foreign trade, and to improve the quality of life for Americans and the global community.

The original Sea Grant statute focused on support of marine resources and environmental research at the grassroots level. Over the past decade, through a series of management and legislative changes, the program has positioned itself to assume many of the mission-related marine R&D responsibilities. This evolution is consistent with the maturing of the Sea Grant network capability to address national issues. The National Sea Grant College Program is well poised to contribute to two NOAA initiatives - Global Change and Coastal Oceans. Sea Grant can draw upon a vast, existing network of over 200 participating institutions and more than 3,000 scientists, engineers, and students to focus on these timely and strategic climate, ocean, and coastal initiatives. Additionally, the Sea Grant program entrains approximately $29,000,000 in non-Federal and $4,500,000 in other agency pass-through funding to work on R&D of high NOAA and national relevance.

o The refocused Sea Grant program includes the following elements:

- **Environmental Studies:** Research on marine habitat studies, environmental processes, Great Lakes ecosystems, wetland rehabilitation, coastal productivity and a variety of chemical studies that relate to toxic and eutrophic contamination and gaseous exchanges related to global change. This research also is the underpinning of the environmental quality component of NOAA's Coastal Ocean Program.

- **Living Resources:** Research on a variety of animal and plant aquatic species, processes of fisheries recruitment and development, marine biotechnology related to developing new pharmaceutical and industrial feedstocks from the sea, and genetic engineering relevant to a variety of end uses from improving stocks of fish, mollusks, and crustaceans for human consumption to microorganisms for pollution abatement. This research area also includes a variety of programs in seafood science and technology to improve the shelf-life and healthfulness of seafood. This research contributes directly to NOAA's Coastal Ocean Program in biological and fishery productivity.

- **Non-Living Resources:** Geological and geophysical research that relates to the dynamics of coastal waters (coastal hazards) and the geological and environmental processes that affect coastal and beach stability (coastal processes) and the formation and distribution of mineral resources. Due to the critical relevance of in-situ observations to these studies, needed research in diving technology and physiology is also conducted.

- **Technology Transfer:** Comprehensive approach to technology transfer in the furtherance of NOAA missions and goals. This includes education at the graduate and post-doctoral level, public education, and specialized fellowships as well as basic research in marine policy and related ocean and coastal law, and social sciences. Specialized communication/networking and policy analysis on issues of national importance (e.g., marine debris, non-degradable pollution, and fishing boat safety) are a major focus for advisory service activities.

- **Marine Technology and Commercial Development:** Support ongoing programs in marine economics research, ocean engineering and marine transportation/ports systems. A recent appraisal of documentable Sea Grant dollar contributions to the national economy in 1987 was conservatively estimated to be $842,000,000--over twenty times the Federal investment! This figure does not include non-cash contributions to the national economy or health and welfare of the citizenry.

Undersea Research Program -- The goals of the National Undersea Research Program (NURP) are to maintain and operate undersea research facilities and platforms and to transfer technology and information produced by undersea marine research to those working in the undersea environment. No funding is requested for the NOAA Undersea Research Program in FY 1991.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Scientific publications (refereed)	593	610	443
Technical publications	240	247	99
Conferences - NOAA presentations	13	13	12
Workshops, conferences, and symposia sponsored	65	70	25
Major field experiments	12	11	0
Operational models/algorithms developed	1	1	1

Decreases for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Marine Prediction Research	Pos./BA	182	$16,074	181	$11,532	-1	-$4,542
	FTE/Obl	179		178		-1	

A total decrease of one position and $4,542,000 is requested within this line item: $1,600,000 for the Great Lakes Environmental Research Laboratory, $2,000,000 and one position for VENTS, and $942,000 for the Southeast Fisheries Oceanography-Coordinated Investigations.

A decrease of $1,600,000 is requested for the Great Lakes Environmental Research Laboratory (GLERL). This laboratory conducts environmental research with special emphasis on developing prediction tools for improved Great Lakes impact assessment and forecasting. In order to focus Federal expenditures on activities that are clearly the responsibility of the Federal Government, this proposal will reduce Great Lakes hazards and related research, particularly research on ice hazards, surface waves, and water level fluctuations, and will also reduce research related to pollution of the Great Lakes. Since these research activities are providing services specifically for the states surrounding the Great Lakes, those states and the private sector interests which derive direct benefit from these studies should assume a greater share of funding responsibility. The remaining research in the Great Lakes will enable the United States to meet the terms of the 1978 U.S.-Canada Water Quality Agreement.

A decrease of $2,000,000 and one position is requested for the VENTS research program. Research previously conducted by NOAA, other Federal agencies and universities already provide an understanding of seafloor spreading processes. Furthermore, economic and legal circumstances indicate that commercial development of seafloor mineral deposits is unlikely in the near future.

A decrease of $942,000 (object class 41.0) is requested to terminate the southeast Fishery Oceanography-Coordinated Investigations (FOCI) program which conducts fisheries recruitment research off the southeast coast of the United States. The Congressionally mandated southeast FOCI research program primarily passes through funds to the University of Miami to study fish in State waters. Unlike the northwest FOCI program, the southeast FOCI programs serves no Federal purpose and should be funded by the State or locality which directly benefits.

Variable Ship Costs ($561,000) - Variable ship costs associated with this line support 165 days-at-sea and are requested under the Marine Services Subactivity.

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Sea Grant	Pos./BA	30	$42,257	30	$27,498	0	-$14,759
	FTE/Obl	28		28		0	

A total decrease of $14,759,000 is requested within this line item: $13,300,000 for the National Sea Grant College Program, $1,177,000 for the National Coastal Resources Research and Development Institute and $282,000 for the U.S./Asia Aquaculture Science Exchange Program.

A decrease of $13,300,000 (object class 41.0) is requested as a result of refocusing the National Sea Grant College Program to concentrate on conducting only priority research and technology transfer for NOAA. The request would fund the research program approximately at its historical level. No funding is requested for the Marine Advisory Service (MAS) Agents. MAS Agents, who typically are stationed in the various coastal counties and serve as information/technology-extension personnel, would no longer receive Federal support. Instead, their support would be expected to come entirely from state, local, and private sources. MAS "Specialists" who engage in applied research relevant to NOAA's mission would continue to receive Federal support.

A decrease of $1,177,000 (object class 41.0) is requested for the National Coastal Resources Research and Development Institute. These passthrough funds are provided to conduct marketing activities and promote certain segments of the fishing industry. This is an inappropriate role for the Federal Government. These efforts should be funded by private industry.

A decrease of $282,000 (object class 41.0) is requested for the U.S./Asia Aquaculture Science Exchange program. An information exchange to promote aquaculture business ventures is not an appropriate NOAA role. This program should be funded by the non-Federal and private-sector organizations which will receive direct benefit.

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Undersea Research Program	Pos./BA	9	$14,662	0	0	-9	-$14,662
	FTE/Obl	7		0		-7	

A total decrease of nine positions and $14,662,000 is requested within this line item: $14,285,000 for the National Undersea Research Program and $377,000 for the Tropical Research facility in Key Largo, Florida.

A decrease of nine positions and $14,285,000 is requested to terminate the NOAA Undersea Research Program. Specifically, this decrease will terminate funding for: the use of deep and shallow-water submersibles; NOAA support (one-fifth) of the Navy-owned, deepsea research vessel ALVIN; studies of undersea diving techniques and equipment; biomedical research grants; and NOAA support of five undersea research programs administered regionally by the University of Connecticut at Avery Point, the University of North Carolina-Wilmington, the University of Hawaii, the Fairleigh Dickinson University, and the Caribbean Marine Research Center, and a west coast Undersea Research Program currently administered by the NURP headquarters in Rockville, Maryland. These programs should be funded from private and state resources or by other Federal agencies.

A decrease of $377,000 (object class 41.0) is requested to terminate Federal funding for the Key Largo Tropical Research Facility. This program should be supported by state and local governments and private sources which would receive direct benefit from the facility's research. The focus of the activities by this Facility is not central to NOAA's mission.

Justification of Program and Performance

Activity: National Weather Service
Subactivity: Operations and Research

Goals and Objectives

Goals: To provide timely and accurate meteorological, hydrologic, and oceanographic warnings, forecasts, and planning information to ensure the safety of the population, mitigate property losses, and improve the economic efficiency of the Nation.

Objectives: To improve the timeliness and accuracy of meteorological, hydrologic, and oceanographic services by developing new techniques and procedures, applying new technology, and improving methods of disseminating information to reach more people promptly in warning situations.

Base Program

NOAA provides around-the-clock weather and flood warning and forecast services to the public for the protection of life and property and to meet the needs of all segments of the economy. Weather services are provided by a nationwide network of offices that collect data, prepare state and local warnings and forecasts, and disseminate information to the population both directly and indirectly through the mass media. Data, analyses, forecasts, and outlooks used by field forecasters to prepare local forecasts are centrally processed by the National Meteorological Center (NMC). The NWS core mission also depends on the study, development, and testing of new methods for improving basic warning and forecast capabilities through research.

Local warnings and forecasts: Local weather services are provided through a national network of 52 Weather Service Forecast Offices (WSFOs), 220 more localized Weather Service Offices (WSOs), and 13 River Forecast Centers (RFCs).

o Weather warnings and forecasts: Both WSFOs and WSOs issue local warnings of severe weather such as hurricanes, tornadoes, severe thunderstorms, flash floods, and extreme winter weather.

    - WSFOs prepare forecasts for zones which are comprised of several counties that experience similar weather. Each WSFO has forecast responsibility for several zones which, together, comprise an area the size of an average state. WSFOs issue zone forecasts 4 times daily for a period out to 48 hours; a generalized statewide forecast twice daily; and a more general, extended 5-day forecast on a daily basis. WSFOs also provide the main field forecast support for the marine and aviation programs as well as guidance for the fire weather program.

    - All counties in the United States are assigned to specific WSOs or WSFOs for warning purposes. These offices issue and distribute local warnings of severe weather for their assigned counties. WSOs adapt generalized weather forecasts to local areas and issue severe weather and flash flood warnings.

- To prepare local warnings and forecasts, WSFOs use forecast guidance prepared by the National Meteorological Center (NMC) that is based on worldwide meteorological observations. The National Severe Storms Forecast Center (NSSFC) and the National Hurricane Center (NHC) also provide central support for the local warning program.

- Weather Service Meteorological Observatories (WSMOs) are additional sources of data for surface observations, upper air observations, and/or radar data. These observations are also used in the NMC data base for generating guidance products used by field forecasters.

o River and flood warnings and forecasts: RFCs prepare guidance used by WSFOs, and WSOs to issue flash flood watches, warnings, and river forecasts. RFCs provide forecasts of river stage and flow and related products and services for use by water resources managers and other users. Most WSFOs and WSOs support the RFCs by collecting and relaying hydrologic data. NMC provides central support to RFCs by forecasting the movement of large storms that are causing significant precipitation.

o Marine weather services: Using weather analysis and forecast guidance provided by NMC, marine weather forecasters at coastal and Great Lake WSFOs issue wind, wave, weather, and ice warnings, forecasts, and other information for the population living and working along the sea coast, off-shore, on the Great Lakes and the high seas. Principal products include small craft advisories, gale, storm, tropical cyclone, and storm surge warnings; coastal, off-shore, and high seas forecasts; sea and swell forecasts; sea and lake advisories; and special weather forecasts to aid in the containment and clean up of oil spills and other hazardous substances in the marine environment. Legislation will be proposed to permit the Marine Weather Services Program to be financed from a Harbor Maintenance Trust Fund transfer to the proposed Marine Waterways Trust Fund. The Harbor Maintenance Trust Fund was established by P.L. 99-662, Title XIV and derives its revenue from a user fee on commercial cargo. The proposed legislation will increase the fee to provide the necessary additional revenues. Under this proposal the Marine Weather Services Program would be funded by a reimbursement to the OR&F account from the Marine Waterways Trust Fund.

o Agricultural weather services: NWS provides the Nation with agricultural weather services, including observations, forecasts, warnings, and farm advisories. Its aims are to improve agricultural efficiency, conserve energy, and protect the environment. As part of the agricultural weather services, NWS issues warnings of low temperatures injurious to winter and spring crops, particularly in citrus and deciduous fruit-growing areas. The 1991 budget proposes that users of these specialized services purchase them directly from the private sector.

o Fire weather services: Designated NWS offices provide weather warning, forecast, and advisory services to Federal, state, and local wild land management agencies to support wildfire control and suppression activities. Localized weather forecasts are issued, as required, during a fire. NWS offices also provide site-specific forecasts and advisories to Federal natural resource agencies for prescribed burning and smoke management, insect and disease control, planting and cultivating new growth, preservation of watersheds, and promotion of wildlife habitat and recreational facilities. The 1991 budget proposes that state and local users of these specialized services purchase them directly from the private sector.

o Tsunami warnings: Tsunami watches and warnings for Pacific Ocean areas and Alaska are prepared and issued by the Tsunami Warning Center at Ewa Beach, Hawaii, and the regional center at Palmer, Alaska. NWS collects and analyzes observational data from an international network of seismological observatories and sea level observing stations which operate on a cooperative basis. The centers use the data to prepare watches and warnings covering all U.S. territories and states bordering on the Pacific Ocean and disseminate them to WSFOs, Federal and state disaster agencies, military organizations, private broadcast media, and other facilities that furnish warning information to the public.

Central forecast guidance: Over the last several decades, NOAA has made major improvements in forecasting synoptic-scale (large-scale, slowly evolving) weather. With continuing improvements in larger scale, centrally prepared weather guidance products for day 2 and beyond; implementation of NWS systems upgrades; advanced observations from the planned geostationary and polar-orbiting satellites; and the development of mesoscale predictive techniques for NWS field operations, NOAA can implement significant improvements in the severe weather and flood warnings program.

- o General weather guidance: The National Meteorological Center (NMC) provides centralized processing of data, analyses, forecasts, and outlooks required by field forecasters as a basis for local forecasting. The Center, using numerical forecasting techniques run on large computers, provides the NWS, other government agencies, private industry, and foreign users, with guidance forecasts covering periods out to 10 days. When necessary, NMC provides guidance in tracking hurricanes (to 72 hours) and in forecasting the movement of large storms causing significant precipitation.

  In the course of its 24-hour-per-day, year-round operation, NMC receives approximately 50,000 daily surface observation reports from land stations, 3,000 reports from ships, 4,100 upper air observations, and 3,000-4,000 reports from aircraft. Weather satellites provide cloud images, atmospheric temperature soundings, and sea-surface temperatures. Ocean buoys provide additional information on sea temperatures, ocean currents, and air-sea interactions. These data are processed, catalogued, used in the various forecast guidance model runs, and distributed widely to field offices, other government agencies, private subscribers, and overseas users.

  NOAA will continue to incorporate improvements in general weather guidance by:

  - Implementing second generation Regional Analysis and Forecast Systems (RAFS) models with higher resolution and improved physics to forecast more accurately severe thunderstorms, heavy rain, and snow;
  - Implementing second generation hurricane models to predict with more precision the development and movement of hurricanes; and
  - Continuing improvements in 1 to 2 day and 3 to 10 day forecasts through acquisition of increased computer capacity to handle state-of-the-art physics, increasing resolution, and analysis.

- o Severe storm guidance: The National Severe Storms Forecast Center (NSSFC), in Kansas City, MO, prepares and releases messages of expected severe local storms, including tornadoes. These Tornado or Severe Thunderstorm Watches, include information for public use and aviation services. NSSFC meteorologists continuously monitor weather developments and issue watches when needed. NOAA will continue to develop systems application programs designed to streamline use of the satellite and numerical weather prediction data by forecasters to improve severe storm guidance.

- o Hurricane guidance: Two Hurricane Forecast Centers forecast the path and intensity of hurricanes, other tropical disturbances, and associated sea conditions. These two centers are the National Hurricane Center (NHC) in Miami, FL, and the Central Pacific Hurricane Center (CPHC) in Honolulu, HI. A portion of NHC's responsibility for public warnings rests with the Hurricane Warning Office at San Juan, PR. NMC provides forecast guidance on the track and intensity of hurricanes based on numerical models.

  Special hurricane forecasting staff at NHC base their predictions, advisories, and warnings on subjective and objective methods. The hurricane forecasting functions at the NHC and CPHC are integrated with the regular forecasting functions of the Weather Service Forecast Offices at which these Centers are located. NOAA will continue to improve hurricane guidance through development of techniques and programs that maximize use of satellite data and through implementation and calibration of storm surge models.

- Long range (climate) guidance: The Climate Analysis Center prepares monthly and seasonal (90-day) outlooks; collects and analyzes data to depict current anomalies of climate; and develops predictive techniques, performs diagnostic studies of large-scale climate anomalies, and conducts stratospheric research, all to improve accuracy of climate outlooks. NOAA will continue to incorporate improvements in long-range climate guidance.

Atmospheric and hydrological research: NWS conducts applied research, building upon the more basic research conducted by NOAA laboratories and the academic community. Applied meteorological and hydrological research is integral in providing more timely, accurate weather and flood warning and forecast services to the U.S. public.

- Meteorological research: NWS will conduct meteorological research to develop, test, evaluate, and improve numerical models and analysis/forecast techniques used in weather and climate prediction including:
  - Techniques for predicting mesoscale phenomena (e.g., heavy precipitation, tornadoes, and severe thunderstorms). These techniques will be developed and improved to use digital data from new observing systems such as NEXRAD (Next Generation Weather Radar) with doppler capability, and GOES-NEXT (geostationary satellites with higher resolution).
  - Models to improve hurricane tracking, hurricane probability estimates, and tropical analyses.
  - Storm surge models to assist in developing hurricane evacuation plans for coastal basins.
- Hydrological research: NWS will develop improved hydrologic and hydrometeorological models and procedures in support of the national flood forecasting and water resources forecasting programs including:
  - Improvements to the extended stream flow prediction model and its complementary models in the National Weather Service River Forecast System;
  - Specialized flood and flash flood forecasting procedures using linked hydrological and meteorological models; and
  - Algorithms to combine NEXRAD precipitation estimates with data from satellites and other ground-based observation systems.

Modernization and Associated Restructuring: The NWS has begun the process of modernization and restructuring which was prompted by two factors: (1) the need to apply advances in hydrometeorological science and technology to operational forecasting, and (2) the need to replace obsolete and increasingly unreliable equipment.

These factors offer the opportunity to improve severe weather and flood warnings and forecasts through the acquisition of the following new, technologically advanced systems:

- Automated Surface Observation Systems (ASOS) to reduce time-consuming manual observations, provide continuous weather watch, and permit increased staff productivity;
- Next Generation Weather Radar (NEXRAD) with doppler capability and sophisticated software to provide nationwide coverage for timely and accurate detection of severe weather and floods;

- o Advanced Weather Interactive Processing System (AWIPS) to enable local forecasters to integrate, process, and transmit high-volume radar, satellite, upper air, surface observation data and guidance information; and
- o Class VII computer power at the NOAA Central Computer Facility to accommodate advanced numerical weather prediction models and increased data to improve accuracy of forecast guidance.

These systems upgrades, coupled with observations from planned, advanced geostationary and polar-orbiting satellites and newly developed mesoscale forecasting techniques, will greatly improve the timeliness and accuracy of severe weather and flood warnings to the U. S. public. Improved capability to detect and predict the small-scale, short-lived (mesoscale) phenomena which cause the most destructive weather events will increase warning lead times for severe thunderstorms, tornadoes, high winds, and flash floods, as well as reduce false warnings.

A Strategic Plan for the Modernization and Associated Restructuring of the National Weather Service was submitted to Congress in 1989. Implementation of the plan will optimize efficiency and effectiveness of the mesoscale warning and forecast program. It also will include an operational demonstration and evaluation program as required by Public Law 100-685 to refine operational procedures and resolve implementation issues best addressed through actual field experience. Continued improvements in larger scale, centrally prepared weather guidance products for day 2 and beyond through advanced forecasting models and the requested increased computer processing capability are essential to successful implementation of mesoscale forecasting in NWS field operation, where field forecasters will concentrate on the small-scale, short-lived processes that occur in the zero to 36 hour time-scale.

The National Implementation Plan, submitted annually to Congress, will provide a planning framework and general strategies for accomplishing the transition. The interrelationships of all of the activities--facilities preparation, staffing augmentation, training, commissioning of systems, and realigning operations and services--have been planned so that the demonstration can begin in FY 1993. In addition to preparations for the demonstration, nationwide planning and implementation have begun. Facilities preparation is on-going. Training schedules for field personnel are being planned with necessary backup personnel to cover operational shifts. Software development continues. New communication channels are being established. All NWS offices are working on detailed site plans for the transition.

The NWS modernization effort involves internal NWS activities and multiple contractor efforts. Internal activities include the provision of land, facilities, software, training, staffing, and new operational procedures. Major system upgrades are being procured through external contractors which also provide software and training related to the system operation.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec(-)	
Local warnings and forecasts	Pos./BA	2,951	$259,126	2,880	$261,851	- 71	+$ 2,725
	FTE/Obl.	3,376		3,311		- 65	

NOAA requests an increase of 38 positions and $11,000,000 for the Modernization and Associated Restructuring Demonstration and Implementation (MARDI) program to prepare for the multi-site operational demonstration required by Public Law 100-685. This funding is necessary to prepare for implementation of the modernization program nationwide in a manner consistent with the certification requirements of Public Law 100-685.

Modernization and Associated Restructuring Demonstration: In order to ensure a successful Modernization and Associated Restructuring Demonstration (MARD), a number of preparatory activities will be accomplished prior to the actual demonstration. MARD office staffs will be supplemented with additional meteorologists and scientific education on the interpretation of new data sources, such as doppler radar. Mesoscale forecasting techniques will be provided for meteorologists and hydrologists at these MARD offices. In addition, the new technology systems must be deployed, integrated with not only each other but also existing systems at the MARD offices, and commissioned to ensure that each performs its unique, but complementary role in supporting modernized operations. All of these activities must be completed with sufficient lead time to allow the MARD offices to stabilize and become proficient in the Weather Forecast Office (WFO) mode of operation prior to the start of the formal demonstration.

A formal MARD evaluation program also is planned to take place in parallel with the formal demonstration to provide results for the certification process. The Secretary of Commerce must certify that no service degradation will occur in areas served by offices that are to be consolidated as part of national implementation of modernization and associated restructuring. As specified in Public Law 100-685, the results of MARD will be critical evidence for this certification.

National Implementation: Field restructuring will proceed after MARD is completed, though there are a number of activities associated with national implementation that must be accomplished before, during and after the demonstration. Funding will be provided by other budget initiatives for some of these activities such as system user training, covered in each of the new technology programs. MARDI will cover other national implementation activities for which no other source of funding exists. NWS experiences both office and personnel relocations every year, and funding for these is covered by the NWS base budget. Because of the magnitude of the modernization and associated restructuring program, there will be an increase in the number of office and personnel relocations. Additional funding is proposed to cover these increased costs.

A comprehensive scientific education program will be conducted to prepare all NWS forecasters to understand atmospheric dynamics that define the development of fine scale weather phenomena. Meteorologists and hydrologists must understand what the high volume, high resolution data sets provided by the new technologies mean and how to interpret and integrate these data sets. Scientific education will also concentrate on use of mesoscale forecasting techniques in preparing warnings and forecasts.

As described above, Public Law 100-685 requires certification that no service degradation will occur in an area as a result of office consolidation. This requirement constrains the ability of the NWS to shift staff from offices not slated to become WFOs to newly opened WFOs as these new WFOs come up to speed and are able to assume increasing responsibility. Therefore, MARDI provides a temporary staffing augmentation during the transition period.

A decrease of 109 positions and $8,275,000 is requested as follows:

- WSFO Staff Reduction.................	35/-787	- Fire Weather............	-8/-470
- Consolidate Southern Region HQ......	-18/-852	- Susquehanna River.......	0/-700
- Data Buoy Maintenance................	0/-565	- Colorado River..........	0/-300
- Data Buoy Center.....................	0/-540	- Contract Observers......	0/-200
- Consolidate Pacific Region HQ.......	-11/-383	- Equipment Maintenance...	0/-1,054
- Agriculture and Fruit Frost.........	-37/-2,424		

Thirty-five positions and $787,000 represent reductions in staff at 8 Weather Service Forecast Offices (WSFO's). This reduction will not effect station hours of operation.

Location: Positions will be reduced at the following NWS offices:

Juneau, Alaska
Albany, New York
Portland, Maine
Lubbock, Texas
San Juan, Puerto Rico
Milwaukee, Wisconsin
Cheyenne, Wyoming
Reno, Nevada

NWS proposes to streamline its management by reconfiguring the current four-region management structure (for the lower 48 states) into a three-region structure. This will permit savings of 18 positions and $852,000. The Southern Region Headquarters in Fort Worth, Texas, will be consolidated with the NWS Central Region Headquarters in Kansas City, Missouri and the Eastern Region Headquarters in Garden City, New York. The Central and Eastern Region Headquarters staff will be augmented to ensure continued effective management of field operations.

Location: The Fort Worth, Texas, NWS Regional Headquarters will be closed but the WSFO in Fort Worth will remain in operation.

Savings of $565,000 (object class 25.0) will be achieved by discontinuing maintenance of the four non-essential moored buoys suurrounding Hawaii. A reduction of $540,000 (object class 25.0) is requested for the NOAA Data Buoy Center (NDBC) to realign staffing and anticipated workload.

NWS proposes to further streamline management by consolidating managerial functions of the Pacific Region Headquarters and the Alaska Region Headquarters Offices. This will permit savings of 11 positions and $383,000. The new Pacific-Alaska Region Headquarters will be located in Anchorage, Alaska. The existing Pacific Region Headquarters Office in Honolulu, Hawaii, will be converted to a logistics support office for the southern portion of the Pacific-Alaska Region. The consolidation will streamline NWS management and support functions and does not affect provision of weather services.

Location: Positions will be reduced at the Honolulu, Hawaii, NWS Regional Headquarters.

A savings of 29 positions and $1,745,000 will result from eliminating the specialized agricultural weather services program. At the direction of Congress and the expense of the general taxpayer, NWS provides specialized weather warnings, forecasts and advisories to profit making farming and ranching operations. These services are readily available for purchase from the private sector. NWS will continue to provide generalized public service weather forecasts to support agricultural operations, including the collection of observations at key points through a mix of automatic observational equipment, contract observations, and telephone answering equipment. Agricultural Weather Service Centers (AWSCs) and WSOs that primarily provide agricultural weather services will be closed and agricultural weather staff will be reduced.

Location: Office closures and position reductions will occur at the following NWS offices:

Closures Proposed

AWSC, College Station, Texas
AWSC, Stoneville, Mississippi
AWSC, Lafayette, Indiana
AWSC, Auburn, Alabama
WSO, Riverside, California
WSO, Yuma, Arizona
WSO, Twin Falls, Idaho

Staff Reduction Proposed

WSO, Grand Rapids, Michigan
WSO, Brownsville, Texas
WSFO, Great Falls, Montana
WSO, Wenatchee, Washington
WSFO, Salt Lake City, Utah
WSFO, Portland, Oregon
Camp Springs, Maryland

A decrease of 8 positions and $679,000 will result from eliminating the specialized fruit frost program. NWS provides a limited group of profit making companies, at the general taxpayers' expense, with specialized frost and freeze warnings and advisories. These profit making companies should purchase those specialized services from the private sector, where they are readily available. Public fruit frost forecasts will continue to be available to growers to aid in making decisions concerning crops.

Location: Position reductions will occur at the following WSOs:

Riverside, California
Tampa Bay, Florida
Brownsville, Texas

A decrease of 8 positions and $470,000 in the fire weather services program is proposed. NWS provides, at taxpayer expense, specialized forestry management services to non-Federal users, including advisories for controlled burning, pest management, and reforestation on non-Federal lands. Users of these specialized services should purchase site specific information directly from the private sector or through reimbursable arrangement with NWS. NWS will continue to provide support for very large, dangerous wildfires and for Federal forestry management activities such as controlled burning, pest management, and reforestation.

Location: Positions will be reduced at the following NWS offices:

Redding, California
Fresno, California
Boise, Idaho
Cheyenne, Wyoming
Camp Springs, Maryland
Silver Spring, Maryland

Reductions of $700,000 and $300,000 (object class 25.0) are requested for the Susquehanna and Colorado River Basin flood warning systems respectively. The equipment to provide these enhanced, localized services were installed at the general taxpayers' expense. The routine maintenance of these systems should be the responsibility of the state or region, as is the case with numerous similar flood warning systems across the country.

A reduction of $200,000 (object class 25.0) is requested for Congressionally mandated Stampede Pass, Washington; Sexton Summit, Oregon; and Blue Canyon, California contract observers. Observations will be maintained through the operational automated observing system at those locations.

A decrease of $1,054,000 (object class 41.0) is requested for equipment maintenance reflecting a stretch out of the maintenance schedule.

Justification of Program and Performance

Activity: National Weather Service
Subactivity: Systems Acquisition

Goals and Objectives

Goals: To provide timely and accurate meteorological, hydrologic, and oceanographic warnings, forecasts, and planning information to ensure the safety of the population, mitigate property losses, and improve the economic efficiency of the Nation.

Objectives: To develop, acquire, and implement major new systems to modernize the National Weather Service in order to provide more timely and accurate weather and flood warnings and forecasts.

Base Program

Consistent with the goal of providing more timely and accurate weather and flood warning and forecast services to the U.S. public, NOAA proposes to modernize the national weather system during the 1990s through the acquisition of technologically advanced systems:

- NEXRAD (Next Generation Weather Radar) will replace existing obsolete weather radars and enhance severe weather and flood warnings. Nationwide implementation of this advanced doppler radar warning system can increase tornado warning lead times from the current average 1-2 minutes to 20-30 minutes and, equally important, reduce false warning rates. Also, more accurate mapping of precipitation will be possible on a wide scale, enabling extensive improvements in forecasting river plain flooding and flash floods.

  The NEXRAD Joint Systems Program Office FY 1989 activities included:

    - Installed and checked out the UNISYS preproduction unit at Norman, Oklahoma.
    - Conducted IOT&E(2) on the preproduction unit.
    - Continued land acquisition, engineering design and site preparation for NEXRAD radar/communications sites and user facilities.

  The NEXRAD Joint Systems Program Office FY 1990 plans are:

    - Exercised contract option for full-scale production.
    - Deliver limited production NEXRAD radar equipment to Oklahoma City, Oklahoma; Melbourne, Florida; Sterling, Virginia; and Kansas City, Missouri Training Center.
    - Train cadre of government instructors for operations and maintenance training of NWS field personnel.
    - Contract for depot spares.
    - Continue engineering design and land acquisition for NEXRAD sites.

The following table shows funding projections through FY 1995.

(Dollar amounts in thousands)

NEXRAD:	FY 1988 & Prior	FY 1989	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995
Budget Authority....	$128,324	$41,400	$71,400	$114,343	$107,420	$70,620	$36,997	$21,359
FTE..................	N/A	28	28	28	28	28	28	28

o ASOS (Automated Surface Observing Systems) will provide reliable, 24-hour per day, continuous surface weather observations. Implementation of ASOS into NWS field operations will reduce time-consuming manual observations, provide continuous weather watch, and yield improved staff productivity. NOAA is developing and competitively acquiring ASOS units in cooperation with DOT/FAA and DOD. NWS has the responsibility for acquiring, implementing, and maintaining planned NWS, FAA, and DOD ASOS units.

The ASOS Program Office FY 1989 activities included:

- Released Request for Proposal (RFP) for single contractor production and implementation activities.
- Completed interagency visibility sensor testing.
- Initiated preproduction system acceptance tests.

The ASOS Program Office FY 1990 plans are:

- Complete preproduction system acceptance tests.
- Complete preproduction field test and evaluation reports.
- Complete evaluation of production proposals.
- Award ASOS production contract.
- Begin ASOS limited production.
- Complete total of 572 site surveys; 163 NWS, 408 FAA, 1 Navy.

The following table shows funding projections through FY 1995.

(Dollar amounts in thousands)

ASOS	FY 1988 & Prior	FY 1989	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995
Budget Authority....	$27,750	$6,250	$8,725	$14,058	$15,233	$15,993	$ 4,883	$3,883
FTE..................	N/A	10	10	10	10	10	10	10

o **Advanced Weather Interactive Processing System (AWIPS)/NOAAPORT:** AWIPS will integrate all meteorological and hydrological data at the NWS field offices and provide, to the local field forecaster, the functional capability that has shown to significantly improve operational forecasts of the National Severe Storms Forecast Center and experimental warnings under NOAA's Program for Regional Observing and Forecasting Services (PROFS). In addition to supporting the remapping of GOES data, NOAAPORT will provide the communications capability needed to afford internal and external users with access to much of NOAA's real-time environmental data.

The AWIPS Program Office FY 1989 activities included:

- Awarded two AWIPS Definition Phase contracts.

- Initiated Phase II of NWS Modernization/AWIPS risk reduction activities at WSFO Denver.
- Conducted functional capabilities and acquisition strategies analyses with Definition Phase contractors.

The AWIPS Program Office FY 1990 plans are:

- Release RFP for Development, Deployment, and Operations Phase activ'ties.
- Conduct functional bench mark demonstrations on the proposed NARD prototype configuration.
- Conduct risk reduction activities, including central feed of NMC and NESDIS products, at Norman, Oklahoma.

The following table shows the AWIPS/NOAAPORT funding projections through FY 1995.

(Dollar amounts in thousands)

AWIPS	FY 1988 & Prior	FY 1989	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995
Budget Authority....	$32,908	$13,500	$13,560	$34,803	$31,186	$31,186	$31,186	$31,186
FTE.................	0	0	0	0	0	0	0	0
NOAAPORT								
Budget Authority....	$ 3,484	$ 2,000	$ 0	$ 7,000	$ 2,000	$ 2,000	$ 2,000	$ 2,000
FTE.................	0	0	0	0	0	0	0	0
TOTAL	$36,392	$15,500	$13,500	$41,803	$33,186	$33,186	$33,186	$33,186

- The NOAA Central Computer upgrade, begun in FY 1990, will lead to more accurate and more specific forecasts of major storms including hurricanes, severe thunderstorms, floods and winter storms, and more accurate general weather forecasts in the medium (3 to 10 day) and extended (30 day) range. Continued improvements in larger scale, centrally prepared weather guidance products for day 2 and beyond are essential to successful implementation of mesoscale forecasting in NWS field operations where field forecasters will concentrate on the mesoscale processes for forecasting less than 36 hours.

The National Meteorological Center's (NMC) Class VII acquisition plans are:

- Contract awarded in the first quarter of FY 1990.
- Installation and acceptance during the second quarter of FY 1990.

The following table shows the funding projections for a class VII computer system through FY 1995.

(Dollar amounts in thousands)

Central Computer Facility:	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995
Budget Authority	$7,800	$7,263	$7,263	$7,263	$7,263	$7,263
FTE	0	0	0	0	0	0

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Public warning and forecast systems	Pos./BA	39	$100,941	39	$177,467	0	+$76,526
	FTE/Obl.	119		119		0	

A summary of the requested change for each major system is as follows:

System	1991 Base	1991 Estimate	Difference
NEXRAD	$71,059	$114,343	+$43,284
ASOS	8,683	14,058	+5,375
AWIPS	13,436	34,803	+21,367
NOAA-PORT	0	7,000	+7,000
Central Computer Facility	7,763	7,263	-500

Next Generation Weather Radar (+$43,284,000) - NOAA requests an increase of $43,284,000 (object class 31.0 and 32.0) to fund the NWS share of the tri-agency NEXRAD program. Total contract cost estimates have not changed since the FY 1990 budget submission. An increase in FY 1991 is necessary to continue funding the NWS share of the production phase contract, to initiate logistics support activities to achieve scheduled milestones at least cost to the Government, and to continue NEXRAD radar/communication site and user facility construction. The Government exercised the firm fixed price contract option for full-scale production units in January 1990. Funding at the requested level is imperative to prevent schedule slippage in deployment of NWS NEXRAD systems and to replace existing obsolete radars to avoid escalation of disruptions in public warning services.

Automation of Surface Observations Program (+$5,375,000) - NOAA requests an increase of $5,375,000 (object class 31.0) for the Automation of Surface Observations Program. An FY 1991 increase is necessary to continue funding the NWS share of the ASOS full-scale production phase contract, to fund operation and maintenance of installed units and to train operators. The production contract is expected to be signed in early summer 1990.

Advanced Weather Interactive Processing System/NOAAPORT (+$28,367,000) - NOAA requests an increase of $28,367,000 (object class 25.0) for the AWIPS/NOAAPORT program in FY 1991. The requested level will allow completion of the Definition Phase efforts, initiation of the Development Phase (software and preproduction equipment required for the NARD sites), and provision for initial remapping of GOES data at NESDIS.

Efforts will also continue to derive critical information needed to define, analyze, and assess technical trade-offs and impact on operations and service from activities conducted in collaboration with OAR and NESDIS at Boulder/Denver, CO; Norman, OK; Kansas City, MO; and NOAA central facilities in the Washington D. C., area. These activities are the planned extension of in-house development and risk reduction activities conducted in FY 1988, FY 1989, and FY 1990. They will provide essential input to Government decisions on NWS modernization efforts and in the determination of the final characteristics of the AWIPS production units that will be deployed nationwide following the Development Phase.

NOAA Central Computer Facility (-$500,000) - NOAA requests a decrease of $500,000 (object class 25.0) for maintenance costs associated with the Class VII computer to be installed in the second quarter of FY 1990.

Justification of Program and Performance

Activity: National Environmental Satellite, Data, and Information Service
Subactivity: Satellite Observing Systems

Goals and Objectives

Goals: To maintain a system of polar-orbiting satellites that obtain global environmental data; to maintain a system of geostationary satellites that provide near-continuous observations of the earth's western hemisphere; to monitor the earth's surface and space environment conditions; to introduce improved atmospheric and oceanic observations and data dissemination capabilities; to develop and launch one additional Landsat satellite (Landsat 6); and to develop and provide new and improved applications and products for a wide range of Federal agencies, state and local governments, and private users.

Objectives: Continue procurement of spacecraft, instruments, launch services, and ground equipment necessary to maintain uninterrupted operational polar-orbiting and geostationary satellite systems for the following purposes: (1) obtain quantitative environmental data such as temperature, moisture, wind, radiation flux, and solar energetic particle flux, used in numerical analysis and prediction programs; (2) locate and collect data from remote, fixed and moving platforms, such as buoys, balloons, and ships; (3) provide continuous imagery of the earth and its environment on a regular basis, including direct read-out and environmental data broadcasts to ground stations; (4) provide search and rescue data to locate aircraft and ships in distress; (5) operate and maintain the NOAA satellites and acquire data from them; (6) process and analyze the data from NOAA, DOD, and other operational and research Earth-observing satellites; (7) supply data, interpretations, and consultation services to users, and determine requirements for future satellite systems; (8) conduct research to improve satellite systems capability for obtaining environmental data; and (9) demonstrate better ways to use and distribute data from NOAA, NASA, and other satellites, aircraft, and laboratory investigations, and apply these improvements to satellite data products for operational use.

Base Program

NOAA procures, operates, and maintains the spacecraft and ground system components of two environmental satellite systems. The polar-orbiting satellite system obtains global environmental data; the geostationary satellite system provides near-continuous observations of the Earth's western hemisphere to support provision of weather warnings and forecasts and other applications. Qualitative data from these systems include visible and infrared images of cloud and weather features; quantitative data include measurements of the vertical temperature of the atmosphere, sea surface temperatures, cloud motion, winds, and solar environmental data. The basic NESDIS mission is to acquire, process, and analyze data, and to prepare products for distribution from these two satellite systems and from other operational research Earth-observing satellites. NOAA also conducts research and development including advanced system tradeoff and cost studies, efforts to improve methods of obtaining satellite data, and projects to develop new techniques for applying these data to warnings and predictions and to other atmospheric, oceanic, and land monitoring applications.

These satellites also collect data from buoys, ships, aircraft, and remote platforms and relay them to a central processing and distribution site. The polar satellites also provide a relay function for global emergency signals from aircraft and ships in distress under an International Space System for Search of Vessels in Distress/Search and Rescue Satellite Aided Tracking (COSPAS/SARSAT) program. A key element in the success of this program, in addition to the space hardware segment, is the ground processing segment for receiving, processing, and distributing alert notification and location data. Over 300,000 Emergency Locator Transmitters (ELT's) used by aircraft, and approximately 6,000 beacons in the U.S. recreational and fishing fleet are served by this program. Procurement of satellites is a cooperative venture in which NOAA and NASA have key roles. NOAA as the operating agency represents the user and defines the basic requirements for the system. NASA as the agency with multi-disciplinary engineering expertise develops detailed specifications and procures and launches the spacecraft. NASA is reimbursed for these services by NOAA.

Well in advance of the procurement NOAA initiates the preparation of budget estimates. The budget estimates are formulated to reflect the total cost of the satellite series, including contractor costs for satellite and instrument development and fabrication, NASA support, launch vehicles and launching services, program management, and any other associated costs. The phasing of the total cost is developed so as to project the yearly funding necessary to continue the program at a level required to maintain the delivery and launch schedule. Specification preparation, requests for proposals, and negotiations are completed based upon planning for contract award at the time when funding first becomes available. The delivery of the first satellite in any new procurement is expected approximately 5 years from the date of contract award. NOAA procures, operates, and maintains ground systems which command and control the satellites (with the exception of LANDSAT) and acquire data from them. The primary components of these ground systems are The SOCC (Satellite Operations Control Center) at Suitland, Maryland, and two CDAs (Control and Data Acquisition stations) at Wallops Island, Virginia, and Fairbanks, Alaska. In addition to day-to-day satellite control and monitoring, NOAA ground systems operations coordinate activities for anomaly assessment and quality control, provide launch and checkout services for new spacecraft, and provide tracking data and other acquisition information to outside users of the spacecraft data.

After acquiring, processing, and analyzing satellite data, NOAA prepares products for distribution. The primary uses for NESDIS products are the forecasts and warnings provided by the National Weather Service, but the satellite data is also used in many other environmental information contexts. These include analyzing climate change; detecting volcanic eruptions and wilderness fires and tracking associated dust clouds; and monitoring the health of vegetation, the growth of deserts, and deforestation. NOAA conducts research and development to improve data quality and to identify other ways in which the data can be used to protect life and property and strengthen the Nation's economy.

NOAA is the lead U.S. agency for the International COSPAS/SARSAT program, and operates the U.S. SARSAT Mission Control Center. In this program, transponders flown on NOAA and Soviet satellites receive signals from ships and aircraft in distress and identify their location.

POLAR ORBITING SYSTEM -- This program involves the procurement and launch of the polar-orbiting operational environmental satellites. NOAA 10, launched in September, 1986 and NOAA 11, launched in September, 1988 are the current operational satellites. Launches of subsequent spacecraft will be determined after careful analysis of in-orbit capabilities and life expectancy estimates. For planning purposes, the nominal operational life of a polar-orbiting satellite is 31 months on average; planning schedules must factor in the potential for launch failures and early-orbit spacecraft failures. All satellites through NOAA J will be launched on Atlas vehicles obtained from the Air Force, through NASA on a reimbursable basis. The NOAA KLM series of satellites is planned to be launched on Titan II launch vehicles, also procured by the Air Force through NASA.

The NOAA KLM series of polar-orbiting satellites will be three-axis stabilized satellites carrying the following instruments:

- TOVS - Tiros Operational Vertical Sounder; collects atmospheric temperature and water vapor profiles.

- AVHRR - Advanced Very High Resolution Radiometer; collects medium resolution (4 km) cloud images which are 1 continuously broadcast through the Automatic Picture Transmission (APT) system. It also provides high resolution (1 km) data with direct readout through the High Resolution Picture Transmission (HRPT) system.

- DCPLS - Data Collection and Platform Location System, called ARGOS, furnished by France.

- SEM - Space Environment Monitor; measures solar activity.

- SBUV - Solar Backscatter Ultra Violet ozone monitoring instrument; collects global ozone measurements.

- SAR - Search and Rescue Instrument; Canada provides the spacecraft beacon.

The contract for the NOAA KLM spacecraft was awarded in July, 1988. These spacecraft are being built to functional specifications similar to NOAA J, but with an improved sounding unit, the Advanced Microwave Sounding Unit (AMSU). The sounder on the satellites through NOAA J is comprised of three instruments: the High-Resolution Infrared Radiometric Sounder (HIRS); the Stratospheric Sounding Unit (SSU), which is provided by the United Kingdom; and the Microwave Sounding Unit (MSU). The combination of these three instruments is called the TIROS Operational Vertical Sounder (TOVS). The AMSU will replace both the SSU and the MSU on the TOVS and it will have a greatly improved microwave capability. A portion of the AMSU will be furnished by the United Kingdom.

Funds requested for FY 1991 will be used to cover the cost for continued fabrication of the NOAA KLM satellites and instruments and the integration, test, and launch preparation of NOAA I and J. The procurement process for instruments for a next generation polar-orbiting environmental satellite system following NOAA KLM will begin in FY 1991. Funding also is required to reimburse the Air Force for launch services related to the Atlas launches of NOAA I and J and for NOAA K-N Titan launch vehicle costs.

This program also includes the ground-based equipment necessary to command and control the polar-orbiting spacecraft and process the data acquired for the user community. New ground system components must be in place to support NOAA K.

The principal products derived from polar-orbiting satellite data are: (1) vertical temperature and moisture soundings, (2) sea surface temperature measurements, (3) global cloud cover images and mosaics, (4) crop assessment parameters for agriculture monitoring, (5) Search and Rescue, and (6) total ozone measurements.

GEOSTATIONARY SYSTEM - This program involves the procurement and launch of the geostationary operational environmental satellites (GOES). GOES 7 (GOES-East), launched in February, 1987, is the current operational satellite. Subsequent GOES satellites are to be launched on approximately a five-year replacement basis, because the design-life of the GOES spacecraft is five years. GOES I is planned to be launched in 1991 to replace GOES 6 which ceased operations in 1989. GOES J is planned to be launched in 1992, GOES K in 1996, GOES L in 1997, and GOES M in the year 2001.

GOES I-M will be launched on Atlas Centaur expendable launch vehicles under a commercial launch services contract. The launch services contract for the GOES I-M series was awarded in May 1988. The launch services contract is being renegotiated to reflect the five-year planned launch schedule.

The contract for the GOES I-K spacecraft was awarded in October 1985; an option for two additional spacecraft (GOES L and GOES M) was exercised in December 1985. GOES I-M is a new series of geostationary spacecraft representing a major development effort. This is the first time that NOAA, rather than NASA, has retained budget responsibility for such development. Whereas the previous spacecraft were spin-stabilized, GOES I-M will be three-axis stabilized. Instruments on GOES I-M will be able to view the Earth continuously, rather than "eyeing" a scene once with each revolution. In addition, GOES I-M will be able to provide soundings and images simultaneously; the current GOES can only provide either soundings or images at any given time.

The GOES I-M series will carry the following instruments:

- GOES sounder - provides measurements of atmospheric temperature and moisture.
- GOES imager - provides infrared and visible images of the full or specific segments of the Earth disc.
- SEM - Space Environment Monitor; provides measurements of solar radiation data.
- DCS - Data Collection System; collects and relays environmental data measured by a variety of remotely located observing platforms.

- Solar X-Ray Imager - DOD-funded instrument to be flown on GOES L.

Funds requested for FY 1991 will be used to continue development, test, and fabrication of the GOES I-M spacecraft and instruments, and for integration, test, and launch preparation of GOES I and J. The GOES I spacecraft has completed spacecraft level testing and the prototype imager has been delivered and is undergoing integration and performance tests. The sounder requires additional development effort to meet acceptable performance and reliability requirements. Funds are also requested for Atlas Centaur commercial launch services.

This program also includes the ground-based equipment needed to command and control the GOES spacecraft and process the data required for the user community. New ground system components will be required for GOES I-M as this series has a more complex design and advanced observing capabilities compared with GOES 7. The three-axis stabilized design also places greater demands on spacecraft command and control. During the period that both GOES 7 and GOES I are providing operational service, NOAA must operate and maintain both the current ground system and the new ground system established for the GOES I-M series. After GOES 7 completes its operational lifetime, the older ground system will be deactivated and the new ground system will support the GOES system through the end of this century.

ENVIRONMENTAL OBSERVING SERVICES - Under this program, NOAA operates and maintains satellite ground facilities, ingests and preprocesses incoming satellite data, provides satellite-derived products to the users, and conducts research to improve the use of the satellite data. Specific functions include:

- Operation and maintenance of ground facilities to command and control operational satellites, acquire satellite data, and transmit satellite data to the central processing and analysis center. These functions are carried out by the Satellite Operations Control Center (SOCC) at Suitland, Maryland, and the Command and Data Acquisition (CDA) stations at Wallops Island, Virginia, and Fairbanks, Alaska.

- Ingestion and processing of all data from the polar and geostationary spacecraft, including vertical atmospheric measurements (soundings), low-level wind vectors, and sea surface temperatures for input to National Weather Service analyses and forecast models. Image production for distribution to users and a digital satellite data archive.

- Provide products to assist in protection of life and property such as quantitative precipitation estimates for flash flood situations, hurricane classification, satellite monitoring and tracking of severe weather, and sea ice and ocean front analyses.

- Provide research to develop new and improved methods of obtaining satellite data and to develop techniques for applying these data to atmospheric, oceanic, and land monitoring, warning, and prediction.

The principal products derived from geostationary satellites are: (1) full disc and sectorized cloud-cover images, (2) derived wind speed and direction, (3) assessments of hurricane motion and intensity, (4) severe thunderstorm and tornado detection and monitoring, and (5) warnings of potential flash flooding. Snow cover and sea and lake ice maps, and products to support agriculture are produced from data derived from both environmental satellite systems. The geostationary satellites also provide measurements of vertical temperature and moisture.

The application products derived from both polar and geostationary satellites are delivered through a variety of formats: user-accessible data bases; photo facsimile images; satellite weather facsimile transmission (WEFAX); interactive computer access, and archives. Techniques also are developed for new and improved applications of satellite data. In the future, satellite data will also be transmitted over the NOAA-Port system to National Weather Service field offices and other users. Stratospheric sounding data derived from instruments developed and funded by the United Kingdom are relayed to the United Kingdom; Data Collection System (DCS) data, derived from the French-funded ARGOS systems on the spacecraft, are relayed to Project ARGOS in France as part of bilateral agreements. United States users, in turn, receive processed data from the French and British.

Analyses and interpretation of geostationary and polar-orbiting satellite data are prepared by the National Weather Service at forecast offices staffed with satellite meteorology experts. These offices receive high-resolution images on a 24 hour-per-day, 365 day-per-year basis from the GOES Central Data Distribution System. One station, San Francisco, receives the high-resolution polar satellite data directly from the spacecraft. All of these offices analyze and interpret the cloud and earth surface images and associated products for use in their regional forecasts. These images are used in preparing aviation forecasts, and short-term forecasts and warnings of hazardous events such as severe local storms and tornadoes, hurricane advisories, and gale warnings. The products also are used in preparing river and flood forecasts, snow melt and sea ice analyses, and marine forecasts and warnings, including services for shipping, coastal and ocean fisheries, and recreational boating. GOES imagery is distributed to television stations, universities, state governments, industry, and other Federal agencies through the GOES-TAP system which allows the user to receive any of the standard image sectors available to a particular forecast office for a fee. In the future, the NOAA-Port system will be the primary means of delivering GOES data and products.

NOAA conducts research to improve our understanding of the physical processes in the atmosphere, on land, and in the oceans which affect weather and climate. Satellites are integral to this work because of their unique capability to provide the vast amounts of data needed for forecast modeling. The satellite's vantage point in space provides data coverage in both time and areal extent not achievable by other practical observational techniques or systems. Universities and industrial groups participate in developmental activities through cooperative research and information exchange arrangements. Also, close coordination is maintained with related NASA and DOD research and development programs and with the environmental satellite programs of other nations.

LANDSAT - This program continues the development of the next satellite, Landsat 6, scheduled for launch in mid-1991. This satellite will be operated by a private sector corporation, replacing the current satellites, Landsats 4 and 5. Landsat applications include agricultural crop assessment, pollution appraisal, population growth monitoring, and geological analysis related to petroleum and mineral extraction. Landsats 4 and 5 carry a Thematic Mapper and Multi-Spectral Scanner. Landsat 6 will carry an enhanced Thematic Mapper. The Landsat 6 satellite will be launched on a Titan II launch vehicle by the Air Force under a cost reimbursement agreement.

Summary of Workload and Performance Data

Polar orbiting systems and geostationary systems

Performance is measured by adherence to following launch schedules:

PLANNING LAUNCH SCHEDULE - POLAR SYSTEM

NOAA-D	CY 1990
NOAA-I	CY 1991
NOAA-J	CY 1992
NOAA-K	CY 1993
NOAA-L	CY 1995
NOAA-M	CY 1996

PLANNING LAUNCH SCHEDULE - GEOSTATIONARY SYSTEM*

GOES-I	CY 1991
GOES-J	CY 1992
GOES-K	CY 1996
GOES-L	CY 1997
GOES-M	CY 2001

* The current Commercial Launch Services contract contains earlier launch dates. It is being renegotiated to reflect these new launch dates corresponding to the plan to schedule replacement launches to replace launches (GOES East and GOES West) every five years.

Environmental observing services - During periods of normal operations production is considered successful if we achieve 90 percent of each scheduled event. Effectiveness of satellite operations is measured by the following percentages of accomplishment:

	FISCAL YEAR (%)			
Polar-orbiting satellites:	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Satellite soundings	93	92	92	92
Sea surface temperatures	98	92	92	92
Mapped images	98	95	95	95
Facsimile images	98	95	95	95
Data transmissions	98	95	95	95
Geostationary satellites:				
Computer-derived winds	98	95	95	95
Weatherfacsimile transmissions	98	95	95	95
Facsimile	98	95	95	95

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Polar-Orbiting System....................................	Pos./BA	0	$15,112	0	$64,584	0	+$49,472
	FTE/Obl.	0		0			

This change includes two items:

Polar Spacecraft and Launching (+$49,472,000) - The FY 1991 NOAA budget reflects an increase of $49,472,000 (object class 25.0) over the amount included in the FY 1990 Appropriation. The FY 1991 request includes funds to meet the annual costs to continue fabrication, integration, and test of NOAA I and J spacecraft and fabrication of NOAA KLM spacecraft and instruments. The FY 1991 spacecraft increase reflects normal year-to-year fluctuations in the accrued cost of multi-year spacecraft procurements. Funds are also requested to meet the annual costs of reimbursing the Air Force for Atlas and Titan launch services. Year-to year variances in launch costs reflect USAF payment schedules based on launch-related activities planned for each year. The total estimate for NOAA I and J launches is increased to include the most recent USAF estimates of the NOAA cost-share for Atlas launch facilities. The total estimate for NOAA KLM launch costs is reduced to reflect updated USAF Titan launch cost estimates. Funds are also requested in FY 1991 to begin procurement of common interface instruments for the polar-orbiting environmental satellite system that will follow NOAA KLM.

The following table identifies future increments for the proposed program:

(Dollars in thousands)

	FY 1988 and Prior	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995	To Complete	Total
NOAA A-G									
Spacecraft	$137,674								$137,674
Launching	79,871								79,871
Subtotal	217,545								217,545
NOAA H-J									
Spacecraft	181,992	5,381	6,400	4,100	2,800				200,673
Launching	35,391	2,552	20,943	37,947					96,833
Subtotal	217,383	7,933	27,343	42,047	2,800				297,506
NOAA K-M									
Spacecraft	159,409	1,917	22,956	57,988	46,112	41,493	43,306	11,849	385,030
Launching	12,875	1,000	10,785	24,000	30,000	16,700	4,600	8,831	108,791
Subtotal	172,284	2,917	33,741	81,988	76,112	58,193	47,906	20,680	493,821
Follow-on System	0	0	3,500	30,000	133,650	164,025	0	395,250	726,425
Ground Systems	41,182	4,334	0	2,000	2,000	5,000	5,000	13,000	72,516
Total Requirements	$648,394	$15,184	$64,584	$156,035	$214,562	$227,218	$52,906	$428,930	$1,807,813

Changes for FY 1991

(Direct Obligations in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec.(-)	
Geostationary System	Pos./BA	0	$135,348	0	$109,146	0	-26,202
	FTE/Obl.	0		0		0	

This change includes two items:

Geostationary Spacecraft and Launching (-$26,202,000) - A decrease of $26,202,000 (object class 25.0) is requested. This is comprised of a decrease for spacecraft procurement and an increase will be for launch services. Funding requirements for both spacecraft and launch services are subject to change due to a rephasing of the program by the spacecraft contractor, which is currently underway. The spacecraft contract has experienced significant cost growth due to technical problems experienced in the development of operational sensors; this is attribuiable to the developmental nature of this new spacecraft system. Some specifications have been relaxed through a descoping exercise conducted last year to limit cost growth. The descoped system will still meet the needs of the National Weather Service through the 1990's. To further limit cost growth, the contract is being renegotiated from a cost-reimbursable to a fixed-price type contract. The GOES I-M launch services contract is also being renegotiated to produce total GOES system savings by limiting replacement launches to five-year centers, commensurate with the five-year design life of the GOES I-M spacecraft. The GOES I-M spacecraft will be launched on Atlas Centaur expendable launch vehicles.

The following table identifies future increments for the proposed program (dollar amounts in thousands):

	FY 1989 and Prior	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995	To Complete	Total
GOES I-M									
Spacecraft	$463,007	$97,642	$66,126	$46,842	$17,400	$10,675	$21,885	$25,020	$748,597
Launching	73,683	35,255	41,345	23,100	23,100	54,300	31,400	222,900	505,083
Subtotal	536,690	132,897	107,471	69,942	40,500	64,975	53,285	247,920	1,253,680
Ground Systems	49,164	3,100	1,675	1,400	1,400	0	0	0	56,739
Total Requirements	$585,854	$135,997	$109,146	$71,342	$41,900	$64,975	$53,285	$247,920	$1,310,419

* Estimates subject to change following contract renegotiation.

Changes for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc. (+) or Dec. (-)	
Landsat Commercialization	Pos./BA	0	$34,734	0	$36,334	0	+1,600
	FTE/Obl.	0		0		0	

Landsat Commercialization (+$1,600,000) -- An increase of $1,600,000 (object class 25.0) is requested for FY 1991. The funds are required to reimburse the Air Force for the Titan II launch of Landsat 6, planned for mid-1991. The Landsat 6 satellite and ground system will be operated by the private sector, contractor, EOSAT, as called for by the Landsat Commercialization program that was initiated in FY 1985. Landsat 6 uses an Advanced TIROS-N design and will carry an Enhanced Thematic Mapper.

The Administration is considering options for continuing Landsat-type data after Landsat-6. No funds are required in 1991 for additional satellites consistent with the expected lifetime of Landsat-6. The National Space Council will conduct a review of the management and configuration of a follow-on system. The Administration will report to Congress on the outcome of their study expeditiously.

The following table identifies funding increments for the Landsat 6 program:

	FY 86 & Prior	FY 87	FY 88	FY 89	FY 90	FY 91
Spacecraft	$90,000	$62,500	$10,000	$20,400	$34,900	0
Launching	0	0	0	0	0	$36,334
Total	$90,000	$62,500	$10,000	$20,400	$34,900	$36,334

		1991 Base		1991 Estimate		Inc. (+) or Dec.(-)	
Environmental Observing Services	Pos./BA	478	$57,692	478	$48,192	0	-$9,500
	FTE/Obl.	459		459		0	

Environmental Observing Services (-$9,500,000) -- A decrease of $9,500,000 is requested for Landsat Operations. No resources are requested for Landsat 4 and 5 operations in FY 1991 because the satellites are expected to cease operating in 1990. However, the Administration is committed to operating the Landsat 4 and 5 satellites as long as they function. No funds are proposed for operation of Landsat 6 because these costs will be covered by the contractor, EOSAT. Landsat 4 is currently used only to collect Multi-Spectral Scanner (MSS) data, due to a transmitter and power supply failure in FY 1983. Funds for the continued operation of Landsats 4 and 5 for the last six months of 1990 will be provided to NOAA from the major user agencies (Departments of Defense, Agriculture, and Interior).

Justification of Program and Performance

Activity: National Environmental Satellite, Data, and Information Services
Subactivity: Environmental Data Management System

Goals and Objectives

Goals: To provide worldwide environmental data and information products and services in the atmospheric, marine, solid earth, and solar-terrestrial sciences to meet the needs of users in commerce, industry, agriculture, science and engineering, the general public, and Federal, state and local agencies. These products and services are used in decisions critical to the following: national economy; national defense; the productivity of American industry; energy development and distribution; world food supplies; public health; safety and welfare and, the development of natural resources.

Objectives: To increase productivity and improve support to the national economy, food and energy industries, scientific research, and the military services by improving the quality and accessibility of national environmental data and information files; and to improve environmental data products and services.

Base Program

The Environmental Data Management System subactivity comprises the national environmental data base and NOAA's three data centers: the National Climatic Data Center (NCDC) in Asheville, N.C.; the National Oceanographic Data Center (NODC) in Washington, D.C.; and, the National Geophysical Data Center (NGDC) in Boulder, Colorado. This subactivity also includes the NOAA library system. The library system, managed by NODC, includes a central library in Rockville, Maryland and branches in Seattle, Washington and Miami, Florida.

NOAA collects global environmental data about the oceans, earth, atmosphere, and the sun for use in NOAA activities to investigate, describe, and predict environmental conditions. Other domestic and foreign agencies, organizations, and individuals also collect data for their own environmental activities. After the data have been used for short-term purposes, selected data from these sources are obtained by NOAA, processed, and archived in the national environmental data base at the NOAA data centers. The data are used in numerous applications in industry, agriculture, business, law, science, engineering, and academic research, as well as by Federal, state, and local government agencies and by the general public. Applications include assessment of the impact of environmental fluctuations on industrial productivity and the national economy, national defense, energy development and usage, global food supplies, natural resources, natural hazards, and human health. Maintaining a national environmental data base ensures that the large investment made to collect global data continues to pay off by providing information for decision-making in climate sensitive industries, policy planning, education, and science.

CLIMATE DATA SERVICES: The National Climatic Data Center (NCDC) is located in Asheville, North Carolina, with a Satellite Data Services Division (SDSD) in Camp Springs, Maryland. NCDC was established as the official weather records center by authority delegated by the National Archives and Records Service. The NCDC provides full data management functions, as it annually receives, processes, and archives over 30 million conventional meteorological observations. SDSD archives approximately 2.5 thousand gigabytes of digital data and 60 thousand photographic images a year. These observations include surface, marine, upper air, radar, and solar radiation data, obtained from the National Weather Service, the Federal Aviation Administration, NOAA satellites, the Department of Defense, and other national and international sources. These data are maintained in a variety of media including digital, analog, microform, photographic imagery, and manuscript forms.

These data, some collected continually for over 100 years, give clues to climate variability and trends. NCDC is working with the World Meteorological Organization, the World Data Center System, and with individual countries in order to gain access to climatic data from around the world. Data are flowing into the Center in greater volumes as concern for climate and global change increases.

NCDC provides data and information products to a large and diverse user community, including climate researchers, engineers, agribusiness, planners, attorneys, government agencies, and the general public. For the research community, NCDC provides a variety of definitive ground-truth data sets. These baseline data sets establish the long-term climate perspective needed to verify Global Climate Models (GCM's) and other research studies. To meet the needs of a broad range of users, NCDC publishes several general monthly publications. Each year more than one million copies are distributed to paying subscribers. NCDC also provides data and information designed to meet specific needs requested by its users.

In addition to responding to user requests (answering an estimated 80 thousand user requests during 1989), NCDC prepares climate information summaries to improve public health and safety, improve productivity, and to generally improve the U.S. competitive edge through informed decision-making. Economic sectors benefiting from NCDC's data include energy development, energy conservation, power production, food production, human health, construction design and scheduling, and airport sitting. NCDC also performs climatic applications studies for other government agencies including NASA, EPA, DOD, and DOE.

User services at NCDC are supported by user fees. Prices are established and approved each year. In FY 1989, the approximately 35 thousand orders resulted in reimbursable income of approximately $4.5 million.

OCEAN DATA SERVICES: The National Oceanographic Data Center (NODC) in Washington, D.C. maintains the world's largest unclassified oceanographic data base. Holdings include records from more than 900,000 stations containing temperature, salinity, and in many cases nutrient chemistry data from the total water column (sea surface to ocean floor); 50.1 million surface and subsurface current measurements; 2 million bathythermograph records; and over 34.5 million records from automated ocean buoys. Data holdings also contain more than 4.7 million records from special projects such as the Outer Continental Shelf Environmental Assessment Program (OCSEAP).

Many of these data are obtained through international exchange agreements. NODC operates World Data Center A, Oceanography, under which data exchange agreements are in effect with more than forty countries engaged in marine research. NODC is also responsible for activities required by Section 8 of the National Ocean Pollution Planning Act involving tracking and referral for ongoing U.S. marine pollution research efforts.

NODC also oversees development, coordination, and operation of the NOAA library and information system. The NOAA library network, comprising more than one million volumes, is responsible for providing up-to date scientific, technical, and legislative information services to all NOAA scientists, administrators, and managers. The library uses a wide array of products and services to provide user support, including on-line access to hundreds of data bases, inter-library loan arrangements, and DC-ROM technology for citation searches.

Users of NODC services include industry, such as maritime shipping and offshore drilling companies; oceanographic and atmospheric scientists working on global change programs such as Tropical Ocean Global Atmosphere (TOGA), World Ocean Circulation Experiment (WOCE), and Global Ocean Flux Study (GOFS); commercial research organizations; Federal government agencies such as NASA, USGS, and NOAA working jointly on global change studies; state and local government agencies working with NOAA on coastal ocean research problems; and the general public.

Data are provided to users on either an exchange or a reimbursable basis. Under exchange agreements data may be provided at no cost in exchange for data of comparable value for inclusion in the national data base. In all other cases, data are provided to the users on a cost-recovery basis which reflects the actual cost to the government of providing the data.

GEOPHYSICAL DATA SERVICES: The National Geophysical Data Center (NGDC) in Boulder, Colorado, compiles, archives, and disseminates a wide variety of scientific data related to the earth's interior; the land surface and ocean floor; snow cover and ice extent; the upper atmosphere; the space environment; and solar activity. Disciplines covered include seismology, studies of the earth's gravity and magnetic fields, geochemistry, marine geology and geophysics, glaciology, paleoclimatology, upper atmospheric physics, and space and solar physics. Data are acquired through formal and informal arrangements with other government agencies, universities, and many foreign sources. NGDC operates the World Data Center a discipline center for Solar-Terrestrial Physics, Solid Earth Geophysics, Marine Geology and Geophysics, and Glaciology (Ice and Snow).

Data holdings consist of several hundred data bases of various sizes. Holdings include over 50 million ionograms; over 2.5 million magnetograms; marine geophysical data collected over 10 million miles of ship tracks by research vessels; aeromagnetic data collected over 12 million flight miles; over one million film mosaics from the Defense Meteorological Satellite Program, and many others. Selected data are routinely exchanged with World Data Centers B in the USSR, C in Europe and Japan, and D in China.

NGDC publishes the monthly periodical "Solar Geophysical Data", which provides detailed information on solar activity and its effect on earth to the worldwide research community. It publishes a wide variety of special reports, summaries, listings, and announcements of new data acquisitions. It provides various customized services to meet specific user needs in both the research community and the private sector.

Over ten thousand user requests are received each year. Users range from scientists and engineers in the research community and the private sector, to Federal, state, and local government agencies and the general public. Particular emphasis is placed on providing data to the earth science research community to support research in global change, resource exploration, and basic science.

Summary of Workload and Performance Data

(user requests serviced)

	1989 Actual	1990 Estimate	1991 Estimate
Climate data services	110,000	110,000	110,000

Justification of Program and Performance

Activity: Program Support
Subactivity: Administration and Services

Goals and Objectives

Goals: Administer programmatic and administrative policies of the President; establish NOAA operational policies; provide program support and direction; provide cost-effective administrative support services to NOAA and to DOC field components; conduct budget formulation, preparation, and execution; and, provide retirement benefits to NOAA commissioned officers and their families.

Objectives: To provide for overall NOAA management, including administration of the NOAA Corps, the administrative support centers, program support, automated systems, and retired pay for commissioned officers.

Base Program

In FY 1991 the following activities will be undertaken:

- Executive Direction: Administers programmatic and administrative policies of the President.
- Central Administrative Support: Includes NOAA's overall management of personnel, procurement, payments and administrative services, and NOAA's share of resources required to operate the five Administrative Support Centers (ASCs). ASCs provide the following services:
  - Personnel - all personnel functions, including classification and hiring, maintenance of personnel files, position reviews, labor management relations, employee counseling, and separation and retirement processing.
  - Procurement - including processing of all contracts, purchase orders, grants and cooperative agreements, and associated procurement functions.
  - Facilities and Logistics - including real property management and space utilization, oversight of personal property, transportation of goods, telecommunications, printing, etc.
  - Finance - processing of administrative payments through the NOAA and Department-wide administrative payments systems.
- Retired Pay Commissioned Officers: NOAA will continue to provide retirement pay for NOAA commissioned officers and payments to survivors of retired officers (approximately 144 retired officers and 53 survivors).

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Employees serviced	16,000	24,000*	16,000
Procurement and grant actions processed	30,000	30,000	30,000
Controlled correspondence received and processed	3,000	3,400	3,400

* Includes employees hired for development of the decennial census.

Increases for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Central Administrative Support	Pos./BA	842	$36,992	842	$37,192	0	+$200
	FTE/Obl.	928		928		0	

Major Projects Procurement Support (+$200,000) - An increase of $200,000 (object class 25.0, funds paid to Working Capital Fund) is requested to provide the procurement support necessary for major National Weather Service and National Environmental Satellite, Data, and Information Service projects. The funding will be used to supplement existing NOAA resources to operate a Department-wide office for major procurements. Existing procurement resources within NOAA are insufficient to properly coordinate, integrate, and control procurements on a major project level. Currently, staff with requisite expertise leave DOC for positions at higher grades at other agencies. The Departmental major procurement office will be competitive with similar operations in other agencies, notably, the Department of Defense, which provide a high grade structure for their contractual staff. The centralization of this major procurement support adds the benefits of providing central integrated procurements and of structuring workload within the context of major projects as requirements fluctuate during project life cycles.

Justification of Program and Performance

Activity: Program Support
Subactivity: Facilities

Goals and Objectives

Goals: Provide for repairs and maintenance on major research and operational facilities and provide for consolidation of selected NOAA Washington Metropolitan area facilities at the Metro Center Complex Buildings 1 and 2 in Silver Spring, MD.

Objectives: To provide for repairs and maintenance on major NOAA-owned research and operational facilities, and to consolidate area employees. The fund for repairs and maintenance addresses major health and safety issues for agency-wide operations and contributes to improved operational effectiveness. A routine maintenance fund allows timely correction of high priority deficiencies and rational planning to address future maintenance and repair problems. The Department of Commerce initiated the consolidation of NOAA's metropolitan area facilities at the Metro Center Complex in Silver Spring, MD., during 1988, in an effort to enhance program integration and management efficiency.

Base Program

Facilities Maintenance: The maintenance program was established in FY 1987 to initiate needed repairs on major research and operational facilities primarily for NOAA's fisheries laboratories and field stations.

Facilities Consolidation: The consolidation project includes the costs being incurred by NOAA to occupy two buildings at the Silver Spring Metro Center.

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Facilities Maintenance..	Pos./BA	0	$2,454	1	$3,204	1	+$750
	FTE/Obl.	0		1		1	

Maintenance of NOAA Facilities (1 position, +$2,750,000) - An increase of 1 position and $2,750,000 is requested to undertake a continuing NOAA-wide program to maintain and repair NOAA owned facilities. The following criteria have been established to rank the critical maintenance and repair needs across all NOAA programs:

- Abatement of imminent safety hazards;

- Alterations to facilities mandated by statute to abate long- and short-term pollution or other hazards;

- Repairs to facilities to enable NOAA missions to continue without interruptions.

NOAA operates approximately 228 installations nationwide and is responsible for the maintenance/repair/alteration of these facilities. A preliminary study conducted by the engineering and facilities management staffs of the Administrative Support Centers identified over 50 non-recurring maintenance projects requiring a total of $30 million to complete. At these installations, there are approximately 250 fuel tanks, many underground, which must be brought into compliance with EPA regulations. Some need to be replaced while many more require modifications including installation of leak detection systems. Projects also include the replacement of roofs, removal of asbestos, and replacement of deteriorated HVAC (heating, ventilating and air conditioning) systems. Normal facility maintenance does not include these major repairs and renovations. This increase would initiate an ongoing program to address these major projects as they are identified. The requested position would be filled by an engineer to oversee all phases of these projects including planning and construction.

Woods Hole Fisheries Lab - Bulkhead and Dock (-$2,000,000) - A decrease of $2,000,000 (object class 25.0) is requested to reflect the one-time funding in FY 1990 to undertake needed repairs at the Woods Hole facility.

Increases for FY 1991
(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec.(-)	
Facilities Consolidation	Pos./BA	0	$750	0	$3,473	0	+$2,723
	FTE/Obl.	0		0		0	

Facilities Consolidation (+$2,723,000) - An increase of $2,723,000 is requested to cover the costs associated with NOAA's consolidation of employees in Buildings 1 and 2 at the Metro Center Complex in Silver Spring, MD. NOAA began its consolidation of employees at the Metro Center Complex in FY 1988. NOAA will fully occupy Buildings 1 and 2 in FY 1990. The funds requested in FY 1991 will cover the costs for leasing and the purchase of furnishings for those buildings and will complete the repayment of the FY 1989 GSA loan ($750,000 in FY 1991). The consolidation will allow NOAA to achieve the GSA space utilization standard in modern, high quality Federal work space designed to satisfy NOAA's needs. This will be largely accomplished by the use of systems furniture.

Justification of Program and Performance

Activity: Program Support
Subactivity: Marine Services

Goals and Objectives

Goals: To provide safe vessels capable of obtaining data on the chemical, physical, biological, and geological characteristics and behavior of the oceans, the seafloor, the Great Lakes, and the ocean-atmosphere interface. This subactivity operates ocean and coastal vessels for use by NOAA, other Federal agencies and academic institutions. These organizations use the ships for programs which support marine navigation, marine resource development, business and economic activity, protection of life and property, and increased scientific knowledge concerning global climate changes, sea-level rise, coastal ocean matters and other evolving environmental phenomena.

Objectives: (1) Ensure the operational readiness and enhanced capabilities of the NOAA Fleet to support NOAA programs and their at-sea requirements; (2) provide centralized management and coordination, scheduling, repair, maintenance, port services, labor relations, operations procedures, and engineering for a fleet of 23 ships; (3) provide fuel, operating supplies, personnel, laboratory and deck equipment, sensor packages, communications, and navigation equipment to meet user requirements and schedules; (4) develop annual ship operating schedules based on program requirements; (5) develop annual and long-term plans for ship construction, rehabilitation, and maintenance to ensure optimum long-term use and readiness; (6) design, develop, and engineer ship systems to ensure cost-effective operation, and to meet user requirements and safety/legal regulations; and (7) train and qualify NOAA personnel for diving to ensure safe and effective diving operations.

Base Program

The NOAA Fleet is composed of 23 major vessels including the ALBATROSS IV and the JOHN N. COBB which are to be sold or disposed of in the near future. These NOAA vessels, ranging in length from 86 to 303 feet, conduct operations that support NOAA's programs in nautical charting, bathymetric mapping, fisheries research, resource assessment, marine environmental baseline assessment, coastal ocean circulation, and oceanographic and atmospheric research. Six ships are currently in an inactive status, including the ALBATROSS IV and the JOHN N. COBB. Operation of the remaining 17 vessels provides a total of 3,365 days-at-sea to support NOAA's highest priority programs. Changing program needs may necessitate changing sea day assignments and the mix of active and inactive vessels.

The programs supported include:

Subtropical Atlantic Climate Studies (STACS) - investigates the oceanic transport of heat, which is a key element in the natural global processes affecting long-term climate changes;

Fisheries Resource Assessment - investigates living marine resource stock size, condition, and distribution to support the fishery management functions of the Regional Fisheries Management Councils;

Porpoise Surveys - monitors the condition of porpoise stocks taken incidentally during U.S. purse seine tuna fishery operations;

Fisheries Oceanographic Cooperative Investigation (FOCI) - investigates the physical, chemical, and biological parameters affecting important fish stocks to determine how these parameters affect spawning, growth, survival, and recruitment;

Equatorial Pacific Ocean Climate Study (EPOCS) - investigates the role of the ocean in global climate through research on the dominant mechanisms that produce variations in sea surface temperature;

Tropical Oceans/Global Atmosphere (TOGA) - investigates the influence of large-scale atmospheric and oceanic changes in tropical ocean basins on short-term variability of global climate;

Radiatively Important Trace Species (RITS) - investigates certain atmospheric trace gases (such as chloroflourocarbons and nitrous oxides) to determine their chemistry and their potential to alter the global climate;

Sea Ice - research on sea ice processes to improve ice forecasting in Alaskan waters;

Outer Continental Shelf Environmental Assessment Program (OCSEAP) - investigates marine ecosystems to provide forecast capability for environmental damage caused by pollution;

Exclusive Economic Zone Mapping (EEZ) - maps and collects environmental data on the 200-mile Exclusive Economic Zone to enhance its development and protection;

Nautical Charting - hydrographic surveys in the Nation's coastal waters and ports to acquire data to update and maintain nautical charts and bathymetric maps;
National Status and Trends (NS&T) - investigates and monitors the long-term effects of human activities on the quality of the coastal ocean and estuarine environments;

World Ocean Circulation Experiment - studies the general circulation of the global ocean in order to predict ocean response and feedback to long-term changes in the atmosphere.

Ship characteristics and home port are tabulated below:

Ship	AGE	Length-Class	Mission(*)	Home Port	Status
OCEANOGRAPHER	26	303 ft. - I	1	Seattle, Washington	Inactive

* 1 = Oceanographic Research; 2 = Fisheries Research; 3 = Hydrographic Surveys; 4 = Bathymetric Mapping; 5 = Environmental Assessment

** To be sold or disposed

These ships are staffed by NOAA Corps Commissioned Officers, Wage Marine Employees, and General Schedule Technicians. They are deployed for multiprogram or specialized use depending on size, range, laboratory space, equipment, and accommodations. The Class I and II ships have the necessary size, endurance, and equipment to conduct surveys and investigations in the deep ocean outward from the continental shelf or in remote areas such as Alaska and Antarctica. The smaller Class III, IV, V, and VI are designed for continental shelf and near-shore operation.

The Atlantic Marine Center (AMC) in Norfolk, Virginia, provides regional fleet management, maintenance, stores, supplies, repair facilities, data processing facilities, operational support, and administrative support for the 11 East Coast ships. The Pacific Marine Center (PMC) in Seattle, Washington, provides similar services for the 12 West Coast ships.

Headquarters in Rockville, Maryland, provides centralized management; coordinates the development of annual ship operating schedules; updates long-range plans for new ship construction, inspection, rehabilitation, repair, maintenance, and operations; manages marine personnel labor relations (maritime unions); updates standard fleet procedures; carries out inspections; completes engineering for ship systems upgrade; procures equipment and systems; provides diver training and certification; monitors NOAA diving activities for adherence to regulations and diver safety and efficiency; and develops equipment and procedures for diving in waters containing hazardous materials.

The ships of the NOAA fleet and the onboard equipment represent a large capital investment. A continuing level of adequate maintenance is needed to protect this investment and ensure the readiness, reliability, and effectiveness of the fleet and thus NOAA's capability to meet commitments in carrying out marine programs.

Most of the total ship repair and maintenance cost is for shipyard contractual services; the balance is for procuring material. Necessary maintenance varies for each ship from year to year depending on mission and installed machinery. Major engine overhauls and drydockings are required approximately every 3 years, whereas other overhauls, maintenance, testing, or repair to vessel hull, machinery, electrical, electronic systems, and equipment occur more frequently.

Legislation will be proposed to permit the Nautical Charting program, as well as other ocean-related programs, to be financed from a Harbor Maintenance Trust Fund transfer to the proposed Marine Waterways Trust Fund. The Harbor Maintenance Trust Fund was established by P.L. 99-662, Title XIV, and derives its revenue from a user fee on commercial cargo. The proposed legislation will increase the fee to provide the necessary additional revenues to finance these programs. Under this proposal, the Nautical Charting program would be funded by a reimbursement to the OR&F account from the Marine Waterways Trust Fund. In FY 1991, $17,649,000 of the Marine Services base program attributable to nautical charting will be financed in this manner.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Number of active ships	21*	17	18
Number of inactive ships maintained	6*	6	5
Diver training classes conducted	16	16	16

* Includes four vessels (OCEANOGRAPHER, ALBATROSS IV, JOHN N. COBB, AND DAVIDSON) that were in both active/inactive status during FY 1989.

Changes for FY 1991

(Dollar amounts in thousands)

		1991 Base		1991 Estimate		Inc(+) or Dec.(-)	
Marine Services	Pos./BA	750	$60,120	772	$65,848	+22	+$5,728
	FTE/Obl.	804		823		+19	

A net increase of $5,728,000 and 22 positions is requested in this subactivity to begin a limited service life extension program for NOAA ships and reactivate one vessel.

Science/Survey Platform Improvements (+$4,000,000) - This increase (object class 25.0) provides the funding to begin a modernization and service life extension program for NOAA ships. The average age of the ships in the NOAA Fleet will be 26 years in FY 1991. A correctly scheduled service life extension (SLE) can extend a ship's operating life by 15 or more years and delay the much higher cost of ship replacement. As part of the SLE, newer ship technology can be introduced into the fleet which will potentially increase productivity through more efficient operations. SLE elements include overhaul or replacement of major ship systems, modernization of laboratory spaces and hull refurbishment or reconditioning.

Reactivate NOAA Ship DAVIDSON (+25 positions, +$2,010,000) - This increase will reactivate and operate the DAVIDSON for 120 days-at-sea in support of nautical charting and bathymetric mapping in FY 1991. Data collected by the DAVIDSON are required to update charts of coastal Alaska and other U.S. coastal areas. These charts are needed primarily to allow safe marine navigation. Under the proposal for later transmittal, this effort would be funded through transfers from the Harbor Maintenance Trust Fund.

Close Southeast Marine Support Facility (-3 positions, -$282,000) - A reduction of three positions and $282,000 is requested to close the Southeast Marine Support Facility in Miami, Florida, and home port the MALCOLM BALDRIDGE at the Atlantic Marine Center, Norfolk, Virginia, where ship services can be provided more efficiently and effectively. The Southeast Marine Support Facility is principally used by ships working with NOAA's Atlantic Oceanographic and Meteorological Laboratories (AOML) and the Southeast Fisheries Center. The MALCOLM BALDRIDGE can continue to import at Miami for staging of projects supporting AOML. The proposed decrease will affect personnel in Miami, Florida.

Variable Ship Costs - The FY 1991 estimate includes $7,494,600 of variable ship costs associated with other NOAA programs. The identification of these costs with the programs they support are shown for information purposes only. The variable ship costs and associated days-at-sea support the following line items:

Line Item	Amount	Days-at-Sea
Mapping and Charting........................	$3,029,000	1,225
Estuarine and Coastal Assessment............	349,500	244
Resource Information........................	2,390,100	1,576
Interannual and Seasonal Climate............	420,000	100
Long-Term Climate and Air Quality...........	315,000	75
Marine Prediction Research..................	561,000	165
Global Change...............................	430,000	100
Total.......................................	$7,494,600	3,485

Justification of Program and Performance

Activity: Program Support
Subactivity: Aircraft Services

Goals and Objectives

Goals: To operate a fleet of aircraft in support of NOAA's missions to: (1) monitor and predict weather and environmental conditions for the protection of life and property; (2) conduct research to advance oceanic and atmospheric technology to improve management of the environment and the rational use of our natural resources; (3) perform aerial surveys to support the nautical and aeronautical charting programs; (4) provide aerial surveys for flood forecasts; and, (5) supply airborne logistics support to various scientific programs.

Objectives: To support NOAA's research and development programs to improve weather, marine, and climate forecast services; to support the programs for nautical and aeronautical charting and river flood forecasting; to provide weather reconnaissance support to NOAA programs, Federal agencies, and international programs approved by the Under Secretary.

Base Program

The Office of Aircraft Operations (OAO) was established in October 1983, to consolidate the management of all NOAA aircraft. Fourteen aircraft located throughout the United States are managed by OAO at Miami International Airport in Florida. The OAO supports NOAA's research and development and service programs for improvement of weather, marine, and climate services; NOAA's nautical and aeronautical charting and river flood forecasting; NOAA's weather reconnaissance requirements; state, other Federal agencies, and approved international programs. The OAO is responsible for the following aircraft operations, services, and related functions:

- Atmospheric and Oceanographic Reconnaissance Operations and Research - NOAA's two fully instrumented WP-3D aircraft are the most sophisticated meteorological research platforms in the world. The aircraft research and navigation systems provide detailed spatial and temporal observations of a wide range of atmospheric and oceanic parameters in support of severe weather research, air/sea interaction, ocean dynamics and climate and global change programs. OAO develops and calibrates specialized instrumentations, integrates user-supplied instruments into the automated systems, and processes and analyzes data sets obtained from various field programs. This line item funds management of all NOAA aircraft operations.

- Hurricane Reconnaissance - OAO aircraft provide high density/accuracy hurricane data to the National Hurricane Center in near real-time. Storm data are transmitted via the aircraft satellite data link to upgrade forecasting models of hurricane track/intensity. Because of this capability, the OAO provides reconnaissance for hurricanes within 24 hours of landfall on the United States and its territories. Additionally, the OAO augments reconnaissance by DOD aircraft on developing tropical storms and provides hurricane reconnaissance over foreign airspace where military aircraft may be prohibited.

- Photogrammetric Operations - OAO conducts specialized aerial surveys and provides aerial photographs for the production of shoreline maps, shoreline revision data, nearshore bathymetric data for nautical charts, geodetic control establishment and storm evacuation routes; to position landmarks and aids to navigation; and to support other NOAA activities such as natural disaster damage assessment.

Gamma Snow Survey Program - OAO conducts an Airborne Snow Survey Program to obtain soil moisture and snow water equivalent data from a network of 350 flight lines. OAO provides the data to the National Weather Service (NWS) River Forecast Centers in Kansas City and Minneapolis, for use in issuing river and flood forecasts as part of the NWS Hydrologic Service Program.

Aeronautical Charting Operations - OAO conducts comprehensive aerial reviews of NOAA produced aeronautical charts depicting the National Airspace System. Specialized products required for safety of flight (Minimum Safe Altitude Warning data and precise obstruction location information) are gathered to ensure safe air travel. The aircraft services subactivity administers the operations of the aircraft supporting this program. The aircraft are base funded for the NOS aeronautical charting program and are partially reimbursable by FAA.

Air Quality Research Program - OAO supports airborne air quality research measurements for NOAA's Environmental Research Laboratories (ERL) including research to measure, understand, and model the physical, chemical and dynamic processes of the upper and lower atmosphere. This study includes the possible effects of the introduction of man-made pollutants. Operational funds are provided by the program.

Helicopter Support - OAO uses helicopters to support National Ocean Service, Office of Oceanic and Atmospheric Research, National Marines Fisheries Service programs such as the Outer Continental Shelf Environmental Assessment Program (OCSEAP). The following services are included: hydrographic, tide and oceanographic observations in the Arctic, tropical and remote locations; collection of biological, geological, and oceanographic specimens and samples; marine law and sanctuary enforcement; logistic transportation to otherwise inaccessible areas; and shipboard operations.

Summary of Workload Performance Measures

	1989 Actual	1990 Estimate	1991 Base Level	1991 Estimate
Flight hours flown (all aircraft)..................................	1,726	1,680	1,680	2,080

Increases for FY 1991

(Dollar amount in thousands)

		1991 Base		1991 Estimate		Inc.(+) or Dec. (-)	
Aircraft Operations and Maintenance..	Pos/BA	94	$7,440	94	$9,306	0	$1,866
	FTE/Obl	93		93		0	

Aircraft Operations and Maintenance Funding. (+$741,000) An increase of $741,000 is requested to meet increasing aircraft operations and maintenance requirements. Funds are required to provide for orderly replacement of aircraft avionics and navigation systems, recovery from aircraft catastrophic failures and maintenance of aviation proficiency to ensure safe and efficient performance of NOAA flight operations.

The average age of NOAA aircraft is 15 years. With increasing age, additional maintenance is required to maintain operational status and extend useful service lives of the aircraft. The initial capital investment in NOAA's 14 specially mission-configured aircraft was $30 million. Replacement of these aircraft would require $123 million. This request for operations and maintenance funding should be viewed as a cost effective approach to protecting the government's investment in these resources.

The typical useful life for and avionics and navigation instrumentation is 10 years. Most aircraft instrumentation is operating beyond its design life. Eventually these systems will experience a non-recoverable failure; when this occurs the aircraft may be decommissioned. It is essential that the systematic replacement of these systems be initiated in 1991 or the availability of aircraft support to scientific investigations or hurricane reconnaissance missions when required, cannot be guaranteed.

As NOAA's aircraft age, major repairs to replace propulsion and airframe systems are required with increasing frequency. Funding must be available to allow for the rapid recovery from a catastrophic systems failure. NOAA's aircraft support services are provided under restrictive time and weather constraints. Delays in accomplishing required repairs compromise programmatic effectiveness. A substantial increase in requirements for Pilot/Navigator training is anticipated due to the recent retirement and reassignment of a significant number of experienced aviators. It is imperative that funds be budgeted to train replacements, and to up-grade the qualifications of existing personnel. Pilots and navigators require extensive training to achieve the level of proficiency necessary to operate safely in the hazardous flight regimes common to NOAA's missions. It is critical that flight training be scheduled for FY 1991 to ensure that high-visibility projects like TOGA can be adequately supported in subsequent years with qualified pilots. Assigning a high priority to funding for both initial training and pilot proficiency is critical to the safe and efficient performance of NOAA flight operations.

Aircraft Navigation Subsystem Replacement (+$1,125,000) - An increase of $1,125,000 is requested to replace obsolete but critical components of the airborne navigation system used on NOAA's two WP-3D research aircraft. The remaining $550,000 of the total navigation subsystem requirement of $1,675,000 will be sought in FY 1992.

The WP-3D's are complex airborne laboratories and are used to support hurricane research and reconnaissance and other research initiatives in the area of global change, coastal ocean, acid rain and atmospheric and ocean research programs (including El Nino) for NOAA and the U.S. scientific community.

Navigation system equipment is critical to the success of all projects that the WP-3D aircraft support. The system provides essential position, altitude, and velocity information used both by the aircraft flight systems and the scientific data acquisition systems. The existing system was acquired in 1975 and it is becoming increasingly unreliable as it ages. The frequency of failure in the old equipment and the lead time to obtain spare or reworked components is increasing. Scientific programs costing millions of dollars for planning, ground preparation, personnel support and data analysis are jeopardized by the steady degradation of the reliability of the 14 year-old navigation systems.

NOAA plans to replace the current Omega navigation units with Global Positioning System navigation units. The position accuracy of the Omega units can vary by as much as 10 nautical miles during the course of a single flight. The GPS units can provide position accuracy to 100 meters. These improvements in position and velocity accuracy will improve hurricane center position reporting and wind speed/hurricane intensity measurements.

The requested funding will permit NOAA to purchase four GPS units; one per aircraft and one flight-ready spare per aircraft. In addition, five inertial reference platforms will be purchased; two per aircraft and one flight-ready spare.

Consulting and Related Services
(obligations in thousands of dollars)

	1989 Actual	1990 Estimate	1991 Estimate
Consulting services	$ 203	$ 870	$ 645
Management and professional services	28	57	47
Special studies and analyses	4,489	6,436	6,506
Management and support services for research and development	66	68	68
Total	$4,786	$7,431	$7,266

Consulting services are those services of a purely advisory nature relating to the governmental functions of agency administration and management and agency program management. These services are normally provided by persons or organizations generally considered to have knowledge and special abilities that are not usually available within the agency. Such services can be obtained through personnel appointments, procurement contracts, or advisory committees.

Management and professional services deal with management data collection, policy review or development, program development, review or evaluation, systems engineering and other management support services. Special studies and analyses deal with the highly specialized areas of agency activity, e.g. air quality, chemical, environmental, geophysical, oceanological, technological, etc. Management and support services for research and development are procurement actions that meet the description of management and professional services or special studies and analyses, but are funded under research and development.

NOAA proposes a decrease of $165,000 in consulting and related services expenditures for FY 1991 due to changes in program emphases. A brief description of expenditures for consulting and related services by activity follows:

National Ocean Service ($3,006,000) - Consulting services are to support the Tide and Sea Level program and for completion of the multipurpose land information systems guide book. Special studies which are the bulk of the expenditures in this area will be used to determine the dollar value of injuries to NOAA trust resources caused by discharges of oil or release of hazardous substances. Other studies are to support future Deep Seabed Mining Regulatory decisions and Marine and Estuarine legal actions.

National Marine Fisheries Service ($2,515,000) - During FY 1989 consulting services were used for ADP systems analysis, biological modeling of specific or groups of fisheries, and socioeconomic analysis of various fishery management plans. Studies and analyses were used in FY 1989 for better management of fisheries, marine mammals, endangered species and for Marine Recreational Fishery activities. Continuation of these services is planned in FY 1991.

National Weather Service ($547,000) - A five year contractual consulting services contract was let in FY 1990 with the National Research Council to analyze, study and review implementation plans to modernize and restructure the National Weather Service. Special studies are required for ADP communication systems analyses.

National Environmental Satellite, Data, and Information Services ($25,000) - Management and professional services were used in FY 1989 for program management support, and special studies and analyses for the Assessment and Information Services Center. In FY 1990 and 1991, these services will decrease substantially.

Oceanic and Atmospheric Research ($159,000) - Consulting services are for the Sea Grant Review Panel and for the NOAA Panel on Climate and Global Change to provide external guidance and review on funding, program balance, and coordination with the outside community.

Program support ($1,016,000) In FY 1989, $1 million was expended in special studies and analysis for Small Business Innovation Research (SBIR) contracts. This service will continue in FY 1990 and 1991 with $1 million in funding. The Office of the General Counsel plans to use two expert consultants in FY 1991 as the office reviews possible legal action against parties responsible for damage to natural resources in the Damage Assessment and Restoration program. Another consultant will be employed in the Office of Legislative Affairs to assist with policy development. The NOAA Corps customarily contracts for an actuary report on the Commissioned Officers' retirement system. In FY 1990, the Office of Public Affairs will use a contractor as a member of the NOAA Survey Team to assess the damage response system related to Hurricane Hugo.

National Oceanic and Atmospheric Administration
Operations, Research and Facilities

(Periodicals, Pamphlets, and Audiovisual Products)
(obligations in thousands of dollars)

	1988 Actual	1989 Actual	1990 Estimate	1991 Estimate
Periodicals	$ 713	$ 695	$ 797	$ 713
Pamphlets	248	421	431	436
Audiovisuals	117	48	202	205
Total	$1,078	$1,164	$1,430	$1,354

NOAA proposes a total decrease of $76,000 in the use of base funds for periodicals, pamphlets, and audiovisual products for FY 1991. This is reflected by a one-time publication of the Hydrographic Manual approximate cost $75,000, scheduled for publishing in FY 1990. Planned expenditures for these items by activity follows:

National Ocean Service ($96,000) - Expenditures are for periodicals, pamphlets, manuals, and audiovisuals, relating to thu Nautical Charting, the Ocean Services programs, and the the National Geodetic Survey. In addition, the Biennial Report to Congress on Coastal Zone Management will be printed and pamphlets issued regarding NOAA's National Marine Sanctuaries.

National Marine Fisheries Service ($437,000) - Expenditures are for periodicals (market news reports, fishery bulletins, regional newsletters, and the National Marine Fishery Service Review) and pamphlets on inspection, and grading and domestic/export marketing.

Oceanic and Atmospheric Research ($15,000) - Expenditures are for weekly forecast reports on solar-geophysical activity.

National Weather Service ($450,000) - Expenditures are for various weather service charts, maps, bulletins, newsletters, and reports on climate, fire weather, floods, hurricanes, tornadoes, and winter storms.

National Environmental Satellite, Data, and Information Services ($155,000) - Expenditures are for technical data periodicals on meteorology, oceanography, solid-earth geophysics, solar-terrestrial physics, and satellite meteorology. The National Environmental Satellite, Datu, and Information Service also publishes scientific and technical pamphlets which report the results of operational, developmental, and research programs of NOAA, and manuals for the operational programs of the agency. Audiovisual products are primarily slides and viewgraphs used for technical presentations of operational programs at academic and professional society meetings.

Program support ($181,000) - Expenditures are for miscellaneous handbooks for the Office of Aircraft Operations, pamphlets on NOAA work activities, and audiovisuals for public service announcements.

THIS PAGE INTENTIONALLY LEFT BLANK

Justification of Program and Performance

Appropriation: Promote and Develop Fishery Products and Research Pertaining to American Fisheries
(Saltonstall-Kennedy Fund)

1989

In FY 1989, the S-K transfer from the Department of Agriculture to NOAA was $53,688,000. Of this amount, $45,600,000 was used to offset the Operations, research and facilities appropriation. An additional amount of $3,000,000 was transferred to the Fisheries Promotional Fund. The remaining $5,088,000 was used to provide assistance grants for the development of the U.S. fishing industry.

1990

In FY 1990, the S-K transfer from the Department of Agriculture to NOAA was $61,935,000. Of this amount, $55,000,000 was used to offset the operations, research and facilities appropriation. An additional amount of $2,000,000 was transferred to the Fisheries Promotional Fund. The remaining $4,935,000 will be used to provide assistance grants for the development of the U.S. fishing industry. For FY 1990, up to $500,000 in the S-K Fund can be used for grant management and related activities. This will support 11 positions transferred from the ORF account to administer the program.

1991

For FY 1991, NOAA proposes that the entire S-K transfer (est. $61,900,000) from the Department of Agriculture be transferred to the Operations, research, and facilities account to fund fishery conservation and management programs. No funding is proposed for S-K industry assistance grants and the Fisheries Promotional Fund to support the National Seafood Promotional Council. The Fisheries Promotional Fund expires September 30, 1990 and is not proposed for reauthorization in FY 1991. The industry assistance program and the development of seafood marketing plans are inappropriate NOAA roles. Industry, the direct beneficiaries of these efforts, should fund these specific development efforts.

Appropriation: Fisheries Promotional Fund

	Perm. Pos.	Amount
Transfers	-3	0

Three positions and three FTE no longer required in the Fisheries Promotional Fund will be transferred to the Operations, Research, and Facilities account.

Justification of Program and Performance

Appropriation: Fisheries Promotional Fund

1989

In FY 1989, $3,000,000 was transferred to the Fisheries Promotional Fund from the Promote and Develop Fishery Products and Research Pertaining to American Fisheries (S-K Fund) to support the activities of the National Fish and Seafood Promotional Council.

1990

In FY 1990, $2,000,000 was transferred to the Fisheries Promotional Fund from the S-K Fund to support the activities of the National Fish and Seafood Promotional Council.

1991

The Fisheries Promotional Fund expires September 30, 1990 and reauthorization is not proposed. Marketing activities such as the National Seafood Promotional Council, should be supported by the fishing industry. Therefore, a transfer of funds from the S-K Fund is not requested in 1991. NOAA proposes to transfer all S-K Funds to the ORF account to support fishery management and conservation programs.

Appropriation Summary Statement

Appropriation: Fishing Vessel and Gear Damage Compensation Fund

The Fisherman's Protective Act of 1967, as amended by P.L. 95-376, Section 10 (f) (1), September 18, 1978, and P.L. 96-561 of 1980 require that the Secretary of Commerce provide compensation to fishing vessel owners who sustain losses or damage to their gear or vessels while engaged in any fishery subject to the exclusive fishery management authority of the United States under the provisions of the Magnuson Fishery Conservation and Management Act of 1976, provided that the loss is attributable to any foreign vessel, or its crew, or its fishing gear.

The appropriation shall be derived from: (1) all sums recovered in the exercise of rights subrogated under subsection (d) (5) of the Act; (2) administrative fees collected from applicants for compensation; (3) all surcharges imposed upon foreign fishing permit fees not to exceed 20 percent; (4) revenue obtained through the investment of funds collected and not currently needed; and (5) any revenue acquired by borrowing from the Treasury.

Justification of Adjustments to Base and Built-in Changes
(Dollar amounts in thousands)

Appropriation: Fishing Vessel and Gear Damage Compensation Fund

Other Increases:

NOAA requests an appropriation of $1,202,000 to pay claims and administrative expenses under the Fishing Vessel Gear Damage Compensation Fund (FVGDCF). The FY 1990 appropriation level of $1,000,000 will not be sufficient to meet program needs in FY 1991. The requested increase of $197,000 from unappropriated balances in the Fund is necessary to eliminate a backlog of claims, avoid delays in paying claims and to maintain administrative support for the program. Without an appropriation at the requested level NOAA may be unable to meet its statutory obligations.

Adjustment for 1990 pay increase and related cost:

	Pos.	Amount
Total cost in 1990 of pay increase		4
Less amount absorbed		-4
Anticipated 1990 pay increase supplemental		0
Amount in 1991 to provide full-year cost of pay increase		5
Less amount absorbed		0
Subtotal, adjustment in 1990 pay increase		5

Effective January 1, 1990, Federal employees received a 3.6 percent pay increase.

Adjustment for 1991 pay increases and related cost:

	Pos.	Amount
Total cost in 1991 of general pay increase		4
Less amount absorbed		-2
Subtotal, adjustment for 1991 general pay increase		2
Total cost in 1991 of SES pay increase		0
Less amount absorbed		0
Subtotal, adjustment for 1991 SES increased		0
Total adjustment for 1991 pay increases		2

The President's Budget includes an estimated general pay raise of 3.5% effective January 1, 1991. Seventy-five percent of the 1991 costs of that increase will be absorbed.

	Pos.	Amount
Fishing Vessel and Gear Damage Compensation Fund	0	+$195,000

Appropriation Language and Code Citations:

1. For carrying out the provisions of section 3 of Public Law 95-376.

22 USC 1980 (b)

22 USC 1980 (b) - Damages to fishing vessels and gear, compensation.

"Subject to the provisions of this section, the owner or operator...of any fishing vessel...of the United States is eligible for monetary compensation...for any damage to, loss of, or destruction of such vessel, or any fishing gear...or both, if the damage, loss, or destruction-"(1) in the case if such vessel -

"(A) occurs when such vessel is engaged in any fishery subject to the exclusive fishery management authority of the United States under the Magnuson Fishery Conservation and Management Act of 1976, and
"(B) is attributable to any vessel (or its crew or fishing gear) other than a vessel of the United States; or
"(2) in the case of such fishing gear-
"(A) occurs when such fishing gear is being used for fishing in any fishery subject to such exclusive management authority, and
"(B) is attributable to any other vessel, whether such vessel of the United States.

2. not to exceed $1,000,000 to be derived from receipts collected pursuant to that Act,

22 USC 1980 (f) - Fishing vessel and Gear Damage Compensation fund establishment.

"Sums may be expended from the fund only to such extent and in such amounts as are provided in advance in appropriation Acts."

3. to remain available until expended.

no specific authority

31 USC 718 - Appropriations in annual appropriation Acts not permanent, states: "No specific or indefinite appropriation...shall be construed to be permanent or available continuously...unless it is made in terms expressly providing that it shall continue available beyond the fiscal year for which the appropriation Act in which it is contained makes provision."

Justification of Program and Performance

Activity: Fishing Vessel and Gear Damage Compensation Fund
Subactivity: Fishing Vessel and Gear Damage Compensation Fund

Goals and Objectives

Goals: Compensate domestic fishermen whose fishing vessels have been lost, damaged or destroyed by foreign vessel operations in the United States' Exclusive Economic Zone (EEZ) or whose fishing gear has been lost, damaged, or destroyed in the EEZ by foreign or domestic vessels.

Objectives: Compensate vessel owners for loss, damage or destruction of fishing vessel or gear. Provide for timely resolution of claims by vessel owners. Administer the Fund's resources efficiently and effectively.

Base Program

The Fishing Vessel and Gear Damage Compensation Fund is authorized by Section 10 of the Fishermen's Protective Act of 1967, as amended (P.L. 95-376 and P.L. 96-561). It compensates U.S. fishermen whose vessels have been lost, damaged, or destroyed by foreign or domestic vessels. NOAA administers the Fund and indemnifies domestic fishermen against the commercially uninsurable loss of fishing gear caused by foreign or domestic vessels and a portion of the associated economic loss. The risk of losing expensive fishing gear is a major destabilizing factor in some fisheries. Monies paid into this Fund include:
(1) surcharges not to exceed 20 percent of the fee imposed for any foreign fishing vessel permit issued under the Magnuson Fishery Conservation and Management Act;
(2) administrative fees paid by claimants; (3) revenues from deposits or investments of Fund balances not immediately required; and (4) funds not to exceed $5 million borrowed from the Treasury in the event the Fund balance is insufficient to pay claims.

While funded totally by user fees, disbursements can be made only to the extent authorized by appropriation acts.

Appropriation Summary Statement

Appropriation: Fishermen's Contingency Fund

Title IV of the Outer Continental Shelf Lands Act Amendments of September 18, 1978, (P.L. 95-372, Section 402) as amended, established the Fishermen's Contingency Fund. The Fund is to be used by the Secretary of Commerce to compensate domestic fishermen for the damage or loss of fishing gear, and any resulting economic loss due to natural obstructions or man-made obstructions related to oil and gas exploration, development, and production in any area of the Outer Continental Shelf.

For purposes of administration, the Secretary of Commerce is authorized to establish the Fishermen's Contingency Fund to pay claims and to request assessment by the Secretary of the Interior of the oil and gas industry to capitalize the Fund. Any holder of a lease, an exploration permit, easement, or right of way on the Outer Continental Shelf is required to pay to the Secretary of the Interior an amount not to exceed $5,000 per lease, permit, easement, or right of way per calendar year. The Secretary of the Interior will deposit these collections in the Fishermen's Contingency Fund established by the Secretary of Commerce.

Title IV stipulates that amounts available can be disbursed only to the extent provided for by appropriations acts.

Justification of Program and Performance

Activity: Fishermen's Contingency Fund
Subactivity: Fishermen's Contingency Fund

Goals and Objectives

Goals: Compensate domestic fishermen for damage or loss of fishing gear due to obstructions related to oil or gas exploration, development, and production on the Outer Continental Shelf (OCS).

Objectives: Minimize financial instability of the fishing industry caused by competing uses of the OCS. Provide for timely resolution of claims by vessel owners. Administer the Fund's resources efficiently and effectively.

Base Program

The Fishermen's Contingency Fund is authorized under Section 402 of Title IV of the Outer Continental Shelf Lands Act Amendments of 1978. NOAA compensates U.S. commercial fishermen for damage or loss of fishing gear, and resulting economic loss caused by obstructions related to oil and gas exploration, development, and production in any area of the Outer Continental Shelf. The funds used to provide this compensation are derived from fees collected on an annual basis by the Secretary of the Interior from the holders of leases, exploration permits, easements, or rights-of-way on the OCS.

Funded totally through user fees, disbursements can be made only to the extent authorized in appropriation acts.

Appropriation Summary Statement

Appropriation: Foreign Fishing Observer Fund

The Foreign Fishing Observer Fund was originally established by Public Law 96-339, which amended the Atlantic Tunas Convention Act of 1975. The Fund includes the Observer Program provided for by the Magnuson Fishery Conservation and Management Act, as amended, (P.L. 94-265). Under these laws, U.S. observers are placed aboard foreign fishing vessels fishing within the Exclusive Economic Zone (EEZ) of the United States to monitor compliance with U.S. fishery laws and to collect data for the management of U.S. fisheries. The Fund is financed through fees imposed on owners and operators of the foreign fishing vessels that fish within the EEZ. The Foreign Fishing Observer Fund is to be used by the Secretary of Commerce to pay salaries, administrative costs, and data management costs associated with full observer coverage aboard foreign fishing vessels. In addition, beginning in FY 1985, foreign fishermen were permitted to contract directly with approved contractors to obtain observers.

16 USC 1827 stipulates that the amounts available in the Fund can be disbursed only to the extent and in the amounts provided for in advance in appropriation acts.

(Dollars amounts in thousands)

Appropriation: Foreign Fishing Observer Fund

	Pos.	Amount
Adjustment for 1990 pay increase and related cost:		
Total cost in 1990 of pay increase		21
Less amount absorbed		-21
Anticipated 1990 pay increase supplemental		0
Amount in 1991 to provide full-year cost of pay increase		28
Less amount absorbed		- 0
Subtotal, adjustment in 1990 pay increase		28

Effective January 1, 1990, Federal employees received a 3.6 percent pay increase. In 1990, NOAA is absorbing the full cost of this pay increase.

	Pos.	Amount
Adjustment for 1991 pay increases and related costs:		
Total cost in 1991 of general pay increase		22
Less amount absorbed		-16
Subtotal, adjustment for 1991 general pay increase		6
Total cost in 1991 of SES pay increase		0
Less amount absorbed		0
Subtotal, adjustment for 1991 SES increase		0
Total adjustment for 1991 pay increases		6

The President's Budget includes an estimated general pay raise of 3.5% effective January 1, 1991. Seventy-five percent of the 1991 costs of that increase will be absorbed.

Appropriation Language and Code Citations:

For expenses necessary to carry out the provisions of the Atlantic Tunas Convention Act of 1975, as amended, (Public Law 96-339), the Magnuson Fishery Conservation and Management Act of 1976, as amended, (Public Law 94-265 and P.L. 97-453) and the American Fisheries Promotion Act, (Public Law 96-561), there are monies appropriated from the fees imposed under the Foreign Fishing Observer Program authorized by these Acts, not to exceed $2,000,000, to remain available until expended.

16 USC 1824(b)(10)

"Reasonable fees shall be paid to the Secretary by the owner or operator of any foreign fishing vessel for which a permit is issued.."

16 USC 1827

16 USC 1827 authorizes the Secretary to establish a program under which a U.S. observer will be stationed aboard each foreign fishing vessel while that vessel is in waters within the fishery conservation zone [equivalent to the exclusive economic zone (EEZ)] established under section 101 of the Act of 1976, and the convention area as defined in Article I of the International Convention for the Conservation of Atlantic Tuna; and is taking or attempting to take any species of fish if such taking or attempting to take may result in the incidental taking of billfish. 16 USC 1827 also establishes the Foreign Fishing Observer Fund in the Treasury of the United States and provides that payments made by the Secretary to carry out this section be paid from the fund only to the extent and amounts provided for in advance in appropriation acts.

	FTE/Obl.	18	1,711	36	2,394	36		36			

Justification of Program and Performance

Activity: Foreign Fishing Observer Fund
Subactivity: Foreign Fishing Observer Fund

Goals and Objectives

Goals: Provide 100 percent observer coverage aboard foreign fishing vessels fishing within the United States' EEZ. Increase compliance with fishery regulations and requirements. Support balanced conservation and management measures to achieve and maintain the optimum use of our living marine resources.

Objectives: Collect data to determine foreign compliance with fishery regulations and the status of fish stocks within the EEZ of the United States. Administer the base and supplemental observer programs in a cost-effective, efficient manner.

Base Program

The Foreign Fishing Observer Fund was authorized by Public Law 96-339, which amended the Atlantic Tuna Convention Act of 1975, and the American Fisheries Promotion Act of 1980, (Public Law 96-561), which amended the Magnuson Fishery Conservation and Management Act (MFCMA). The fund is financed through fees collected from foreign governments with fishing vessels fishing within the exclusive fishery jurisdiction of the United States. The fund is used by NOAA to pay salaries, administrative costs, data editing and entry costs, and other costs incurred in placing observers aboard foreign fishing vessels. This includes long-line vessels fishing in the Atlantic billfish and shark fishery and other foreign fishing vessels fishing within the EEZ of the United States. Such fishing requires a permit issued under the MFCMA. The observer program is conducted primarily through contracts with the private sector. NOAA places these observers aboard foreign fishing vessels to collect scientific information and to monitor compliance with the fishery management measures. Amounts available in the Fund can be disbursed only to the extent and in amounts provided for in advance in appropriation acts.

Beginning in FY 1985, Congress approved the establishment of a supplemental observer program. The program provided that foreign vessels without Federally-funded observers will be required to obtain the services of private individuals certified by the Secretary of Commerce.

Output Performance Measures

	1989 Actual	1990 Estimate	1991 Estimate
Percent observer coverage of foreign fishing within the U.S. EEZ as required by the:			
- Atlantic Tuna Convention Act	100	100	100
- American Fisheries Promotion Act	100	100	100

NOTE: This performance data represents the combined impact of appropriated funds and direct contracting by foreign governments.

Justification of Adjustments to Base and Built-in Changes

(Dollar amounts in thousands)

	Perm. Pos.	Amount
Other Increases:		
Air carrier services	0	+$4,938

In FY 1991, the Administration is requesting and increase of $4,938,000 (object class 25.0) to fund Aviation Weather Services. Of this amount, $4,074,000 has been directly offset by a reduction in ORF direct obligations. To maintain a constant level of Aviation Weather Services, NOAA has used ORF funds to pay for inflationary cost increases for which funds were not appropriated out of the Trust Fund. The requested increase to the Trust Fund appropriation and corresponding decrease to ORF will realign costs between these two accounts to more accurately reflect each program costs. The remainder ($864,000) represents an increase for pay and other cost charges (personnel shown in ORF reimbursables).

Justification of Program and Performance

Activity: Aviation Weather Services Program Trust Fund
Subactivity: Operations and Research

Goals and Objectives

Goals: To furnish weather information for safe, efficient aircraft operations and management of the National Airspace System as recommended by the Department of Transportation's Federal Aviation Administration (FAA) under provisions of the Federal Aviation Act of 1958 and in accordance with International Civil Aviation Organization agreements.

Objectives: To provide required forecasts for airports and en route aviation operations.

Base Program

- The NWS provides a broad range of services in support of the aviation community. Fifty-two Weather Service Forecast Offices (WSFOs) prepare site specific airport terminal forecasts three times per day with amendments as needed for over 500 public use airports in the 50 states and in the Caribbean. These offices also produce about 300 individual route-oriented forecasts three times per day for the 48 contiguous states. Weather Service Offices (WSOs) also take observations to meet local aviation requirements.
- The National Aviation Weather Advisory Unit, a dedicated aviation unit within the National Severe Storms Forecast Center (NSSFC), prepares Area Forecasts three times daily describing general aviation weather conditions over the lower 48 states. This unit also issues in-flight advisories of hazardous weather conditions associated with thunderstorms, icing turbulence, strong low-level winds, and broad areas of low clouds and/or restricted visibility. In Alaska and Hawaii, these products are issued by WSFOs.

Mr. Smith. Testifying in support of the request we have Under Secretary John Knauss. Since this is your first appearance, I will insert your biographical sketch in the record.

[The information follows:]

BIOGRAPHY

JOHN A. KNAUSS

UNDER SECRETARY FOR OCEANS AND ATMOSPHERE, AND ADMINISTRATOR OF THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION
U.S. DEPARTMENT OF COMMERCE

John A. Knauss, under secretary for oceans and atmosphere and administrator of the Department's National Oceanic and Atmospheric Administration (NOAA), took office August 7, 1989.

A noted oceanographer and educator, Knauss was a professor of oceanography at the Graduate School of Oceanography at the University of Rhode Island (URI). He also served as dean of the URI Graduate School of Oceanography from 1962 to 1987, and as the university's provost for marine affairs from 1969 to 1982.

Knauss has been a member of two presidential commissions on marine affairs: the Commission on Marine Science, Resources, and Engineering (the Stratton Commission) in 1967 to 1968 and the National Advisory Committee on Oceans and Atmosphere (NACOA), 1978 to 1985. He served as chairman of NACOA from 1981 to 1985. He has been president of the Association of Sea Grant Program Institutions, chairman of the Ocean Science Committee of the National Academy of Sciences/National Research Council, and chairman of the Marine Division of the National Association of State Universities and Land-Grant Colleges.

He has served as president of the oceanographic section of the American Geophysical Union (AGU), vice president of the Marine Technology Society (MTS), vice chairman of the American Association for the Advancement of Science's (AAAS) Atmospheric and Hydrospheric Sciences Section, and as council member of the American Meteorological Society. He was a co-founder of the Law of the Sea Institute and served on its governing board from 1965 to 1976 and 1981 to 1987. He has been elected a fellow of the AAAS, the AGU, and the MTS.

Knauss graduated from Massachusetts Institute of Technology (B.S., 1946), the University of Michigan (M.S., 1949), and the University of California, Scripps Institution of Oceanography (Ph.D., 1959).

November 1989

Opening Statement

Mr. Smith. Do you have a statement?

Dr. Knauss. Yes, sir.

Mr. Smith. Do you want to summarize it or have it put in the record?

Dr. Knauss. Summarize and have the full statement put in the record.

Mr. Smith. All right.

Dr. Knauss. It is a pleasure to be here. On behalf of the President, I note that we requested approximately $1.4 billion for NOAA including $34.5 million which is proposed for transfer from the Airport and Airways Trust Fund, sir.

Mr. Smith. How much?

Dr. Knauss. $34.5 million is the proposed transfer from the Airport And Airways Trust Fund, sir.

I take pleasure and pride in presenting NOAA's fiscal year 1991 budget request. As you noted, it is the first budget that I have had an opportunity to present to you. I believe this budget demonstrates the strong support NOAA received from Secretary Mosbacher and from President Bush.

Our fiscal year 1991 request represents an increase of about 34 percent over the 1990 request. And as you have already noted, it is an increase of nearly 9 percent over our current funding level. It demonstrates the administration's commitment to understanding, protecting and preserving our environment. It enables NOAA to maintain its position as what I have been calling this nation's earth systems agency.

We are asking for increases over the current funding level in three initiatives: climate and global change; modernization of the National Weather Service; and our Coastal Ocean Science Program.

In addition, this budget proposal moves much closer, I believe, to addressing most of the concerns and priorities that Congress has made evident in the past. For example, we have included funds for the National Sea Grant College Program and the Coastal Zone Management Program as well as substantial increases in the budget for our fisheries programs. For the first time, we have a $2.5 million base program for damage assessment in oil spill and chemical contamination episodes. As always, however, the realities of deficit reduction have forced some hard choices. But given the difficult fiscal problems, I believe this budget truly reflects a careful approach to addressing the truly national needs of our nation.

As I noted, Mr. Chairman, I would like to submit the full testimony for the record. We are proposing significant funding increases in fiscal year 1991 for two major NOAA-wide initiatives—programs that cut across line organizations within NOAA.

CLIMATE AND GLOBAL CHANGE

The first is climate and global change. NOAA's request for our contribution to that program is $87 million. That is an increase of $69 million over the FY 1990 funding level.

NOAA is a vital complement to the U.S. effort as a whole. We have unique talents and special capabilities to bring to bear on some of the highest priorities identified by the Committee on Earth Sciences, the group that coordinates the overall effort. Our fiscal year 1991 budget will allow us to expand our limited understanding of greenhouse warming, ozone depletion, water resources and year-to-year climate change.

I would like to emphasize, Mr. Chairman, that in addressing the long-term and very critical concerns of global warming, I believe that the knowledge we gain from the research will provide several useful products within a very few years. As our ability to forecast longer time scales improves, the economic benefits to the nation improves dramatically.

For example, I believe it is possible within three to five years to provide seasonal climate forecasts in the 30 to 90-day average range for atmospheric conditions in selected regions of the world, including North America, that will be significantly better than what we can presently do. I am hopeful that within eight to ten years it will be possible to begin useful predictions of year-to-year variations in climate over large portions of the world.

These kinds of reliable seasonal interannual weather forecasts are of tremendous economic importance. If, for example, we can predict severe drought conditions we can prepare for it. We can more effectively compensate for reductions in food stocks. If we can predict unusually cold winters, we can prepare for it. We can arrange for adequate fuel oil supplies.

Several charts that detail the kinds of projects NOAA will undertake in fiscal year 1991 to meet these objectives are attached to the full testimony.

COASTAL OCEAN SCIENCE PROGRAM

The second program is the continuation of our coordinated Coastal Ocean Science Program that we have just begun in FY 1990. Our budget requests $17.4 million for this program. It is an increase of $11 million over current funding levels. The Coastal Ocean Science Program is designed to improve our understanding of environmental issues affecting the quality of our coastal waters. Our goal is to better understand the detailed reasons for our deteriorating coastal environment so that we can provide improved and meaningful data and information for policy decisions at all levels of government; state, local and federal.

I am particularly pleased that for the first time in many years NOAA's budget request includes funds for Coastal Zone Management and the National Sea Grant College Program. We will be testifying soon in support of a reauthorization of the Coastal Zone Management account, which we have restructured as a coordinated national effort designed to maintain a balance between resources protection and coast-related marine activity. Our budget requests $30 million for grants under this program.

In addition, the Sea Grant Program proposed to be funded at $27 million will support many of NOAA's marine-related activities, one of which is our Coastal Oceans Program. I welcome the contribution made by these programs that have been zeroed out in previous administration budgets and restored by Congress. They are valuable both as stand-alone programs and as important components to our high-priority NOAA-wide initiative.

NATIONAL WEATHER SERVICE MODERNIZATION

Continuation of the National Weather Service modernization is another highlight in our budget request. I would like to emphasize that our request contains sufficient funds to maintain existing operations at all weather offices in FY 1991. The budget requests $76 million over current funding levels of about $100 million for the systems necessary to implement the very important modernization program that is now under way.

Keeping the modernization of our National Weather Service on schedule is one of my highest priorities. These state-of-the-art systems we are acquiring will enable us to predict, with increased accuracy, weather conditions across the United States. Improved predictions of severe weather such as tornadoes will dramatically improve our ability to respond to the safety and economic impact of these severe natural events.

Finally, sir, I would like to mention several other key aspects of NOAA's FY 1991 budget. Our Fisheries budget addresses legislative mandates in the area of marine mammal protection. We also propose to begin addressing long-deferred infrastructure problems.

Thank you, Mr. Chairman. I have Dr. Rodney Weiher, sitting at the table with me, our NOAA comptroller. Directly behind us are senior members of our staff who are prepared to address any specific questions you might have, sir.

[The statement of Dr. Knauss follows:]

STATEMENT BY THE UNDERSECRETARY
FOR OCEANS AND ATMOSPHERE
U.S. DEPARTMENT OF COMMERCE

JOHN A. KNAUSS

BEFORE THE HOUSE APPROPRIATIONS
SUBCOMMITTEE ON COMMERCE,
JUSTICE, AND STATE, THE JUDICIARY
AND RELATED AGENCIES

March 2, 1990

Mr. Chairman and members of the Committee, I am pleased to appear before you today in support of the FY 1991 budget request for the National Oceanic and Atmospheric Administration (NOAA). NOAA is requesting total budget authority of $1,422,084,000 which includes $34,521,000 proposed for transfer from the Airport and Airways Trust Fund.

I take particular pride and pleasure in presenting NOAA's FY 1991 budget request to you today. In contrast to budget proposals of the recent past, this request has a very exciting story to tell. Our FY 1991 request represents an increase of about 34% over the 1990 request, and is an increase of nearly 9% over our current funding level. Our budget proposal is consistent with President Bush's desire to be the "environmental President" and his commitment to understanding, protecting, and preserving our environment, and enables NOAA to maintain its current position as, in my opinion, the earth systems agency.

This budget proposal has been thoughtfully designed to reflect a rational, organized approach to funding important national programs and meeting critical national goals. We are requesting increases over the current funding level in our three highest-priority initiatives: that is, Climate and Global Change, modernization of the National Weather Service, and our Coastal Ocean Science program. In addition, although our proposal differs from the FY 1990 appropriation in some respects, I believe our budget proposal moves much closer to addressing many Congressional concerns and priorities that have been evident in the past. For example, we have included funds for the National Sea Grant College Program and the Coastal Zone Management grants in our proposal. We have proposed a budget for our Fisheries programs that represents a substantial increase over prior requests.

As always, however, the realities of deficit reduction force us to make the hard choices necessary to address what are truly the needs of our nation today. I believe this budget reflects this crucial balance. Let me share with you the highlights of our 1991 budget request.

The request funds essential ongoing programs and activities and program increases in our high-priority areas. As I mentioned, our proposal places a high priority on active participation in the U.S. Global Change Research Program; continues emphasis on our Coastal Ocean Science program; and continues our ongoing program of modernization of the National Weather Service. I would like to discuss some of the details of these important programs, starting with the President's climate and global change research program.

NOAA's request for our contribution to the U.S. Global Change Research Program (USGCRP) is $87 million, an increase of $69 million over current funding levels. NOAA's Climate and Global Change Program is a vital component of the U.S. effort and enables us to bring our unique talents and special capabilities to bear on some of the highest priorities identified by the Committee on Earth Sciences in the USGCRP Research Plan. Consistent with CES priorities, NOAA has chosen to focus on those changes in the Earth's climate system that confront us with major economic, social, and environmental challenges. Our FY 1991 budget emphasizes the need to improve our presently limited understanding of processes such as greenhouse warming, ozone depletion, regional drought, water resources and year-to-year climate change.

The commitment to establish the aggressive scientific program outlined by the CES agencies is a significant policy decision recognizing the need to improve our understanding of the Earth system, reduce major scientific uncertainties in the decision process, and continually re-evaluate the effectiveness of policy in the light of new scientific insight. NOAA will work with other agencies and the scientific community, to synthesize authoritative information on global change in a form useful to decision-makers. NOAA's mission and expertise have led us to assume responsibility as a principal operational climate prediction and information service agency in the National Program.

It might be helpful if I outlined some of the important new prediction services which we expect to derive from the program. In so doing, I would like to call to your attention the fact that useful products will become available from NOAA's program within a very few years. As our ability to forecast on longer time scales improves, the economic benefits to the nation improve dramatically. For example,

- It will be possible within three to five years, we believe, to provide seasonal climate forecasts--that is, forecasts of 30 to 90 day average atmospheric conditions--for selected regions, including North America.

- Within eight to ten years, it will be possible to begin routine predictions of year-to-year variations in climate over large portions of the world, including North America. These six-month to one-year forecasts will be based on a greatly improved understanding of how the tropical ocean induces changes in global climate patterns.

- Although the challenge of modelling the Earth system on decadal timescales is an inherently long-term effort, the Program outlined by CES will begin to narrow some of the significant scientific uncertainties very soon. NOAA will play a major role in these long-term efforts.

Our FY 1991 proposal will allow us to contribute to three major USGCRP objectives: documenting global change, focused process studies, and climate modelling and prediction. The attached charts, which I would like to submit for the record, summarize our climate prediction efforts and detail the types of projects NOAA will undertake in FY 1991 to meet the USGCRP objectives.

Another high-priority request in 1991 is the continuation of our coordinated coastal ocean science program initiated in 1990. Our budget requests $17.4 million for this program, an increase of $11 million over current funding levels.

As you know, the coastal ocean program is designed to improve our understanding of the environmental issues affecting the quality of our coastal waters and improved data for policy decisions at all levels. In FY 1991, the Coastal Ocean Program will focus its efforts in five areas: Nutrient-Enhanced Productivity; Estuarine Habitats; Coastal Fisheries Ecosystems; Toxic Chemical Contamination; and Physical Impacts. I would like to describe each of these elements briefly.

Nutrient-Enhanced Productivity results from the accumulation of algae-producing materials such as nitrogen and phosphorus in our Nation's water bodies. This accumulation of excessive algae reduces the oxygen needed to sustain fisheries and other organisms in the marine food chain. Our FY 1991 program will focus on assessment of the extent of this problem, research and modelling in the Gulf of Mexico and the Southeast, and evaluation of the effects of atmospheric nitrogen in the East Coast estuaries.

Second, expanding our **Estuarine Habitats** efforts will contribute to the President's goal of "no net wetland loss". Expanded wetlands mapping from satellites, habitat research, modelling, and evaluation of wetland restoration techniques will improve our abilities to meet this important National priority.

Third, we will expand our **Coastal Fisheries Ecosystems** efforts, with the goal of developing more accurate and reliable fisheries models which leads to more effective fisheries management plans. In recent years, the demand for seafood has risen dramatically, and there are no major new fisheries to develop. Therefore, effective fisheries management plans, based on models which take into account natural variability, are critical, especially as the emphasis on fish as an important and healthful protein source continues to increase. Both human activities and natural changes in the coastal ocean environment affect fisheries dynamics and populations. These must be recognized as we develop more accurate and efficient fishery management plans. In the past, we have applied this ecosystem approach to one of the largest fisheries in the world, the Bering Sea Pollock fishery, which is now an important resource valued at at least one billion dollars per year.

Fourth, we will continue ongoing assessments of highly polluted marine environments. Our **Toxic Chemical Contamination** efforts are designed to provide the information necessary for informed decision-making to safeguard our Nation's marine resources. In FY 1991, we will emphasize understanding the effects of toxic chemicals on estuarine habitats and their living resources.

Fifth, we will expand our efforts in **Physical Impacts**. This element of the Coastal Ocean Program focuses on improving predictions of tsunami and hurricane flooding, thereby reducing hazards to coastal resources. In FY 1991, we will upgrade the tsunami measurement system in Alaska and enhance efforts in hurricane flooding prediction.

Finally, much of the research and assessment needed to address coastal ocean problems relies on similar basic ocean data. We will enhance our ocean observation, communication, and data and information management and delivery systems to facilitate efficient provision of these data to decision-makers. The attached charts, which I would like to submit for the record, summarizes our FY 1991 Coastal Ocean Program.

Other NOAA programs will contribute to the Coastal Ocean Science program as well. For the first time in many years, NOAA's budget request includes funds for Coastal Zone Management Act grants and the National Sea Grant College Program. We will be testifying soon in support of the reauthorization of the Coastal Zone Management Act, which we have restructured as a coordinated national effort designed to maintain a balance between resource protection and coastal-related marine activity. Our budget requests $30 million for grants under this program. In addition, the Sea Grant Program, proposed to be funded at $27 million, will support many of NOAA's marine-related activities, one of which is our coastal ocean program. I welcome the contribution made by these programs, as both stand-alone programs and as important components of our high-priority initiatives.

The final highlight in our budget request is the continuation of the National Weather Service modernization. I am pleased to assure you that our request contains sufficient funds to maintain existing operations at all weather offices in 1991. The budget requests $76 million over current funding levels for the systems necessary to implement the modernization.

Keeping the modernization of the National Weather Service on schedule is one of my highest priorities. The state-of-the-art systems we are acquiring will enable us to predict, with increased accuracy, weather conditions in the United States. Improved prediction of severe weather such as tornadoes and thunderstorms will dramatically improve our ability to inform the public allowing timely response to the safety and economic impacts of these severe natural events.

The 1991 budget requests a $43 million increase for Next Generation Rador **(NEXRAD)**. By October 1991, eleven of these enhanced doppler radars will be delivered. Secondly, the budget requests a $5 million increase for the **Automation of Service Observations (ASOS) Program**, to continue the full-scale production contract which will be awarded in August 1990.

Thirdly, the budget requests a $21 million increase for the **Advanced Weather Interactive Processing System (AWIPS)**. **AWIPS** will allow us to proceed with technology development and prototype deployment at the Modernization and Associated Restructuring Demonstration (MARD) sites. Finally, the budget requests a $7 million increase for **NOAAPORT** to initiate GOES data remapping and data communications capability.

In addition, the budget contains an increase of $11 million for the **Modernization and Associated Restructuring Demonstration and Implementation (MARDI)**. This is a key element of the modernization program, as it will demonstrate the new technology and service improvements, provide professional development for NWS Staff and implement the service improvements nationwide.

The attached chart summarizes our NWS modernization output for Fiscal Year 1990 and 1991.

This budget provides funding associated with the annual cost of procuring spacecraft, launches, and associated ground systems for the polar and geostationary orbiting environmental satellites. Funds are also requested to complete and launch LANDSAT 6.

With new FY 1990 resources, NOAA is building a small interdisciplinary damage assessment team to respond to major incidents that harm its public trust resources, including national marine sanctuaries, fisheries, and marine mammals. This team will assess damages, support NOAA damage claims against responsible parties, and plan and implement restoration of damaged habitats.

Finally, I would like to mention very briefly several other key aspects of NOAA's 1991 budget proposal. Our Fisheries budget is responsive to key problems in fisheries data collection and management, and addresses critical legislative mandates in the areas of marine mammal protection and Driftnet Act compliance. We propose to address infrastructure problems through a NOAA-wide facilities maintenance program, and by making improvements in our fleet of ships and aircraft.

Thank you Mr. Chairman, I am excited and enthusiastic about this budget request, my first as Administrator of NOAA. I hope that you and this Committee will share my enthusiasm and I look forward to working with you as we proceed in this process. I would be happy to address any questions which you or other members of the Committee might have regarding our budget request. I also have with me today Rodney Weiher, NOAA Comptroller, and other senior members of my staff to address specific issues and questions.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION
1991 CONTRIBUTION TO USGCRP

DOCUMENTING GLOBAL CHANGE

- OPERATIONAL OCEAN OBSERVATION
- GLOBAL SEA LEVEL
- STRATOSPHERIC OZONE
- DATA AND INFORMATION MANAGEMENT SYSTEM

FOCUSED PROCESS STUDIES

- ROLE OF OCEAN IN CLIMATE CHANGE
- SOURCES, SINKS, BEHAVIOR OF GREENHOUSE GASSES
- CLOUDS, WATER VAPOR AND HYDROLOGICAL CYCLE
- ECOSYSTEM RESPONSE, CLIMATE AND RELATED STREESSES

CLIMATE MODELLING AND PREDICTION

- OPERATIONAL OCEAN MODELLING
- NEAR-TERM FORECASTING
- LONGER-TERM CLIMATE PREDICTION

OMB REQUEST

Mr. SMITH. What was your request to OMB?

Dr. WEIHER. In the OR&F account, the total budget authority was $1,461,549,000.

Mr. SMITH. What did the difference represent? What was cut out?

Dr. KNAUSS. We didn't get all the money we wanted for modernization. That was reduced by about $20 million, as I remember.

Mr. SMITH. Is that in the Weather Service?

Dr. KNAUSS. Yes, I am sorry. That was the big one that I remember. There are several others.

Mr. WEIHER. Well, essentially Fisheries, some of the fishery programs, particularly the seafood inspection program. We have gone into the $30 million request. That did not come out of OMB because the policy on seafood inspection was not finalized.

SEAFOOD INSPECTION

Mr. SMITH. What were you proposing to do with seafood inspection?

Dr. KNAUSS. We were proposing a program of seafood inspection which would be paid for by industry. The $30 million we were requesting was to help us get geared up to start that program over the next year.

Mr. SMITH. Would that be continuous inspection or sample inspection?

Dr. KNAUSS. It would be sampling inspection as proposed by the National Academy of Science.

Mr. SMITH. How are they different from the volunteer inspection programs you now have?

Dr. KNAUSS. It would be mandatory rather than voluntary, sir.

Mr. SMITH. Other than that it would be the same?

Dr. KNAUSS. It would be essentially the same. There would be some differences.

SEA GRANT

Mr. SMITH. You proposed cuts in Sea Grant in your budget. Did you ask for the full amount?

Dr. KNAUSS. No, we got what we asked for, sir. What we asked for was less than what Congress gave us last year, but it is $27 million more than we asked for the previous year. The previous years we asked for zero for Sea Grant.

SEQUESTRATION

Mr. SMITH. What was the impact of sequestration, how many dollars?

Dr. WEIHER. In fiscal year 1990 it ends up that we had a very small impact. We didn't have a sequestration in the OR&F account. As we go into FY 1991, we have taken about a $6 million sequestration.

Mr. SMITH. Not significant, then?

Dr. WEIHER. Well, $6 million doesn't sound significant until you try to find it.

Dr. KNAUSS. We were fortunate in the last year in that our budget for satellite procurement was down considerably over the previous year, so that solved that problem. Our satellite budget, it seems like a large satellite budget to me, but by NASA's standards it is very small. It does go up and down depending on year-to-year procurement. It was down $50 million this year over last year and it will be up about $50 million next year over this year. It does go up and down depending on where we stand in the cycle.

Mr. SMITH. In handling sequestration, are you taking across the board reductions or are you emphasizing taking more out of some programs than others?

Dr. WEIHER. No, they are across the board. The good news is we have significant funding for the pay increases. We have funding not only for the 1990 pay increase, but we have funding for part of the 1991 pay increase, which is something we have not had in the past.

Mr. SMITH. In the fiscal year 1990 budget?

Dr. WEIHER. In the budget before you right now.

Mr. SMITH. In the 1991 budget, yes.

PROGRAM AUTHORIZATION LEGISLATION

Mr. SMITH. What is the status of your authorizing legislation?

Dr. WEIHER. We estimate that we have about $283 million in programs that need authorization this year.

Mr. SMITH. Do you expect them to be authorized soon?

Dr. WEIHER. We expect a great deal of them to be.

Dr. KNAUSS. The Magnuson Fisheries Act is a somewhat controversial act. That may take a while. We are proposing some changes in reauthorization of the Coastal Zone Management Act. We don't expect difficulty in getting it reauthorized, but it may take a while for it to work its way through both the House and the Senate.

Mr. SMITH. What about LANDSAT?

Dr. KNAUSS. The Landast authorization expired September 30, 1989. We are requesting reauthorization through 1991 to continue funding for the completion and launch of Landsat 6.

Mr. SMITH. You have in your budget a proposal to transfer this $36 million I asked you about. That takes authorization, too, doesn't it?

Dr. WEIHER. Yes sir, that would be an FAA authorization.

Mr. SMITH. Do you expect that Act to be extended?

Dr. WEIHER. We expect it to be.

Mr. SMITH. You did ask, for the first time in eight or nine years, for a number of these programs that have been added by Congress in the past, but you only ask for part of Sea Grant and part of Coastal Zone Management. Those are programs that have had strong support. I confess I don't know nearly as much about them as some of the other members of the subcommittee, but they think those programs are very important. What are your reasons for leaving out parts of those?

Dr. KNAUSS. We think they are very important programs, too, sir. However, in building a budget for this year based upon NOAA's total budget, we felt that by showing our involvement and interest in these programs at this level, it at least kept us within our overall budget constraints. These are not low priority projects, but we felt we could leave out certain aspects and still have a strong federal program both in Sea Grant and Coastal Zone Management.

Mr. SMITH. For example, Sea Grant——

Dr. KNAUSS. For example, within Sea Grant we maintained the research and educational aspects of it and we dropped the advisory parts of it, believing that these are probably programs that could be done and perhaps should be done within the states.

Mr. SMITH. You think the States will pick that up?

Dr. KNAUSS. I think that given enough time, they can pick these up, yes.

Mr. SMITH. What are these advisories?

Dr. KNAUSS. Remember the extension agents?

Mr. SMITH. Yes.

Dr. KNAUSS. These are equivalent to the extension agent programs for Sea Grant.

Mr. SMITH. You think they will pick them up in one year?

Dr. KNAUSS. Give them enough notice, they might.

Mr. SMITH. It would be pretty difficult in one year, though, wouldn't it?

Dr. KNAUSS. Might be.

Mr. SMITH. I will yield at this time to Mr. Rogers.

Mr. ROGERS. Thank you, Mr. Chairman.

GLOBAL CHANGE RESEARCH PROGRAM

Let me ask you about the global change research program, one of the President's priorities. Agency-wide I am told that is a billion dollar project?

Dr. KNAUSS. That is about right.

Mr. ROGERS. What is NOAA's principal role in that effort?

Dr. KNAUSS. NOAA has a very key role in it. I would say there are three federal agencies that play key roles in the climate and global change program: NASA, which is putting up a set of special satellites with respect to this program; the National Science Foundation, which is responsible for supporting much of the basic science related to this program; and NOAA, which has the primary responsibility for monitoring both the atmosphere and the ocean for the data management with respect to these programs and for developing the predicted capability with respect to these programs.

Mr. ROGERS. You have requested for FY 1991—this year apparently here you have got 80——

Dr. KNAUSS. Eighteen million dollars.

Mr. ROGERS. I am sorry, $18 million, yes. What are those big increases, what are they to be used for?

Dr. KNAUSS. They are primarily, Mr. Rogers, to develop our observational program, much of it having to do with ocean observational program as well as making significant improvements in our data management program with respect to the large amounts of data that are being collected both nationally and internationally, and to put that data in a form that can be used by researchers and others in making progress in this area.

Mr. ROGERS. Who is the lead agency in the global change?

Dr. **Knauss**. There is no lead agency in that sense. It is a program under the science advisors that is coordinated through the Committee on Earth Sciences, CES.

Mr. **Rogers**. Is that a Cabinet level group?

Dr. **Knauss**. Dr. Bromley is an advisor to the President. I forget what his title is.

Mr. **Rogers**. He is the coordinating person?

Dr. **Knauss**. It is coordinated out of his office.

Mr. **Rogers**. NASA gets the big end, $661 million?

Dr. **Knauss**. Those satellites are very expensive, I found.

Mr. **Rogers**. Well, what is the end of that program? Are you pointing toward a report?

Dr. **Knauss**. No. Let me emphasize several things about that program, Mr. Rogers. The long-term goal of this program is to really understand to what extent greenhouse gases are being added to the atmosphere. There is no question about that, but rather what effect it will have on our climate over the next 20, 30 years.

That is a long-term and critically important goal. Depending upon how much warming there is, you can either have little or devastating effects on the economy of this country as well as the economies of the world.

In the process of getting there, we are going to make significant improvements in NOAA in our ability to do what I would call middle-range forecasting. We are quite certain, based upon our ability to monitor and develop an understanding of how the ocean atmosphere system works, that we will be able to make significant improvements on our forecasts over 30 to 90 days.

We now are making those kinds of forecasts, and they are not bad, but they are not as good as we would like. We think we can make significant improvements in those forecasts over a three- to five-year time frame. We think that within a decade we will be able to make significant forecasts on an interannual basis.

That is forecasting what the weather will be like in a general sense the following year. If we can make those kinds of improvements in our seasonal forecasts and in our year-to-year forecasts, the economic payoff from that in terms of being able to know whether or not there will be droughts, or if there will be especially cold winters so we can prepare for those things, the benefits will more than pay for this research even if we do not succeed in learning very much about climate, greenhouse gas warming and the effect on the climate 30 years from now.

I expect we are going to learn about that. It is a difficult problem. Our long-term goal is that in the process of getting there, we are going to be able to do these other things as well.

CLEAN AIR ACT AMENDMENTS

Mr. **Rogers**. The Clean Air Act amendments—we had Secretary Mosbacher before us yesterday. I told him how disappointed I was that the department has taken a powder on the Clean Air Act rewrite, the department that has in NOAA probably the best and most talented staff in terms of collecting and interpreting statistics highly relevant to agency government to tell us about what is needed in the Clean Air Act. Yet, we have seen nothing out of the Department of Commerce and specifically NOAA. It is as if there is a great big vacuum out there from this agency that has a corner on the environmental statistical market. I just wonder if you have a comment on that?

Dr. KNAUSS. We have provided information to the Administration and to Congress with respect to our observations, measurements and all those items that are under the Clean Air Act, and in particular to something called NAPAP, the National Acid Precipitation Assessment Program, which is an interagency program, but which is housed in NOAA. We have systematically provided that information to the Administration and to Members of Congress. We in NOAA do not have any regulatory responsibility with respect to the Clean Air Act.

There are limits to what we can do. We have never been backward in providing the kind of information that one needs for developing those regulatory responsibilities.

Mr. ROGERS. When is the NAPAP study due?

Dr. KNAUSS. By the first of October, although I believe in fact, the report should be available by August.

Mr. ROGERS. That is just about the time we are going to finish with the Clean Air Act in Congress.

Dr. KNAUSS. I understand.

Mr. ROGERS. Can you speed that up six months, six weeks, two months, a day?

Dr. KNAUSS. I think it is not correct to say that the results of this program are any secret.

Mr. ROGERS. Well, they are to me and to the Congress.

Dr. KNAUSS. Not to some of your staff, sir. We have had a major study, a major conference down in Hilton Head just two weeks ago which was attended by about 600 people, where the results of this study were worked over very hard by a number of people, where all the reports were looked at and discussed and so forth. We are now in the process of putting that together as a final report for one more final review.

Mr. ROGERS. Would you be willing to testify before the Energy and Commerce Committee or any committees of the Congress on the NAPAP findings?

Dr. KNAUSS. I would, but I would also suggest that perhaps Jim Mahoney, who is the director of that NAPAP study, who is on our staff, might be a more——

Mr. ROGERS. Well, whoever.

Dr. KNAUSS. Yes, there is no question about that. We would be prepared to do so.

Mr. ROGERS. I would hope you would volunteer your services. The information you have, and I am not familiar with what it is, has got to be very credible, solid, well researched information. Here the Congress is now on the verge of passing clean air legislation which is going to cost somebody tens of billions of dollars, particularly the consumers, and here is an agency of the government which possesses very valuable information which no one knows about. We spent billions of dollars on NAPAP, have we not?

Dr. KNAUSS. Yes, we have.

Mr. ROGERS. And spent 10-years on it.

Dr. KNAUSS. It is a 10-year program, that is right.

Mr. **Rogers**. I can't understand, Congress is passing this astounding piece of legislation and this valuable information is laying there unused and even untrumpeted. I really have to wonder what in the devil is going on at Commerce and NOAA that that has happened.

Dr. **Knauss**. We have indeed made this information available to Congress, to EPA, and to the Administration. I like to think that information has been used. It is true that our final report is not out. It was not asked to be out until this time. That is what our authorization said we should do. We have not made a secret of our findings. They are findings because NAPAP is an interagency program. It represents the combined findings of EPA, Department of Energy and others.

Mr. **Rogers**. Do you have something now in a written form, a preliminary report or something? My staff doesn't have it, the industry doesn't have this information. If you have given it out, boy, you sure did it very judiciously.

Dr. **Knauss**. Your staff may not have it, but I believe many people do have it. I will see to it that your staff does get it, sir. We do indeed have some information.

Mr. **Rogers**. How soon can we get it?

Dr. **Knauss**. I suspect today or tomorrow.

Mr. **Rogers**. Okay. We have been waiting on NAPAP for ten years. That is all I have heard for the last ten years. Wait until you get the report out before you act. The Congress and the President finally said we're going to do something about clean air this year. I don't understand why you don't speed up the conclusion of that report before we take action. Can you speed it up two or three months, the final report?

Dr. **Knauss**. I honestly don't know, sir. I can check.

Mr. **Rogers**. Who does know?

Dr. **Knauss**. Mr. Mahoney. I will find out. I can't report to you at this time. I can do some checking, and I will check.

Mr. **Rogers**. Will you do that for me?

Dr. **Knauss**. Yes, of course.

WEATHER SERVICE MODERNIZATION

Mr. **Rogers**. You have requested $177 million for the Weather Service modernization. Could you give us a couple of minutes worth on what that is going to include, what that money is to be used for?

Dr. **Knauss**. I will let Mr. Friday answer that question, he could probably give you more information in two minutes than I can.

Mr. **Friday**. The increased funding requested for Weather Service modernization for this year is primarily associated with the procurement of major capital investment beginning 1991. It represents an increase of $43 million in the next generation weather radar program. We will see the first of the operational installments this year. FY 1991 is the beginning of the major production and installation schedule there.

A substantial amount of funds are included in the budget for the facilities preparation as we are moving into a modernized structure. It includes an increase of funds for the automated observing systems going in around the country. These are only the Department of Commerce portions of the funding. Funds for these programs are also included in the budgets of the Department of Defense and the Department of Transportation, FAA.

In addition to that, it includes money for the final development and the initial deployment phases of the automated weather information processing system for the new field structure. It includes the beginning of the money for the actual implementation of the activities, including the training of personnel. In addition to the capital investment of new equipment, we also have to retool our people as well in preparing them for the new technologies and the new phase we will be entering into.

Those are the appropriations requested this year for the modernization of the service.

Mr. WEIHER. Attached to the longer statement are some tables that spell that out in a little more detail.

Mr. ROGERS. What portion of the total NEXRAD cost is Commerce paying for?

Mr. FRIDAY. 50 percent. Essentially half of that is Commerce. The other half is split between the Department of Defense and the Department of Transportation.

Mr. ROGERS. Let me thank you for responding to a complaint from my hometown in Somerset, Kentucky about the weather recordings that were giving out some terrible news when it was a beautiful, clear day and people were scratching their heads and wondering what was going on, but you got that fixed.

Mr. FRIDAY. We hope we have it fixed, sir.

Mr. ROGERS. The newspaper had a field day with us on that one.

GOES WEATHER SATELLITES

The GOES weather satellites, we have one running?

Dr. KNAUSS. That is right.

Mr. ROGERS. What is the life expectancy?

Dr. KNAUSS. We think there is a less than 10 percent chance of it going down before 1993. I believe that is right.

Mr. ROGERS. This request you have now includes launching in 1991?

Dr. KNAUSS. That is correct.

Mr. ROGERS. Can you meet that schedule if you have the money?

Dr. KNAUSS. Yes. It is our present understanding that we will be able to meet that schedule under the present circumstances. There are still one or two problems with the GOES satellite in terms of the development. Our information from the contractor and from NASA is that we can meet the schedule.

Mr. ROGERS. Will you be making significant changes in the satellite from the old one?

Dr. KNAUSS. They have turned out to be significant. We thought it was a small-step increase in the improvement of the satellite. One of the reasons why it has taken us somewhat longer than planned and one of the reasons why it has been more expensive than planned was those small-step increases turned out to be a major developmental problem.

Yes, they will indeed give us more information and better information than the present satellite.

Mr. **Rogers**. Let me guess, the price went up?

Dr. **Knauss**. Absolutely.

Mr. **Rogers**. Will you get a better bird, as they say, with more information coming from it?

Dr. **Knauss**. Yes, we will get more information, we will get better information and it will be more continuous.

Mr. **Rogers**. Is it designed to replace the old GOES?

Dr. **Knauss**. This is a next generation of GOES. When a new one comes up, it will replace the old one. We have five of this new generation. Eventually we will be back to a two-GOES system. They will be a new generation.

Mr. **Rogers**. But you will have two up at any given time?

Dr. **Knauss**. It is our present plan to have two up at any given time once we get back on schedule, yes.

Mr. **Rogers**. How big a factor in all of this is this shuttle schedule?

Dr. **Knauss**. Not at this time. We are now planning to launch GOES without the shuttle.

Mr. **Rogers**. How will you launch?

Dr. **Knauss**. Mr. Pyke probably knows this better than I do.

Mr. **Pyke**. These satellites were originally planned to be launched on the shuttle. We are now planning to use rockets procured under a commercial launch services contract.

Mr. **Rogers**. Has that been done?

Mr. **Pyke**. NASA has contracted for those launches. They are scheduled to be synchronized with the availability of the spacecraft.

Mr. **Rogers**. The launching vehicle should be no holdup?

Mr. **Pyke**. Right, sir.

Mr. **Rogers**. Suppose the old GOES goes down before you get the new one up? What happens then?

Dr. **Knauss**. We have been concerned about that. We do have a series of contingency plans. We have done a dry run recently with respect to how we might operate under that contingency plan. In essence, what we would be doing is using our polar orbiting satellites to provide information in a comparable sense to the kinds of information that we get from the GOES satellite. It will not be anywhere near as good. It will provide the kind of backup, at least at some level, that we will need. Hopefully we are prepared for it in case it happens.

Mr. **Rogers**. What will be the total cost of the current contract for these five satellites that will be launched?

Dr. **Knauss**. I am told, Mr. Rogers, we will not have the latest estimate until the end of March from NASA on that. I will get it to you as soon as we do.

Mr. **Rogers**. If you have a general idea, we will even take a rough estimate at this point.

Dr. **Weiher**. Right now we are talking in the order of $600 million.

Mr. **Rogers**. Total cost?

Dr. **Knauss**. Total cost.

Mr. **Rogers**. Launch vehicles included?

Mr. **Pyke**. What has been given is a rough estimate of the cost for the spacecraft complete with their instruments. The launches are in addition to that. They are also provided for in the budget.

Dr. **Knauss**. The estimate of the total cost of the GOES satellite is around $600 million. That cost has been expanding over time. The launch vehicles, once we went from shuttle to—that has not changed over time. That is fixed. I don't carry that number in my head. That has not been the problem. The problem has been with the expanding cost of the GOES satellite itself.

Mr. **Rogers**. The satellites costs $600 million. What are the launches going to cost?

Mr. **Pyke**. The current estimate, as contained in the fiscal year 1991 budget, is slightly over $500 million for the five launches.

Mr. **Rogers**. Over what span of time will those launches take place?

Mr. **Pyke**. Beginning in FY 1991 and continuing until the year 2000.

Mr. **Rogers**. Interspersed more or less evenly over that period of time?

Mr. **Pyke**. Yes. We designed a launch schedule to be able to take advantage of the fact that we expect these satellites to last five years, which is their designed life. We plan to have a launch and new spacecraft to be able to replace them when they are needed.

Mr. **Rogers**. You would have two up at any given time, and you would replace the one that got five years old or went out, I suppose?

Dr. **Knauss**. I think we would probably wait until such time as we need to replace them.

Mr. **Rogers**. You may not launch five in that span?

Dr. **Knauss**. We may be able to stretch out the launch beyond 2000.

Mr. **Rogers**. I am surprised these don't last longer than they do. What is the reason for the short span?

Dr. **Knauss**. I believe because they are operational satellites, we try to be a bit conservative in our estimates because we need them up on a regular basis. The present, or the first of the GOES satellites, did have a problem in that they, believe it or not, burned out light bulbs. For the one that is up, we replaced that system with another system of—light emitting diodes.

The point is if we hadn't replaced or made that slight improvement in the present GOES satellite, we could be on zero satellites now, because this one has lasted longer than the previous four have lasted. Although we have a design life for these of five years, we are all hopeful they will last longer than that.

Mr. **Pyke**. These satellites are among the most complex devices mankind has ever built. They have electronic and electromechanical components on board as well as on-board fuel to send back the imagery and other information that we require. In the early experience with the GOES satellites, despite everyone's best efforts out at NOAA, NASA and contractors, we were lucky to get two, three, even four years out of the satellites.

GOES, the one that failed a year ago, through a lot of diligent effort on the part of our staff in managing the fuel on board and the use of the satellite, we were able to get almost six years out of that satellite. The design lifetime of these satellites is five years. That is based on the expected lifetime of the various components and the amount of redundancy that is built into the spacecraft. There is an inherent limiting lifetime for these spacecraft based on the amount of fuel on board in order to keep them within the range necessary to take the imagery.

Dr. Knauss mentioned the 1993 date as the latest date that we could have the current GOES operating. That is based on the expected end of availability of adequate fuel to keep it operating.

Mr. **Rogers**. The fuel you are talking about is the fuel required to station it?

Mr. **Pyke**. It is to station it. These satellites tend, by natural phenomena, to move away from the equator. They are 22,000 miles up, over the equator. They tend to move away from the equator. They need to be shoved back towards it to get the kind of imagery we need in order to provide the data that the National Weather Service and others need to forecast.

Mr. **Rogers**. Thank you.

HARBOR MAINTENANCE TRUST FUND TRANSFER

Mr. **Smith**. You are proposing to transfer money from the Harbor Maintenance Trust Fund to the Marine Waterways Trust Fund. Why is that?

Dr. **Weiher**. It is a user fee that we are proposing. Essentially what we are proposing to do is to create a new fund within the Corps of Engineers Harbor Maintenance Fund, which would——

Mr. **Smith**. Are those the fees on banks?

Dr. **Weiher**. These are fees on cargo coming and going in coastal ports in the United States. It doesn't apply to inland waterways. We would estimate, essentially, what the Corps right now charges, as I understand, about $4 per $10,000 worth of cargo. They are proposing to raise that to about $11.

Mr. **Smith**. It is an existing fee that you are proposing to increase?

Dr. **Weiher**. That increase the Corps would do, we would propose to increase it to go an additional dollar per $10,000 of cargo. That, we estimate, would generate about $45-1/2 million, which we would use to offset various NOAA marine-related programs.

Mr. **Smith**. As far as our scoring and our caps, it has no benefit to us? Is it scored the same way?

Dr. **Weiher**. It would be scored just the same way that the Aviation Trust Fund is scored.

Mr. **Smith**. Why isn't this done in the authorizing bill, or is this a proposal in your authorization?

Dr. **Weiher**. This is a proposal.

Mr. **Smith**. I see.

Dr. **Knauss**. This is a fund that had been in existence for some time in the Army Corps of Engineers. This will be the first time NOAA will be a part of that fund.

Mr. **Smith**. That proposal is before which committee?

Dr. **Weiher**. As I understand, the Administration is considering packaging up a whole set of user fee proposals. Those would be submitted up here. Obviously they would find their way both to the authorizing committees and, I presume, to the Ways and Means and Finance Committees.

ZEBRA MUSSEL

Mr. SMITH. We have received a letter here with a good many Members' names on it about the zebra mussel problem. What can you tell us about that problem?

Dr. KNAUSS. Well, the zebra mussel is indeed a problem, Mr. Chairman. Zebra mussel is a European mussel that found its way into the Great Lakes essentially attached to the hull of a ship such as barnacles are attached. It is a new and exotic species. It doesn't seem to have enough natural enemies as far as the Great Lakes are concerned. There is some reason to believe it is beginning to clog up inlet pipes in somewhat the same way barnacles do. It is growing rapidly.

We have put together a team of people from our various research laboratories. We are trying to assess the magnitude of the problem and what we can do about it.

We agree with the letter that you have there. I haven't seen the letter. But, we are certainly convinced that it can be a very real problem. We are trying to get a handle on the situation—it is a relatively new phenomenon.

Mr. SMITH. Does your FY 1991 budget reflect the amount of research that is needed?

Dr. KNAUSS. We do not have any funds in our proposal, per se, for the zebra mussel. We expect, through Sea Grant, the Great Lakes Environmental Research Laboratory and so forth to address that problem.

Mr. SMITH. Adequately?

Dr. KNAUSS. I hope adequately. Until we know a little bit more about the nature of the problem, it is a little difficult for me to tell you we are in a position to address it adequately. I can guarantee a year from now when we come here, if we better understand the problem, we will be able to better address it.

Mr. SMITH. What part will the Great Lakes Laboratory carry out?

Dr. KNAUSS. I am not sure exactly. Dr. Ostenso is our Acting Chief Scientist.

Dr. OSTENSO. They play a key role, as do the network of Sea Grant colleges and the EPA Laboratories. Its potential is to be a more severe problem than the lamprey problems in the Great Lakes.

Mr. SMITH. Well, my question really is how does what you are saying now coincide with the proposed cut in that lab?

Dr. OSTENSO. We are hopefully balancing that problem over support for the Sea Grant program to maintain our total effort.

Mr. SMITH. You said they have a key role. Will that lab get more money out of Sea Grant?

Dr. OSTENSO. They are working together. This past year we have developed a joint institute of formal working relationship between the Sea Grant network and the laboratory supporting that research.

	1990 Appropriation to Date			Request to Secretary		Request to OMB		Request to Congress		
Comparison by activity:	Perm. Pos.	FTE	Amount	FTE	Amount	FTE	Amount	Perm. Pos.	FTE	Amount

Marine Waterways Trust Fund	0	0	0	0	0	0	0	0	752	45,481

Mr. SMITH. It seems to me that you are saying you won't have any more resources between Sea Grant and the lab?

Dr. KNAUSS. No, we won't have. That is true. But what we will be doing is when we have a major problem like this, we will essentially say this is a higher priority and we will be spending some time working on this problem, which will mean we will be doing less in other areas.

I am not prepared to tell you at this point how the laboratory directors are going to have to readjust their priorities. But we have indeed targeted this as a major concern.

Mr. SMITH. So you look for something to eat these mussels?

Dr. KNAUSS. We would like to find a way to kill them.

Mr. SMITH. Then you look for something to eat, whatever it was you said, the mussels?

Dr. KNAUSS. We would hope that whatever eats those mussels would be soft so they don't close up the pipes.

LANDSAT SATELLITE

Mr. SMITH. You are requesting an increase of $1.6 million for LANDSAT. What are the recommendations of the Department to the National Space Council concerning options for continuing LANDSATs after LANDSAT 6?

Dr. KNAUSS. The Space Council is under advisement at present on the issue of the continuation of LANDSAT after LANDSAT 6 and who should pay for it. At this time no formal decision has been made with respect to how that will be done. That decision will be made, it is my understanding, some time within the next year. As of this moment, we know where we are going with respect to the launch of LANDSAT 6. Beyond LANDSAT 6, who will pay for it, how it will be arranged, how it will be done is something that is still under consideration within the Administration, sir.

Mr. SMITH. Well, is there any significant movement toward resolving who is going to pay for it?

Dr. KNAUSS. I hope so. Yes, sir. I can assure you that it will have to be resolved before the next budget cycle.

Mr. SMITH. Are you still getting resistance from the people who say it is so important, but don't want to pay anything for it?

Dr. KNAUSS. As far as the budget for this year and next year, those agencies within the Federal Government who do indeed use LANDSAT, are indeed paying for it.

Mr. SMITH. Not voluntarily?

Dr. KNAUSS. Well, the money arrives.

Mr. SMITH. They are still objecting to it, I suppose. If we don't keep the pressure on, they will not want to continue. Are they still resisting?

Dr. KNAUSS. I can't say that they are really resisting it. Everybody has a tight budget. Nobody likes to pay for anything they don't have to.

SILVER SPRING RELOCATION PROPOSAL

Mr. SMITH. Tell us about your move to Silver Spring? What is the status of that project?

Dr. **Knauss**. We are moving into Buildings 1 and 2 of Silver Spring. NOAA would be perfectly prepared to essentially move into Building 3 and 4 of Silver Spring. There are no funds in the budget to cover that move. At the moment, the move to Silver Spring Buildings 3 and 4 is not on our agenda for FY 1991.

Mr. **Smith**. What impact does that have on you?

Dr. **Knauss**. It is difficult to say what impact it has. We operate around the city in various buildings in the general area, both in Rockville and in Suitland. We have another facility up on Dupont Circle as well as the consolidation movement in Buildings 1 and 2 in Silver Spring. I think there is no question that there would be some advantages if we could all be together, but I don't know that it is perhaps worth the cost.

Mr. **Smith**. It is not as high a priority as some other things you have?

Dr. **Knauss**. That is why it is not in our budget, sir.

Mr. **Smith**. Okay. We have several more questions we will ask, but that is all I have.

Mr. Rogers?

Mr. **Rogers**. I have nothing further.

Mr. **Smith**. We will submit some more questions to you for the record.

Thank you.

[The following questions were submitted to be answered for the record:]

QUESTIONS SUBMITTED BY MR. SMITH

REQUEST TO OMB

QUESTION:

What was your budget request to OMB for FY 1991, what items were eliminated from that request, and what will be the impact on your activities as a result of those reductions?

ANSWER:

The FY 1991 budget authority (ORF) request to OMB was $1,464,089,000. The following items were reduced by OMB.

(Dollar amounts in thousands)

ACTIVITY/ITEM	OMB REDUCTION
NATIONAL OCEAN SERVICE	
Geodesy equipment	$1,000
Oil spill response and assessment	1,500
Coastal ocean science	13,730
NATIONAL MARINE FISHERIES SERVICE	
Bering Sea pollock research	250
Habitat research	322
West coast groundfish	57
Pacific salmon treaty	292
Protected species	574
SEAMAP	58
Gear entanglement	44
Econ/comm. fish statistics	181
PACFIN	1,000
Nearshore analysis/stock abundance	57
ADP upgrades	1,300
Regional fisheries mgmt. councils	234
Marine fishing fee implementation	1,522
Enforcement and surveillance	500
Fisheries trade promotion	12
Product quality and safety	2,091
Mandatory seafood inspection	30,000
OCEANIC AND ATMOSPHERIC RESEARCH	
Climate and global change	24,005
GFDL computer	200
PROFS	1,883
GLERL	1,100
NURP	7,000

NATIONAL WEATHER SERVICE

NWS Southern Regional HQ	852
NWS Pacific and AK HQ	383
Equipment maintenance	1,054
Agricultural and Fruit Frost Program	1,277
NEXRAD	7,318
ASOS	2,600
AWIPS	14,133
NOAAPORT	4,050
Class VII computer	500

NATIONAL ENVIRONMENTAL SATELLITE, DATA AND INFORMATION SERVICE

Polar satellites	33,819
Geostationary satellites	24,394
Landsat oversight	1,100
Data and Information service	200

PROGRAM SUPPORT

Facilities maintenance	1,779
Facilities consolidation	1,000
Ship reactivation/DAS	5,961
Science/survey platform improvement	2,000
Aircraft operations base funding	700

There will be no impact on our programs as a result of OMB reductions. The projects reduced or eliminated should be appropriately funded by the states or the locality which directly benefits, since these projects are not the responsibility of the Federal Government. In addition, we concentrate only on high priority projects/programs that are central to NOAA's mission.

IMPACT OF SEQUESTRATION

QUESTION:

What amounts were sequestered from your FY 1990 appropriations, and what will be the impact of those reductions on your programs in FY 1990?

ANSWER:

The following table reflects sequestered amounts from NOAA's FY 1990 appropriation.

(Dollar amounts in thousands)

Fishermen's Contingency Fund	$2
Foreign Fishing Observer Fund	23
Aviation Weather Services Trust Fund	417
TOTAL:	442

There will be no programmatic impact of these reductions. They will be taken through reductions in travel, transportation, and contracts.

STATUS OF AUTHORIZING LEGISLATION

QUESTION:

Please provide for the Record a listing of the programs and projects which were funded in FY 1990 and the amounts for each, which are not authorized, for FY 1991 and were omitted from your budget request.

ANSWER:

(Dollar amount in thousands)

NATIONAL MARINE FISHERIES SERVICE

Information Collection and Analysis

Resource Information	
Stock enhancement/disease research	$ 4,287
Atlantic salmon research	500
Antarctic research	1,300
Chesapeake Bay Studies	1,600
Sub-Arctic bottomfish research	753
Hawaii FMP development	400
Alaska salmon enhancement activities	3,766
Yukon River Chinook study	235
Oyster disease research	500
Field structure consolidation	4,000

Conservation and Management Operations

Fisheries Management Programs	
Columbia River Program	9,300
Manage Georges Bank fisheries	471

State and Industry Assistance Programs

Terminate Inter-jurisdictional Fisheries grants	3,500
Terminate anadromous grants	2,354
Terminate striped bass research	471
Terminate support of Interstate Fisheries Commission	330
Reduce Product, Quality & Safety Research (PQS)	4,400
Terminate fish oil research	942
Terminate Mahi Mahi export strategies funding	188
Terminate Model Seafood Inspection Program	330
Terminate water standards research	500
TOTAL:	40,127

OCEANIC AND ATMOSPHERIC RESEARCH

Climate and Air Quality Research

Terminate National Climate Program	1,090
Terminate Regional Climate Centers	1,800
Terminate Intergovernmental Panel on Climate Change	250
TOTAL:	3,140
TOTAL, OPERATIONS, RESEARCH, AND FACILITIES	43,267

Proposal for Later Transmittal

QUESTION:

Please list for the Record each of the programs and projects which you are proposing to eliminate or reduce in FY 1991, which were funded in FY 1990.

ANSWER:

The following list provide programs/projects which are proposed for elimination or reduction in FY 1991, but were funded in FY 1990.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION

FY 1991 BUDGET

OPERATIONS, RESEARCH, AND FACILITIES

FY 1991 PROPOSED DECREASES

(Dollars in Thousands)

NATIONAL OCEAN SERVICE	Decrease
Mapping, Charting and Geodesy

o Marine Electronic Agenda	675
o Beaufort, N.C. Lab. Maintenance	200
TOTAL Decreases	**153,810**

OCEAN COASTAL INITIATIVE

QUESTION:

You are requesting an increase of $11 million to continue and expand the research initiative in Coastal Ocean Science. What information do you hope to gain from this research program?

ANSWER:

NOAA's Coastal Ocean Program is more than a research program. It is a long-term program designed to improve coastal and Great Lakes environmental decisions by supplying timely, scientifically sound information. The

Program will deliver valuable services and products to local, state, and federal lawmakers; coastal resource managers; and federal and academic researchers as they work to solve coastal ocean problems. The Program will deliver a wide spectrum of valuable information and products. For example, NOAA will:

- Provide coastal resource managers with detailed information and develop models on the effects human-induced nutrient over-enrichment has in the Mississippi River Plume, Louisiana continental shelf, and the Southeast Atlantic Bight. These represent some of our most productive coastal areas and are particularly vulnerable to human activities.

- Assess the severity of nutrient over-enrichment throughout U.S. coastal waters through its National Status & Trends program and monitor areas with substantial problems.

- Provide information on how the atmosphere transports nutrients into our coastal waters. Evidence suggests significant amounts of nutrients enter our coastal waters via the atmosphere. The East Coast of the U.S. is particularly vulnerable to this. NOAA studies will help identify where nutrients are coming from so that responsible management policies can be implemented to reduce them.

- Provide resource managers with up-to-date mapping information on the status and rate of change of coastal wetlands via satellite. NOAA will do this through its CoastWatch-land program which will provide coverage for most coastal wetlands areas in the U.S. This information will enable resource managers to readily assess habitat conditions on a frequent, 1-acre basis and evaluate the impact erosion, pollution, and development have on them.

- Provide detailed information on the success of techniques used to restore lost and damaged wetlands and on the function and health of tidal wetlands, seagrasses, and mangroves. Over 70% of commercial fisheries rely on these estuaries for survival, yet almost 20,000 acres are lost annually. The information and models from NOAA will enable lawmakers and resource managers to implement programs to safeguard and restore this valuable resource.

- Establish CoastWatch-water throughout the U.S. to enable resource managers and decisionmakers to identify, monitor, and predict unusual environmental events, such as red tides, that could adversely impact their fisheries. CoastWatch-water will also provide researchers with a valuable tool to study the impact of natural variability on fisheries.

- Provide lawmakers and resource managers better information on toxic chemical contaminates where they come from and how they affect living marine resources, so they can act appropriatly to reduce contaminants and their effects on important resources.

- Improve the predictions of tsunami inundation on West Coast, Alaskan, and Hawaiian coastal communities and upgrade the tsunami measurements system in the Gulf of Alaska.

- Provide better predictions of hurricane flooding of vulnerable U.S. coastal locations by adding predictions for one additional site per year.

- Improve NOAA's ability to get its data and information into the hands of those who need it by:

  - Expanding Coastal Ocean Management, Planning, and Assessment System (COMPAS) which will be implemented in Texas this year. COMPAS is a geographic information system (GIS) designed for state coastal resources managers. It is a user-friendly computer system that provides information on the coastal environment such as pollution, land use, and habitat status. COMPAS will help state resources managers meet Clean Water Act reporting requirements; improve management of shellfish waters; identify impacts of wetlands permitting; and measure impacts of coastal development and land use.

  - Improving its Ocean Communications Network (NCON) by upgrading its telecommunications and analysis (Interactive Marine Analysis and Forecast System) capabilities at existing sites and adding capabilities to new sites throughout the U.S. These capabilities make data and information more available to government and academic fisheries scientists, oceanographers, and meteorologists.

QUESTION:

How much have you spent to date on this effort, and what information have you gained so far?

ANSWER:

NOAA just recently received the FY 1990 money Congress appropriated for the Coastal Ocean Program (see the chart on the next page). NOAA management has approved specific projects within the program and has transferred funds to get them started. Some of these efforts are research-oriented and long-term in nature. The valuable information they provide will come later; however, other activities will provide immediate information on the coastal ocean. For example, by the end of FY 1990:

- We will have more information on the impacts toxic chemical contaminants have on living marine resources (i.e. reproduction impairment). We will also know about the levels and trends of contaminants in the Hudson-Raritan Estuary and Tampa Bay -- two coastal areas with substantial contaminant problems.

- CoastWatch will enable NOAA to map coastal wetlands in the Chesapeake Bay and sea grasses in South Carolina to assess the impact that human activities (i.e. development, erosion, and pollution) have on these critical resources.

- Demonstration of COMPAS in Texas (a geographic information system designed for state resource managers), will enable NOAA to evaluate the system's effectiveness and make necessary adjustments before implementing it in other states.

- NOAA will expand its knowledge of and ability to track unusual environmental events that can impact important fisheries.

Part of the FY 1990 funds will improve NOAA's information delivery system by adding new stations to its Ocean Communications Network.

QUESTION:

What is the total budget plan for this project?

ANSWER:

The President's FY 1991 request for the Coastal Ocean Program is $17.4 million. NOAA has identified seven broad areas within the Program where the funds will be allocated (in millions):

	FY90 Allocation	FY91 Allocation
Toxic Chemical Contamination	$ .87	$ 2.00
Nutrient Over-Enrichment	1.91	3.30
Physical Impacts	--	.20
Estuarine Habitats	1.83	4.00
Coastal Fisheries Ecosystems	--	3.50
Information Delivery Systems	.92	2.00
Satellite. & Conv. Observations	.87	2.40
TOTAL	$6.40	$17.40

NWS MODERNIZATION PROGRAM

QUESTION:

You are requesting a total increase of $76,526,000 for systems acquisition for the National Weather Service. How much of this amount is for production and installation of equipment, and how much is for applied research and development?

ANSWER:

Of the $76,526,000 increase for systems acquisition requested in the President's FY 1991 budget, $28,996,000 has been identified as supporting risk reduction, research and development activities. The remaining amount of $47,530,000 will support production and installation of equipment. It should be noted that of the $28,996,000, $26,500,000 is associated with the AWIPS/NOAAPORT program and will be used for risk reduction activities and for development of software/hardware for the Development Phase contract (the second stage of the A-109 major systems acquisition process). The following table provides a detailed distribution of these estimates.

	Research & Development	Production & Installation	Total
NEXRAD	1,196	42,088	43,284
AWIPS/NOAAPORT	26,150	2,217	28,367
ASOS	1,650	3,725	5,375
Class VII	0	- 500	- 500
TOTAL	28,996	47,530	76,526

QUESTION:

Could the amounts for the production of NEXRAD units and production of the automated surface observing systems be stretched out if the budget situation requires a reduction?

ANSWER:

NEXRAD:

The Government cannot stretch out the production or funding of NEXRAD units without major cost penalties. With exercise of the full-scale equipment option of the Unisys contract, the Government committed the Departments of Commerce, Defense, and Transportation to contractually specified incremental funding on an annual basis to fund production costs for the contractual schedule of deliveries.

Fixed pricing contained in the full-scale NEXRAD production option with Unisys is based on an economic quantity buy of a large quantity over a specified period of time designed to maximize production efficiencies. Pricing of this economic quantity was greatly influenced by the intensity of the competition between A-109 rival vendors. Failure to meet contractual funding requirements and delivery schedules would result in settlement costs for termination of the contract and a forced renegotiation of fixed prices. Renegotiated contracting arrangements would be based on a more costly, year-by-year purchase--where quantities of goods to be purchased are influenced solely by a single year's requirements and no economies of scale for a long-term production run are realized. Renegotiation of contract pricing on a sole source basis with Unisys would lack any downward pressure on pricing from the competitive marketplace.

ASOS:

The automated surface observing system (ASOS) production contract award currently is scheduled for August 30, 1990, with deployment of NOAA units extending from January 1991 through December 1994. Stretching out the production schedule would entail significant additional costs both within the ASOS program and for the NWS modernization as a whole.

The NOAA deployment schedule is integrated with schedules for the other Federal agencies (FAA and DOD) in such a way that: (1) a cost-effective overall national deployment for the three agencies is achieved; and (2) NOAA's formal schedule commitments to FAA and DOD are maintained. Significant delays in the NOAA schedule would inevitably lead to higher unit costs for all three agencies.

In addition, the current NOAA schedule for deployment of ASOS is linked to reductions in staff time for taking observations that will permit redirection of staff to implement other critical elements of the NWS modernization. ASOS delays would impact overall NWS modernization staffing requirements.

The NWS plans to acquire ASOS at the lowest cost to the Government by contractually committing to a fixed deployment schedule for the entire base program (250 NWS units, 592 FAA units, 86 Navy units), together with "cancellation liabilities" should the Government change schedules or other plans. Schedule delays following production contract award would be extremely costly.

QUESTION:

Will NOAA maintain all existing public warning and forecast stations until the new automated radar and observer systems are installed and operational?

ANSWER:

The FY 1991 Budget includes funding to maintain all existing public warning and forecast offices. When the new Weather Forecast offices assume forecast and warning services with no deterioration of existing services, current weather service offices will be consolidated.

QUESTION:

Has the National Weather Service developed a plan or schedule for closing of stations when the new automated systems are in place?

ANSWER:

The National Weather Service (NWS) has defined a process for complying with the certification requirements of P.L. 100-685. This process involves many more steps than just implementing automated systems. The steps to implementing the NWS modernization and associated restructuring program are described in a hierarchy of transition implementation plans. The National Implementation Plan (NIP) provides broad guidance for the internal elements of the NWS and for the external users of its warning and forecast services. The NIP is based on the Strategic Plan for the Modernization and Associated Restructuring of the National Weather Service that was published in March 1989.

The next tier in the planning hierarchy consists of the NWS Regional Transition Plans (RTPs). These plans provide regional guidelines for the realignment of operational responsibilities. The RTPs specify the specific program changes required and the steps to accomplish these changes in order to maintain a smooth transition from present operations to the modernized and restructured mode.

The final tier of the planning hierarchy consists of the Site Implementation Plans (SIPs) which detail specific actions and schedules for accomplishment of elements of the modernization and restructuring process. A separate SIP will be prepared for each Weather Forecast Office (WFO) and its area of responsibility and for each River Forecast Center (RFC) within the NWS. It is within these SIPs that specific plans and schedules for realignment of services, including the closing of offices, will be addressed in compliance with the certification requirements of P. L. 100-685. The precursor actions to the certification process will be identified within the individual SIPs and detailed schedules will be presented. The schedules as to when specific items will be accomplished will depend on several classes of activities such as advanced technology (e.g., the advanced NEXRAD radar system, the Automated Surface Observing Systems (ASOS), and the Advanced Weather Interactive Processing Systems (AWIPS)) implementation, professional staffing adjustments, and training of NWS meteorologists and hydrologists in the use of the advanced technological systems and scientific applications.

SATELLITE OBSERVING SYSTEMS

QUESTION:

The budget reflects a reduction of $9.5 million for operational support for LANDSAT-4 and LANDSAT-5. What are the status of those satellites? Will they cease to be operational at the end of FY 1990?

ANSWER:

Landsats 4 and 5 were designed to operate three years. Landsat 4 has been in operation eight years; Landsat 5 has been operating for six years. While both satellites have lost much of their redundancy, they continue to supply useful data to domestic and foreign users. Both satellites are expected to cease operating.

POLAR ORBITING SYSTEM

QUESTION:

You are requesting an increase of $49,472,000 for the Polar Orbiting System. What is the status of this program, what are the current launch dates, and do you expect those dates to be met?

ANSWER:

The NOAA-D spacecraft (NOAA-12 after launch) is scheduled for launch in July 1990. It will replace NOAA-10, which was launched in September 1986, and has experienced progressive solar array degradation and is rapidly approaching the end of its useful life. Integration of instruments with the spacecraft have begun for NOAA I and J. For the NOAA K, L,M spacecraft series, work has begun. Projected launch dates are tabulated below. It should be noted that actual launch dates are a function of the performance and capabilities of the currently operational spacecraft with launches conducted under a replace-as-needed policy. Under this policy, a launch failure could require availability of a replacement satellite as much as one year earlier than the projected launch date. Current schedules are designed to meet that contingency.

SATELLITE	PROJECTED LAUNCH DATE
NOAA - D	July - 1990
NOAA - I	May - 1991
NOAA - J	January - 1992
NOAA - K	December- 1993
NOAA - L	August - 1995
NOAA - M	July - 1996

GOES SATELLITE SYSTEM

QUESTION:

The budget reflects a reduction of $26.2 million for the Geostationary (GOES) System. Three years ago the Committee was informed that there could be a $300 to $400 million cost increase for the GOES program. If so, what is the reason for this proposed reduction?

ANSWER:

The FY 1991 budget request represents the year-to-year fluctuation in funding required for this program. It incorporates a reduction of $32 million for spacecraft and an increase of $6 million for launch services. This change recognizes that design and development of spacecraft and payload instruments will have been completed in 1990, and only production, integration, and test activities will be underway in 1991. The FY 1991 funding requirement for the spacecraft contract was adjusted to correspond with the funding needed to support the reduced level of staffing required by the contractors during this stage of the program.

The budget request is consistent with the minimum required funding for this program based on NASA's latest official cost estimate.

QUESTION:

What was the contractor's original estimate of the cost of the GOES replacement program, and what is the current estimate?

ANSWER:

The original GOES I-K contract value was $203 million. When the GOES L and GOES M satellites were added, the contract value was increased to $276 million. At that time, NASA estimated that this contract would cost over $400 million.

The FY 1991 budget submission incorporates the latest official NASA estimate of the anticipated total cost for the program. The budget submission includes $587 million as the current contractor estimate.

QUESTION:

We understand that some consideration is being given to delaying the current launch date for the replacement GOES Satellite. What would be the reasons for such a delay, what would be the additional cost of such a delay, and when do you expect a decision on this matter?

ANSWER:

NOAA, NASA and Ford Aerospace are currently working toward launch of the GOES I satellite in June 1991. This is the earliest date that a fully qualified satellite can be made available for launch. Delays beyond June 1991 will only be considered based on operational and cost consideration and if it becomes clear that GOES I cannot be qualified in time to support a launch in that month. Any delay in the GOES I launch would cost approximately $4 million per month if other cost containment actions are not available.

MAJOR MAINTENANCE PROJECTS

QUESTION:

You are requesting an increase of $2,750,000 to begin major maintenance projects at NOAA facilities nationwide. How many facilities would this initiative include?

ANSWER:

This facilities maintenance initiative will address repairs and replacements only at Federally-owned, NOAA-held buildings. While NOAA operates at approximately 447 different installations in the United States, its territories, and a very few foreign countries, only 228 sites are owned by the Federal Government and held by NOAA. There are approximately 326 buildings of all sizes and condition at these sites.

QUESTION:

What plans, if any, does NOAA have to consolidate its facilities?

ANSWER:

$36.3 million was appropriated in FY 1990 to the GSA Public Building Fund to construct a new facility adjacent to the existing government-owned laboratories in Boulder, Colorado. This building will allow NOAA to consolidate laboratory and office operations currently in rented space elsewhere in Boulder with the operations at the existing Boulder Laboratory building site. It will also result in releasing space for the National Institute of Science and Technology (NIST) and other Commerce units in the existing buildings. The development of this project is being handled by the General Services Administration. The project is projected to be completed in 1993.

A major review of all facilities operated by the National Marine Fisheries Service is currently underway. It is designed to analyze and recommend realistic alternatives for potential realignments of the network of facilities operated by NMFS, including, but not limited to facility consolidations.

MARINE SERVICES

QUESTION:

You are requesting an increase of $4 million to initiate a modernization and upgrade program for the NOAA fleet and $2,010,000 and 25 positions to reactivate the NOAA ship DAVIDSON. Last year you proposed a deactivation of the DAVIDSON as well as other vessels. What has prompted this change in the use of the NOAA fleet?

ANSWER:

The average age of the ships in the NOAA fleet is 26 years. A service life extension program must be initiated now to ensure that the fleet is available to meet NOAA's needs in the future. The President's Budget requests funding to reactivate the DAVIDSON. Under the Administration's proposed harbor maintenance fee, the Davidson would be supported with funds derived through transfer from the Harbor Maintenance Trust Fund to the proposed Marine Waterways Trust Fund which will support the Nautical Charting program as well as other marine programs. The ship will collect data to update charts of coastal Alaska and other U.S. coastal areas.

QUESTION:

A recent GAO report indicated that NOAA believes that fleet support is currently inadequate for your needs and that the demand for additional "days at sea" will increase considerably over the next 20 years. Has NOAA adopted a plan, as recommended by GAO, to respond to this need?

ANSWER:

NOAA, under the direction of the Chief Scientist, is currently in the process of developing a plan to determine its needs for fleet support into the next century. A task force will address fleet requirements, size and mix, and alternatives.

GLOBAL CHANGE RESEARCH PROGRAM

QUESTION:

Your budget request includes a program increase of approximately $70 million for NOAA's share of the global change research program. What is the purpose of this multi-agency program?

ANSWER:

The goal of the U.S. Global Change Research Program is:

> TO ESTABLISH THE SCIENTIFIC BASIS FOR NATIONAL AND INTERNATIONAL POLICY MAKING RELATING TO NATURAL AND HUMAN-INDUCED CHANGES IN THE GLOBAL EARTH SYSTEM.

To achieve this goal, the participating agencies have established an integrated, Government-wide effort focused on three scientific objectives.

- o To establish an integrated, comprehensive long-term program of documenting the Earth system on a global scale;
- o To conduct a program of focused studies to improve our understanding of the physical, geological, chemical biological and social processes that influence Earth system processes and trends on global and regional scales; and
- o To develop integrated, conceptual, and predictive Earth-system models.

NOAA's Climate and Global Change Program is a vital component of the U.S. Global Change Research Program (USGCRP) and enables the Agency to bring its unique talents and special capabilities to bear on some of the highest scientific priorities identified by the Committee on Earth Sciences in the USGCRP Research Plan released in the summer of 1989. In support of the stated objectives of the USGCRP and with a special focus on providing reliable assessments and quantitative predictions of climate change and its regional implications, NOAA will pursue the following global change responsibilities:

- o DOCUMENTING GLOBAL CHANGE -- NOAA's planned activities will fill significant gaps in: (i) enhancing operational ocean observations; (ii) implementing a global sea-level monitoring network; (iii) monitoring changes in significant stratospheric constituents like ozone (joint project with NASA);

(iv) developing and testing new measurement technologies; (v) developing important climate and global change measurement products derived from operational satellite (metsats) and **in-situ** observations; (vi) conducting climate diagnostics and analytical studies; and (vii) establishing an effective NOAA and national data and information management system in support of the USGCRP.

o FOCUSED PROCESS STUDIES -- NOAA's research projects are aimed at some of the highest scientific priorities identified by CES and will complement those of the other participating agencies to provide significantly improved understanding of: (i) interannual climate variability through support of planned enhancements to the international Tropical Oceans-Global Atmosphere (TOGA) Program; (ii) the role of ocean circulation and dynamics in climate change, with particular emphasis on the importance of Atlantic Ocean circulation patterns on decadal climate change and the role of the ocean as a sink for atmospheric carbon dioxide; (iii) the sources, sinks, and behavior of greenhouse gases in the atmosphere through NOAA's Radiatively Important Trace Species (RITS) Program; (iv) the importance of dimethysulfide produced by marine organisms as cloud condensation nuclei; (v) clouds, water vapor, and the global hydrological cycle, including NOAA contributions to the evolving international Global Energy and Water Cycle Experiment (GEWEX); and (vi) the effect of climate and related stresses on marine ecosystems.

o CLIMATE MODELING AND PREDICTION -- In response to NOAA's longstanding environmental prediction and information services mission, the FY 1991 proposal ensures significant progress toward: (i) operational ocean modeling; (ii) near-term forecasting improvements to extend operational predictive capability on monthly and seasonal timescales; and (iii) the design and implementation of an effective multi-agency approach to significantly advance climate prediction capabilities on interannual and decadal timescales.

TEMPERATURE INCREASES

QUESTION:

What difference does a one to two degree change in the average temperature make?

ANSWER:

Past climate variations can put such a change in perspective. During the Little Ice Age, a period of protracted global cooling, frost fairs were held on the frozen Thames River in England during winter, and settlements in Greenland were lost to advancing glaciers. Estimated global cooling during this period was only about 1.5°C. Since 1860, a global warming of only 0.5°C. has occurred. A long-term global warming of several degrees is not within recent human experience, but its potential consequences, such as sea level rise, water supply shifts or agricultural impacts, could be quite significant.

NOAA's program will not affect climate change but rather will provide the information to make the best policy decisions on adapting or responding to climate change. It is crucial to know how big the warming will be, when it will occur, and where the regional effects will be most severe. This Program is one of NOAA's highest priorities because the effects of even a one-to-two-degree warming in the next century could be significant as could uncessary or poorly designed mitigation efforts. The cost of developing and making available to national decisionmakers the best possible predictions is modest in comparison.

COASTAL OCEAN SCIENCE

QUESTION:

You're also requesting a program increase to continue the FY 1990 initiative in Coastal Ocean Science. What information do you hope to gain from this multi-year research program, and how much will it cost?

ANSWER:

The FY 1991 request of $17.4 million is $11 million above FY 1990 enacted amount. The need for this modest increase is clear. Over the next decade, federal and state governments will make decisions about the use of coastal and Great Lakes waters and their resources that will determine whether this economically and environmentally important area will continue to be a valuable national resource that provides important goods and services to the Nation.

For example, billions of dollars of both public and private funds will continue to be invested to enact legislation and develop regulations; develop and implement resource management plans; install and operate pollution control equipment and other measures; conduct waste disposal operations; modify the physical environment; monitor and respond to emergency events (such as hurricanes and coastal flooding) and assess and compensate for their damages.

The information currently available to make these decisions remains incomplete and often inadequate and inaccessible to appropriate levels of government and the private sector. As a result, most decisionmakers and scientists continue to address specific problems in selected coastal and Great Lakes areas on a piece-meal basis.

These investments in NOAA will improve the basis upon which the Nation makes its environmental decisions. NOAA's program increases will provide for comprehensive attacks on critical environmental problems and identify and protect coastal resources today and in the future. The programs supported by the increase have been reviewed and developed strategically to both confront today's problems and to invest in the future by putting in place programs and infrastructure to deal with tomorrow's challenges.

WEATHER SERVICE MODERNIZATION

QUESTION:

The NOAA budget includes increases for continuation of the program to modernize the National Weather Service's equipment (NEXRAD and related units). Will the Department maintain all existing public warning and forecast stations until the new stations are operational?

ANSWER:

The FY 1991 Budget includes funding to maintain existing public warning and forecast stations. When the new Weather Forecast Offices assume forecast and warning services with no deterioriation of existing services, current Weather Service Offices will be consolidated.

LANDSAT SIX

QUESTION:

The NOAA budget also includes additional funds for the final part of the LANDSAT 6 remote sensing program. What are the recommendations of the Department to the National Space Council concerning the options for continuing LANDSAT-type data after LANDSAT 6?

ANSWER:

The Departments of Commerce and Defense have jointly developed a Landsat Implementation Options Study for OMB and the National Space Council. This study outlines a series of technical and management/funding alternatives for defining a follow-on land remote sensing program after Landsat 6. The Department has not provided specific recommendations to the National Space Council concerning the alternatives.

GOES REPLACMENT PROGRAM

QUESTION:

I understand that the replacement program for the GOES meteorological satellite will cost some $400 million more than the contractor's original estimate. What is the status of the replacement program, and what action has the Department taken in light of these horrific cost increases?

ANSWER:

The original GOES I-K contract value was $203 million. When GOES L and GOES M were added, the contract value was increased to $276 million. At that time, NASA estimated this contract would cost $403 million; this amount was included in the FY 1988 President's Budget. The cost for the GOES I-M contract included in the FY 1991 budget submission is $606 million.

NOAA, NASA and Ford Aerospace are currently working toward launch of the GOES I satellite in June 1991.

To constrain these costs to the greatest extent possible, NOAA has taken the following actions.

1. NOAA has continued to keep pressure on NASA and the GOES contractor during frequent senior management meetings, in which program status is reviewed and program direction defined.

2. Through a small resident staff at NASA Goddard, NOAA observes and has technical input to most NASA technical contract-related activity.

3. For all purchase orders and task orders issued relative to the contract and supporting activities, NOAA reviews each action in advance.

4. NOAA participates as an observer in all design reviews and other program reviews relative to the contract held at NASA or at contractor facilities.

5. NOAA reviews NASA cost estimates prepared twice each year (NASA program operating plans) and provides budgetary guidance to NASA consistent with available NOAA funds.

6. NOAA participates in Senior Management Reviews held quarterly. These reviews began in 1987, when NOAA expressed strong concern about the status of the program and asked that NASA pay more, high-level attention to the GOES program.

7. NOAA directed NASA to restructure the GOES I-M contract to a fixed-price type contract at the earliest practical date.

8. NOAA developed procedures to work with NASA in making limited performance and performance testing compromises if necessary to reduce cost and improve the probability of obtaining the launch of GOES I at the earliest practical date.

QUESTIONS SUBMITTED BY MR. ALEXANDER

NMFS AQUACULTURE

QUESTION:

For each year 1980 through 1990, please identify the funding appropriated for aquaculture activities at Stuttgart, Arkansas, by total appropriated, total retained at National Marine Fisheries Service, and total allocated to Stuttgart. Please identify construction funding separate from program funding.

ANSWER:

($ in thousands)

FY	Ops.	Constr	Retained	Total by NMFS
80	$157	...	0	$157
81	157	...	0	157
82	157	...	0	157
83	157	...	0	157
84	170	...	0	170
85	375	...	5	375
86	353	...	0	353
87	375	$50	5	425
88	346	937	0	1,283
89	349	937	0	1,283
90	550	1,500	0	2,050

AGRICULTURAL WEATHER

QUESTION:

Agriculture is a basic and essential element of the nation's economy. Farming is extraordinarily vulnerable to weather changes. The National Weather Service agricultural weather services are very valuable and useful to Arkansans and other Americans who produce the nation's food and fiber. Why does the Department consider its responsibility to be responsive to the needs of land-based agricultural producers less important than its duty to respond to the needs of, for instance, marine-based commercial and recreational activities?

ANSWER:

The National Weather Service is responsible for safety-related warning and forecast services that benefit the public as a whole. The Agricultural Weather Services Program benefits a specialized segment of the economy at the expense of the general taxpayer. Furthermore, sufficient skills and expertise exist in the private sector to competitively offer the current services provided the agricultural community by the Federal funded from user fees in the FY 1991 Budget. Beneficiaries of specialized marine services will fund the program.

The National Weather Service (NWS) will continue to issue basic public warnings and forecasts, as well as collect and disseminate observations to cover all areas of the country. This information benefits agricultural operations and is the basis upon which state and private sector entities provide enhanced agricultural weather products.

NEXRAD INSTALLATIONS

QUESTION:

On a year-by-year basis, please identify the geographic locations at which NEXRAD doppler radar installations will be made and the currently scheduled dates for those installations.

ANSWER:

The schedule that was used to exercise the full-scale production option of the Unisys contract, as well as the limited production schedule, is under review. Installation priority is subject to change due to termination of the FAA Interim Terminal Weather Radar (ITWR) development program. Termination of the ITWR NEXRAD development effort does not constitute cancellation of the 17 ITWR redundant NEXRAD units but a restructuring of the delivery priorities for the ITWR NEXRAD units originally planned in the limited and full-scale production deployment schedule. The schedule for NEXRAD deliveries is being revised to reflect this change in priorities. The revised schedule for limited production and the schedule for full-scale production should be completed by the end of April at which time it will be forwarded to Congress.

QUESTION:

Please identify the U.S. Government departments, agencies and other entities which obtain, via NOAA, information or services acquired through the operations of the polar orbiting satellites and the basis on which payment for these is made to NOAA.

ANSWER:

U.S. users of polar information and services include the U.S. Departments of Defense, Agriculture, Commerce, Energy, and Interior. Additional users include state governments, universities, and private sector users. The total number of users is in the thousands. NOAA user services and associated user information listings for the NOAA polar and geostationary satellites are maintained in three general categories.

Direct broadcast from the satellite: NOAA polar orbiting satellites transmit environmental data from space which can be received by any user who has the appropriate ground-receiving antenna and associated electronics. Since the beginning of both the geostationary and polar programs these broadcasts have been provided at no charge to U.S. and international users. This data sharing helps to assure U.S. access to needed environmental data from all other nations. These global data are important in the preparation of U.S. weather forecasts as well as for long-range global climate change studies.

Near real-time delivery after ground-based reception and processing by NOAA: These data are provided primarily to the National Weather Service and other elements of NOAA for environmental forecasting, climate analysis, and research. In addition, some of these near real-time data are made available to the U.S. Navy, the U.S. Air Force and to international users in exchange for other near real-time environmental data important to NOAA. No charges are made for these data. The telephone line distribution system which provides centrally produced satellite images serves NOAA's National Weather Service field offices throughout the United States. For this service, called GOES-TAP, NOAA charges external users a nominal initial fee of $1,000 and, thereafter, $100 annually.

Retrospective delivery after ground-based reception and processing by NOAA: These are the same data produced in near real-time and stored in NOAA's environmental data centers. Charges are made to users to cover the incremental cost of providing the data they have requested. The major users are U.S. Government agencies (70 percent), the U.S. private sector (17 percent), and foreign governments (13 percent).

QUESTION:

Please identify the foreign governments which obtain, via NOAA, information or services acquired through the polar orbiting satellites and the basis on which payment for these is made to NOAA.

ANSWER:

Some of the over 120 countries using this information and service include Algeria, American Samoa, Argentina, Australia, Austria, Bahamas, Bahrain, Barbados, Belgium, Belize, Brazil, Cayman Is., Brunei, Burma, Cameroon, Canada, Chile, Colombia, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Ethiopia, Federal Republic of Germany, Fiji, Finland, France, Greece, Greenland, Guadeloupe, Guatemala , Guyana , Honduras, Hong Kong, Hungary, Iceland, Iraq, Ireland, Israel, Italy, Japan, Jordan, Korea, Madagascar, Mexico, Mongolia, Morocco, Nepal, Netherlands, Netherlands Antilles, New Zealand, Northern Ireland, Norway, Pakistan, Panama, Paraguay, People's Republic of China, Peru, Philippines, Poland, Portugal, Romania, Saudi Arabia, Scotland, Seychelles, Singapore, South Africa, Spain, Sultantate of Oman, Sweden, Switzerland, Taiwan, Tanzania, Thailand, Trinidad, United Kingdom, Uruguay, and Venezuela. Our user services and associated user information listings for the polar and geostationary satellites for foreign governments are maintained in two general categories.

Direct broadcast from the satellite: NOAA polar orbiting satellites transmit environmental data from space which can be received by any user who has the appropriate ground-receiving antenna and associated electronics. Since the beginning of both the geostationary and polar programs these broadcasts have been provided at no charge to U.S. and international users. This data sharing helps to assure U.S. access to needed environmental data from all other nations. These global data are important in the preparation of U.S. weather forecasts as well as for long-range global climate change studies.

Retrospective delivery after ground-based reception and processing by NOAA: These are the same data produced in near real-time and stored in NOAA's environmental data centers. Charges are made to users to cover the incremental cost of providing the data they have requested. Historically, $10K year (13 percent) of NOAA's retrospective data sales have been to foreign governments.

QUESTION:

Please identify the U.S. government departments, agencies, and other entities which obtain, via NOAA, information or services acquired through the operation of the geostationary satellites and the basis on which payment for these are made to NOAA.

ANSWER:

U.S. users of geostationary information and services includes the U.S. Department of Defense, Agriculture, Commerce, Energy, and Interior. Additional users include state governments, universities, and private sector users. The total number of users is in the thousands. Our user services and associated user information listings for the polar and geostationary satellites are maintained in three general categories.

Direct broadcast from the satellite: NOAA polar orbiting satellites transmit environmental data from space which can be received by any user who has the appropriate ground-receiving antenna and associated electronics. Since the beginning of both the geostationary and polar programs these broadcasts have been provided at no charge to U.S. and international users. This data sharing helps to assure U.S. access to critically needed environmental data from all other nations. These global data are important in the preparation of U.S. weather forecasts as well as for long-range global climate change studies.

Near real-time delivery after ground-based reception and processing by NOAA: These data are provided primarily to the National Weather Service and other elements of NOAA for environmental forecasting, climate analysis, and research. In addition, some of these near real-time data are made available to the U.S. Navy, the U.S. Air Force and to international users in exchange for other near real-time environmental data important to NOAA. No charges are made for these data. The telephone line distribution system which provides centrally produced satellite images serves NOAA' s National Weather Service field offices throughout the United States. For this service, called GOES-TAP, NOAA charges external users a nominal initial fee of $1,000 and, thereafter, $100 annually.

Retrospective delivery after ground-based reception and processing by NOAA: These are the same data produced in near real-time and stored in NOAA's environmental data centers. Charges are made to users to cover the incremental cost of providing the data they have requested. The major users are U.S. Government agencies (70 percent), the U.S. private sector (17 percent), and foreign governments (13 percent).

QUESTION:

Please identify the foreign governments which obtain, via NOAA, information acquired through the geostationary satellites and the basis on which payment for these are made to NOAA.

ANSWER:

Some of the countries using this information and services include Algeria, American Samoa, Argentina, Australia, Austria, Bahamas, Bahrain, Barbados, Belgium, Belize, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Denmark, Dominican Republic, East Germany, Ecuador, El Salvador, Ethiopia, Federal Republic of Germany, Fiji, France, French Guiana, French Guyane, French West Indies, West Germany, Guatemala, Guyana, Haiti, Hong Kong, Hungary, Israel, Italy, Japan, Jamaica, Kenya, Liberia, Malagasy Republic, Mexico, Morocco, Netherlands, Netherlands Antilles, New Zealand, Paraguay, Peru, Poland, Puerto Rico, Panama, Rep. Du Niger, Rep. of China, Rep. of Korea, Rep. De Cabo Verde, Rep. of Singapore, Seychelles, South Africa, Spain, Sultanate of Oman, Sweden, Switzerland, Tahiti, Trinidad, Turkey, United Kingdom, Uruguay, United Arab Emirates, and Venezuela. Our user services and associated user information listings for the polar and geostationary satellites are maintained in three general categories.

Direct broadcast from the satellite: NOAA polar orbiting satellites transmit environmental data from space which can be received by any user who has the appropriate ground-receiving antenna and associated electronics. Since the beginning of both the geostationary and polar programs these broadcasts have been provided at no charge to U.S. and international users. This data sharing helps to assure U.S. access to critically needed environmental data from all other nations. These global data are important in the preparation of U.S. weather forecasts as well as for long-range global climate change studies.

QUESTIONS SUBMITTED BY MR. EARLY

COASTAL OCEAN INITIATIVE

QUESTION:

Would you briefly summarize the goals of the three program areas of the coastal ocean initiative?

ANSWER:

Improve predictions of coastal ocean pollution and degradation - to predict change in the quality of the coastal environment and its living marine resources to help prevent further habitat degradation and restore damaged habitats.

Improve conservation and management of living marine resources - to predict the influence of fishing, habitat degradation, and natural forces on living marine resources to ensure optimal productivity for today and in the future and to help establish a good balance between economic and ecologic productivity.

Improve protection of life and property in coastal areas - to predict the occurrence of natural physical impacts, for both short-term warnings and long-term planning to prevent or minimize adverse effects of storms and erosion on coastal communities.

QUESTION:

The budget justification indicates that NOAA is integrating base programs with this initiative. Would you explain how this is being done? Are existing programs or activities being absorbed within this initiative?

ANSWER:

The Coastal Ocean Program (COP) is directed out of NOAA headquarters through the Coastal Ocean Program Office within the Office of the Chief Scientist. The projects funded through the Coastal Ocean Science line item are thoroughly reviewed and analyzed by the Coastal Ocean Council (comprised of representatives from all NOAA line offices) and the Assistant Administrators, with final approval by the Under Secretary. These projects are implemented by the appropriate NOAA line office.

COP funds are used to both support and strengthen ongoing NOAA programs (e.g. National Status and Trends, Ocean Assessments, Sea Grant, CZM) in the context of COP goals and to initiate new projects in response to National needs (e.g., nutrient over-enrichment, wetlands and seagrass habitat research and restoration, CoastWatch). However, even in the cases of new program emphasis, COP funds and program management processes use existing NOAA

programs, infrastructure, and interagency and academic community relationships to implement the programs. The mechanisms of COP program management allow NOAA to capitalize on strengths and talents throughout the agency without reorganizing and creating new formal structures.

QUESTION:

For FY 1991, NOAA is requesting an increase of $11 million for the coastal ocean initiative. Why is this increase necessary and how will these additional funds be used?

ANSWER:

The FY 1991 requested increase of $11 million is only $5 million above the President's FY 1990 request. The need for this modest increase is clear. Over the next decade, federal and state governments will make decisions about the use of coastal and Great Lakes waters and their resources that will determine whether this economically and environmentally important area will continue to be a valuable national resource that provides important goods and services to the Nation.

For example, billions of dollars of both public and private funds will continue to be invested to enact legislation and develop regulations; develop and implement resource management plans; install and operate pollution control equipment and other measures; conduct waste disposal operations; modify the physical environment; monitor and respond to emergency events (such as hurricanes and coastal flooding) and assess and compensate for their damages.

The information currently available to make these decisions remains incomplete and often inadequate and inaccessible to appropriate levels of government and the private sector. As a result, most decisionmakers and scientists continue to address specific problems in selected coastal and Great Lakes areas on a piece-meal basis.

These investments in NOAA will improve the basis upon which the Nation makes its environmental decisions. NOAA's program increases will provide for comprehensive attacks on critical environmental problems and identify and protect coastal resources today and in the future. The programs supported by the increase have been reviewed and developed strategically to both confront today's problems and to invest in the future by putting in place programs and infrastructure to deal with tomorrow's challenges.

QUESTION:

How much is NOAA allocating for this program in FY 1990?

ANSWER:

NOAA's Coastal Ocean Program budget in FY 1990 is $6.4 million. This will go towards both enhancing existing programs (such as National Status and Trends, Ocean Assessments, and Coastal Zone Management) and initiating new activities to help meet program goals.

QUESTION:

What portion of FY 1990 and FY 1991 funds will be used for intramural and extramural activities ?

ANSWER:

In both FY 1990 and FY 1991, NOAA anticipates about 30-40% of the Coastal Ocean Program research funds will be used for extramural activities, primarily academic research.

QUESTION:

What process or procedure does NOAA use to award funds for activities conducted extramurally ?

ANSWER:

NOAA's Coastal Ocean Program awards funds for extramural activities based upon the results of a rigorous scientific peer review of the proposals submitted.

COASTAL ZONE MANAGEMENT

QUESTION:

The President's budget proposes a $4.9 million decrease for the coastal zone management program. Why are you proposing this decrease and what impact will it have on State Coastal Zone Management programs?

ANSWER:

We anticipate that enactment of the Administration's CZM reauthorization proposal will result in stronger state programs as states are encouraged to allocate more through the competitive nature of the new grant program.

QUESTION:

What changes are being proposed for the CZM Reauthorization?

CZM funds are currently awarded on a formula basis. I understand that NOAA is proposing that CZM funds be awarded on a competitive grant basis. How would this work?

What impact would a shift to competitive grants have on state CZM programs?

What evidence does NOAA have that competitive grants will result in better management of state coastal resources?

ANSWER:

It is anticipated that competitive grants will result in better management of state coastal resources by ensuring a better allocation of funding. Twenty-nine states, or 94 percent of the Nation's coastline have operational programs that are federally approved; therefore, under the competitive grants program, states will be encouraged to concentrate greater efforts on meeting a set of high-priority national objectives. These national objectives will be developed and reviewed by an independent team of specialists from various specialties.

States will compete for grant funds. The competitive process will cause states to enhance their current programs and to strive for excellence.

SUPERCOMPUTER UPGRADE

QUESTION:

What is the status of the supercomputer upgrade project?

ANSWER:
